[1] *Composition—percent:*
5 and 3 cents (nickel)—copper, 75; nickel, 25.
5 cents (silver)—copper, 56; silver, 35; manganese, 9.
2 and 1 cent (bronze)—copper, 95; tin and zinc, 5.
1 and ½ cent (copper)—pure copper.
1 cent (nickel)—copper, 88; nickel, 12.
1 cent (zinc-steel)—steel, with obverse and reverse sides covered with a coating of not to exceed 0.001 inch zinc.
1 cent (copper-zinc)—copper 95; zinc 5.

[2] 5 cents (silver) coined, under provisions of act of Mar. 27, 1942, as amended by act of Dec. 28, 1945, from Oct. 1, 1942, until expiration of authority Dec. 31, 1945.

[3] 3-cents (nickel) discontinued by act of Sept. 26, 1890.

[4] 2-cents (bronze) discontinued by act of Feb. 12, 1873.

[5] Proclamation of the President in conformity with act of Mar. 3, 1795.

[6] Copper cent and half cent discontinued by act of Feb. 21, 1857.

[7] Nickel cent discontinued by act of Apr. 22, 1864.

[8] Zinc-steel cent coined, by orders of Secretary of the Treasury dated Dec. 23, 1942, and May 15, 1943, pursuant to act of Dec. 18, 1942, during calendar year 1943.

[9] Copper-zinc cent coined, by order of Secretary of the Treasury of Dec. 16, 1943, pursuant to act of Dec. 18, 1942, from Jan. 1944 until expiration of authority Dec. 31, 1946.

Note.—Additional coinage information, by mints and calendar years, is available in pamphlet form entitled "Domestic Coin Manufactured By Mints of the United States". This pamphlet is for sale by the Superintendent of Documents, U. S. Government Printing Office, Washington 25, D. C., at a cost of 15 cents.

WORLD MONETARY STATISTICS

The statistics of foreign countries on coinage systems, production, consumption, and stocks of gold and silver, published annually in the reports of the Director of the United States Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the completed reports are forwarded directly to the Director of the Mint.

Information submitted to the interrogatories in general is published herein as received, with the addition of equivalents. In the absence of official returns the most reliable data available are used in compiling world statistics.

Tables include the following:

1. Gold and silver monetary stocks of principal countries of the world at end of calendar year 1950.
2. Coinage mints of the world in operation during 1950.
3. Coinage of nations during the year ended December 31, 1950.
4. Coinage of Australia during the year ended December 31, 1949 (see previous year's report for coinage of other nations during 1949).
5. Silver coins withdrawn from active circulation in various countries of the world during the year ended December 31, 1950.
6. Gold and silver in the form of old plate, jewelry, and other old material returned from use in the industrial arts by being deposited with the monetary authority in various countries of the world during 1949 and 1950.
7. Estimated quantity of gold and silver issued for use or used in the industrial arts in various countries of the world during 1949 and 1950.
8. Characteristics of coins in circulation.
9. World production of gold, 1945–50, by countries, in fine ounces (complied by the Bureau of Mines, U. S. Department of the Interior).
10. World production of silver, 1945–50, by countries, in fine ounces (compiled by the Bureau of Mines, U. S. Department of the Interior).

Gold and silver monetary stocks of principal countries of the world at end of calendar year 1950 (subject to revision)

[Gold reported on quantity basis, in troy ounces, grams, or kilograms and converted to United States money at rate of $35 per fine ounce (1 United States dollar is legally defined as 15 5/21 grains of gold 9/10 fine). Silver reported face amount converted to United States money at exchange rate, or reported quantity valued at New York average market rate for December 1950, $0.80 per ounce 999/1000 fine]

1 kuru	2.5	75 copper, 25 nickel	18.5
Do	2.25	70 copper, 30 zinc	18

Turkish cupro-nickel coins are being withdrawn.

UNION OF SOUTH AFRICA

[Coins in active circulation at end of December 1950]

Crown	28.27590	800 silver, 200 copper	38.7
Half crown	14.13795	do	32.2
Florin	11.31036	do	28.6
Shilling	5.65518	do	23.6
Sixpence	2.82755	do	19.3
Threepence	1.41379	do	16.2
Penny	9.44984	95 copper, 4.5 zinc, 0.5 tin	30.9
Halfpenny	5.66990	do	25.5
Farthing	2.83495	do	20.1

South African coins also circulate in Basutoland, Bechuanaland, South West Africa, and Swaziland.

UNITED KINGDOM OF GREAT BRITAIN AND NORTHERN IRELAND

[Coins in active circulation at end of December 1950]

Imperial coins			
Crown	28.27590	500 silver, 400 copper, 50 nickel, 50 zinc; and 75 copper, 25 nickel.	38.7
Half-crown	14.13795	do	32.3
Florin	11.31036	do	28.5
Shilling	5.65518	do	23.6
Sixpence	2.82759	do	19.4
Threepence	1.41379	do	16.3
Do (12 sided)	6.80388	79 copper, 20 zinc, 1 nickel	{21.1 / 21.9
Penny	9.44984	95.5 copper, 3 tin, 1.5 zinc	30.9
Halfpenny	5.66990	do	25.5
Farthing	2.83495	do	20.2
Maundy Money			
Fourpence	29.09090	925 silver, 75 copper	17.6
Threepence	21.81818	do	16.3
Twopence	14.54545	do	13.4
Penny	7.27272	do	11.2

Maundy Money does not actively circulate, but is minted for distribution of the Royal Maundy at Westminster Abbey on Maundy Thursday.

Silver coins (except Maundy Money) are no longer coined, but are in process of withdrawal from circulation, and are being replaced by the cupro-nickel coins authorized under the coinage act of 1946.

British Imperial coins are legal tender in the following territories: Jamaica (including Turks and Caicos Islands and Cayman Islands), Bahamas, Barbados, Bermuda, British Guiana, Dominica, Falkland Islands, Grenada, Leeward Islands, Malta, St. Lucia, St. Vincent, Trinidad and Tobago, and Gibraltar.

URUGUAY

[Coins in active circulation at end of December 1950]

Denomination	Gross weight in grams	Composition (proportion of metals)	Diameter in millimeters
1 peso	9	720 silver, 280 copper	27
50 centesimos	7	do	24
20 centesimos	3	do	18.5
10 centesimos	6	91 copper, 9 aluminum	25
5 centesimos	5	75 copper, 25 nickel	23
Do	5	95.5 copper, 3 tin, 1.5 zinc	23
2 centesimos	3.5	75 copper, 25 nickel	20
Do	3.5	95.5 copper, 3 tin, 1.5 zinc	20
1 centesimo	2	75 copper, 25 nickel	17

VATICAN CITY

[Coins in active circulation at end of December 1950]

100 Vatican lire	5.1966	900 gold	20.7
10 Vatican lire	3	Aluminum-magnesium-mangnese	29
5 Vatican lire	2.5	do	26.7
2 Vatican lire	1.75	do	24.1
1 Vatican lira	1.25	do	21.6

The 100 Vatican lire denomination is not coined for circulation.

VENEZUELA

[Coins in active circulation at end of December 1950]

5 bolivares	25	900 silver, 100 copper	37
2 bolivares	10	835 silver, 165 copper	27
1 bolivar	5	do	23
½ bolivar	2.5	do	18
¼ bolivar	1.25	do	16
12½ centimos	5	75 copper, 25 nickel	23
5 centimos	2.5	do	19

[1] Figures used derived in part from American Bureau of Metal Statistics. For some countries accurate figures are not possible to obtain owing to clandestine trade in gold. Data not available for Austria, Bulgaria, Germany, Norway, Thailand, and Yugoslavia; estimates included in the total. In addition, production in Cyprus, Indochina, and Papua was negligible.

[2] Refinery production. Excludes production of the Philippines.

[3] Imports into United States.

[4] Exports.

[5] Estimate.

[6] Data not available; estimate included in total.

[7] Output from U. S. S. R. in Asia included with U. S. S. R. in Europe.

[8] Figure published by Director of the Mint, representing gold of Philippine origin refined but not necessarily mined during the year.

[9] Includes Ruanda-Urundi.

[10] Included is yield from Nkana mine refinery slimes accumulated during the war: 6,594 ounces in 1946, 547 in 1947, 999 in 1948, 972 in 1949, and 1,296 in 1950.

World production of silver, 1945–50, by countries, in fine ounces [1]

PART I

REPORT OF THE DIRECTOR ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1932

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 12, 1932.

SIR: In compliance with the provisions of section 345, Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1932, being the sixtieth annual report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this bureau upon the production and consumption of the precious metals in the United States for the calendar year 1931.

OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the Mint Service

During the fiscal year ended June 30, 1932, 10 mint-service institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which makes large sales of fine gold bars; mints at New Orleans and Carson City conducted as assay offices; and assay offices at Boise, Helena, Seattle, and Salt Lake City. The six last-named institutions are, in effect, bullion-purchasing agencies for the large institutions and also serve the public by making assays of ores and bullion. Electrolytic refineries are operated at the New York, Denver, and San Francisco institutions.

Coinage

During the past fiscal year the coinage executed was again very small in number of pieces, 26,801,500 domestic coins having been made with a total face value of $111,999,580, the value being high by reason of the gold coinage amounting to $111,015,000. The silver coinage made had face value of $803,000, and nickel and bronze coin $181,580.

Coins executed for foreign governments totaled 9,532,316 pieces of silver and nickel, all made at the Philadelphia Mint, as compared with 2,355,120 pieces of gold and silver made during the prior fiscal year.

Grand totals of pieces executed compare as follows: 1932, 36,333,816; 1931, 100,591,620.

Bullion Deposit Transactions

The number of bullion deposits, each one of which must be separately melted, assayed, computed, etc., greatly increased during the fiscal year just closed, to 54,105 from last year's 36,098. Many

small parcels have been received from individual placer miners, doubtless thus working while more remunerative employment is unavailable, and many more small parcels of secondary materials—old jewelry, plated ware, etc.—have been returned to monetary use. This increase of transactions is continuing into the new fiscal year and promises to reach new high records. Very greatly increased gold imports arrived at the San Francisco Mint.

Gold Operations

Gold acquired by the Government at the several mint-service institutions during the fiscal year 1932 totaled $413,057,073.88; United States gold coin received by the mints for recoinage amounted to $2,945,294.55; transfers of gold between mint offices totaled $11,692,940.68; the aggregate amount of gold received by the several mint-service institutions during the fiscal year 1932 was $427,695,309.11, which compares with $224,713,639.03 during the prior year.

Silver Operations

Receipts of purchased silver during the fiscal year 1932 totaled 1,051,030.55 fine ounces, the average cost of which was 28.71 cents per ounce, total cost being $301,737.75. Silver received in exchange for bars bearing the Government stamp totaled 1,578,487.34 fine ounces; United States silver coin received for recoinage totaled 4,937,147.47 fine ounces, the recoinage value being $6,825,156.35; silver deposited in trust by other governments totaled 3,259,843.03 fine ounces; and transfers between mint-service offices totaled 735,841.89 fine ounces, making the aggregate quantity of silver received by the several mint-service offices during the fiscal year 11,562,350.28 fine ounces, as compared with 7,851,899.24 ounces during the prior year.

The New York market price of silver during the fiscal year ended June 30, 1932, averaged $0.29404; the lowest price was $0.269375, on June 30, 1932, and the highest price $0.375625, November 10, 1931.

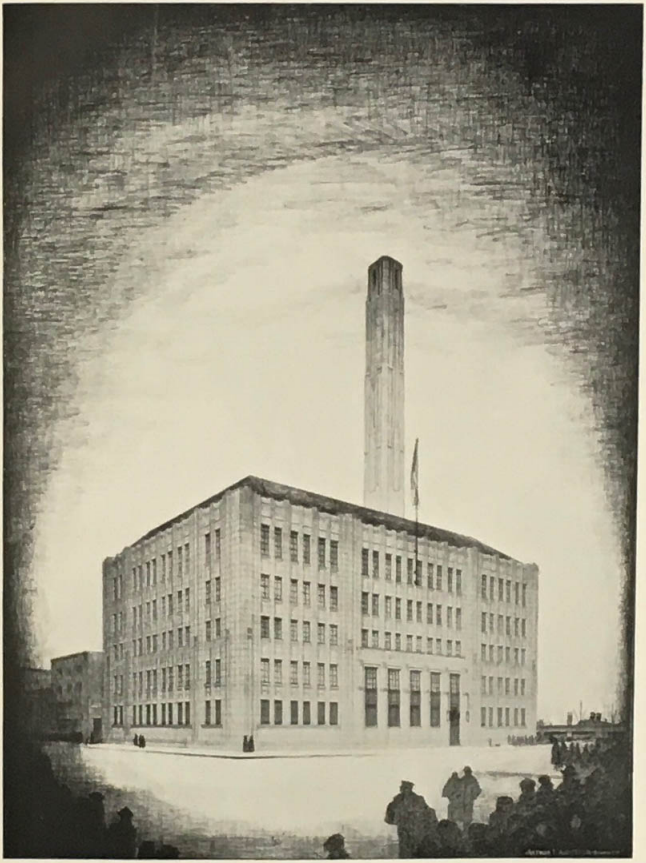
Refineries

The refineries at the San Francisco and Denver mints produced 1,602,238 fine ounces (54.9 tons of electrolytically refined gold during the fiscal year ended June 30, 1932, which compares with 1,365,444 fine ounces (46.8 tons) in the prior fiscal year; and 1,855,387 fine ounces electrolytically refined silver (63.6 tons), which compares with 1,811,491 fine ounces (62.1 tons) in the prior year. The New York electrolytic refinery did not operate during the past year.

The stock of gold and silver in unrefined bullion on hand increased during the past year by about 136 tons to 665 tons as compared with the prior year's increase of about 89 tons.

Housing

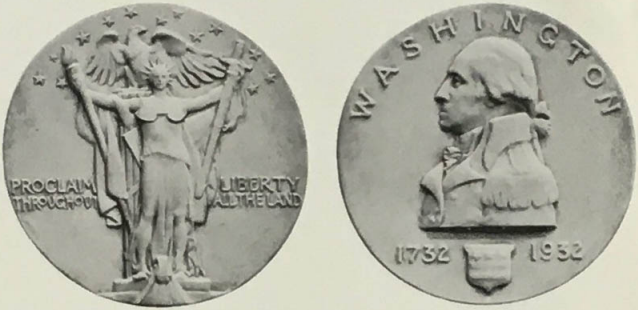
The new building for the New York assay office was practically ready for occupancy at the end of the fiscal year. It is located on the East River water front at Old Slip, South, and Front Streets, about six blocks from the old Wall Street site which has been sold by the



UNITED STATES ASSAY OFFICE BUILDING, 32 OLD SLIP, NEW YORK

ERECTED 1931–32.

4—1



WASHINGTON BICENTENNIAL MEDAL

NEW DESIGN QUARTER DOLLAR

Government. It covers an area of about 195 by 142 feet, is five stories in height, with much greater floor area than the old building provided. The building is of steel and concrete, faced with granite, and with a granite faced smokestack 160 feet in height. The first floor is arranged for the receiving of bullion deposits from the public, for melting the deposits, for stamping refined bars, for the cashier, superintendent of building, and with a packing or shipping room; a shipping platform is capable of caring for four or five armored trucks within the gate-enclosed premises. There is also a cashier's vault and a bar-department vault, while the main vault, approximately 31 by 70 feet, is carried up through the several floors, and has a mezzanine at the first story, also a storage compartment below the first-floor level. The second floor is arranged for the general offices, including those of the superintendent; the assay department; the offices of the melting and refining department, with bullion vault, make-up room, laboratory, etc. The third floor will not now be used by the assay office. The fourth floor will be occupied by the gold-refining and silver-refining divisions, the bullion storage vault, machine shop, etc. The fifth floor has, in addition to the bullion-storage vault, a melting room, laboratory, storekeeper's quarters, etc., while general storage space will be available in the attic.

The Seattle assay office moved, in February, 1932, from the rented building at 617 Ninth Avenue which it had occupied since the office was established in 1898, to its quarters on the top floor of the new immigration station and assay office building at Fifth Avenue South and Airport Way. The entire top floor was specially arranged for the assay office.

The old mint building at New Orleans was vacated by the New Orleans Mint (operated as an assay office only) in June, 1931. Much smaller but adequate quarters were made available in the custom-house, where the mint is now located, and the large old mint building was turned over to another Government activity.

The Boise assay office is soon to occupy quarters specially arranged for it in a new Federal building, and the old building, set in a park a block square, will be turned over to the Forest Service.

New Design Coin

A new design for the quarter dollar was authorized by the act of March 4, 1931, as an incident of the bicentennial celebration of the birth of George Washington. A portrait head of Washington is the principal feature of the design, which is by the sculptor John Flanagan. On the reverse is an eagle with wings spread, standing on a bundle of arrows; beneath, two sprays of olive are shown. Inscriptions are those required by law to be on coins.

Washington Bicentennial Medal

The Washington bicentennial medal authorized in the congressional act of February 23, 1931, providing for commemorating the two-hundredth anniversary of the birth of George Washington, was executed at the Philadelphia Mint. The portrait bust of George Washington is in military uniform, and a shield bearing his coat of arms separates the years 1732–1932. On the reverse appears a full-

length figure symbolizing Liberty, standing on the prow of the Ship of State, with arms outstretched, in the right hand a torch and in the left a sword; above is an eagle with wings spread, and 13 stars scattered in the field. The inscription on the obverse is "Washington"; on the reverse, "Proclaim liberty throughout all the land." The design is by Laura Gardin Fraser, sculptor.

Stock of Coin and Monetary Bullion in the United States

On June 30, 1932, the estimated stock of domestic coin in the United States was $2,765,212,687, of which $1,793,828,454 was gold, $540,007,911 standard silver dollars, $304,882,996 subsidiary silver coin, and $126,493,326 minor coin.

The stock of gold bullion in the mints, assay offices, and Federal reserve banks on the same date was valued at $2,124,767,363, a decrease during the year of $1,132,720,046; the stock of silver bullion was 21,721,223.09 fine ounces, an increase of 5,397,519.59 fine ounces.

Production of Gold and Silver

Domestic gold production during the calendar year 1931 was $49,527,200, as compared with $47,247,600 in 1930. The output was about 49 per cent of that for the record year 1915, when the total was $101,035,700.

Silver of domestic production during 1931 totaled 30,932,050 ounces, valued at $8,970,294; this compares with 50,748,127 ounces, valued at $19,538,029, for 1930, and with the record production of 1915, 74,961,075 fine ounces, valued at $37,397,300.

Industrial Consumption of Gold and Silver

Gold consumption in the industrial arts during the calendar year 1931 is estimated at $29,157,865, of which $5,930,780 was new material.

Silver used in the arts is estimated at 33,682,119 fine ounces, of which 24,335,838 fine ounces was new material.

As compared with the prior year, silver consumption was about 2,700,000 ounces less and gold consumption about $13,500,000 less.

Import and Export of Domestic Gold Coin

The net import of domestic gold coin during the fiscal year ended June 30, 1932, according to statistics compiled by the Bureau of Foreign and Domestic Commerce, was $32,675,722; during the prior fiscal year there was net import of $213,742,550. During the 18 fiscal years 1915–1932, since the opening of the World War, there has been a net export of $776,210,798. Since 1870 the net export of domestic gold coin has been $1,653,859,862, as per tabulation by fiscal years, which may be found in another section of this volume.

Appropriations, Expenses, and Income

Appropriations available for mint service during the fiscal year 1932 totaled $1,731,920, and reimbursements to appropriations for services rendered amounted to $102,324.15, making a total of $1,834,244.15.

Expenses amounted to $1,552,048.70, of which $1,543,209.26 was chargeable to appropriations and $8,839.44 chargeable to income.

The income realized by the Treasury from the mint service aggregated $1,010,838.26, of which $402,421.54 was seigniorage. The seigniorage on subsidiary silver coin was $276,133.38; on nickel coin, $27,822.44; and on bronze coin, $98,465.72.

Deposits of Gold and Silver, Income, Expenses, and Employees, by Institutions, Fiscal Year 1932

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1932, and the number of employees on June 30, 1932, at each institution are shown in the following table:

Institution	Number of deposits of gold and silver	Number of mint service transfers	Coinage value of gold and silver received	Gross income	Gross expense	Excess of income (+) or of expense (−)	Employees June 30, 1932
Philadelphia	12,399	490	$14,332,531.19	$452,956.36	$615,096.24	−$162,139.88	248

Coinage by the United States for Other Countries

The coinage (by the United States mint at Philadelphia) for other countries during the same period totaled 9,532,316 pieces, as compared with 2,355,120 during the prior year, as follows:

Country and denomination	Gold	Silver	Nickel
	Pieces	*Pieces*	*Pieces*
Panama:			
1 balboa		200,020	
One-fourth balboa		48,000	
One-tenth balboa		200,000	
Honduras:			
1 lempira		850,000	
50 centavo		500,000	
20 centavo		1,000,000	
10 centavo			1,000,000
5 centavo			2,000,000
Cuba:			
1 peso		3,550,000	
20 centavo		184,296	
Total pieces		6,532,316	3,000,000
Previous fiscal year	500,000	1,855,120	

Issue of Fine Gold Bars for Gold Coin and Gold Bullion

(On value basis; see p. 62)

The value of the fine gold bars issued in exchange for gold coin and bullion monthly by the United States mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1932, was as follows:

FINE GOLD BARS ISSUED IN EXCHANGE FOR GOLD COIN OR OTHER GOLD ASSETS THAN BULLION

Month	Philadelphia	San Francisco	Denver	New York	Total
1931					
July	$20,302.54	$10,021.75	$5,001.47	$665,670.26	$700,996.02
August	25,309.57	5,003.22		1,885,263.41	1,915,576.20
September	59,196.40	15,205.72		1,676,186.16	1,750,588.28

Purchase of Minor Coinage Metal

No metals for manufacture of minor coins were purchased during the fiscal year 1932.

Minor-Coin Distribution Costs

The minor-coinage distribution costs paid during the fiscal year 1932 from the profits on minor coinage amounted to $8,711.70, as follows:

Transportation	$8,703.61
Insurance	8.09
Total	8,711.70

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand at the mints, issued, melted, and outstanding June 30, 1932. Minor coins were first manufactured at the Philadelphia Mint in 1793; at the San Francisco Mint in 1908; at the Denver Mint in 1911.

Item	Coined	On hand at mints, unissued	Issued	Melted	Amount issued and outstanding June 30, 1932
Philadelphia mint:					
Copper half cents [1]	$39,926.11		$39,926.11	$0.64	$39,925.47

Proof Bullion (1.000 Fine)

In order to establish uniformity in assay of bullion in the offices of the mint service all proof gold and proof silver is made at the mint at Philadelphia and furnished to other offices when required.

The amount so furnished during the fiscal year 1932 was: Gold, 285 ounces; silver, 100 ounces.

Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1932

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1932, was 48,200,000 fine ounces of gold and 25,000,000 fine ounces of silver. There were also operated upon at the coinage mints 6,700,000 ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative offices, as prescribed in section 3542, Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

Refining Operations

The net product of electrolytically refined gold and silver of the mint service during the fiscal year 1932 was 3,457,624.986 fine ounces; other electrolytic output included the equivalent of the refined metals used for aiding the processes, 231,012.232 fine ounces; the product of melting operations (only) totaled 2,821,103.742 fine ounces, making the total output of the refineries 6,509,740.960 fine ounces. Details are shown in the following table:

Item	San Francisco		Denver

Wastage of Coinage Metal, and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1932, was $7,072.51. A loss of $148.04 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the table following:

Item	Mint at—			Assay office at New York	Total
	Philadelphia	San Francisco	Denver		
Gold wastage:					
Melting and refining department	$3, 324. 07				$3, 324. 07
Coining department	1, 091. 83				1, 091. 83
Silver wastage:

Engraving Department

The engraving department (at the Philadelphia mint) made 581 working dies for domestic coinage during the fiscal year ended June 30, 1932 Master dies, hubs, and working dies were made for domestic, Philippine, Honduras, Panama, Cuba, and China coinage; and for the Post Office, War and Navy Departments, as well as for medals of a national character.

Other work included the manufacture of special tools, and application of chromium plating to 280 coinage dies, collars, and other machine parts.

Grand total	343,863,492.69

Laboratory, Bureau of the Mint

From the domestic coinage of the calendar year 1931 the assayer of this bureau examined and tested 76 gold coins and 78 silver coins, all of which were found within the legal requirements as to weight and fineness.

The following table summarizes results of fineness tests on domestic coins, the limit of tolerance being one one-thousandth above or below 900 thousandths for gold coins and three one-thousandths above or below 900 thousandths for silver coins.

Fineness (thousandths)	Gold coins			Silver coins			
	Philadelphia	Denver	Total	Philadelphia	San Francisco	Denver	Total
898.6				2			2
899.0				2	7	2	11

Assay Commission's Annual Test of Coin

Section 3547 of the Revised Statutes provides for an annual test of the domestic coinage executed during each calendar year by a commission of whom part are ex officio members, the others being appointed, without compensation, by the President. The purpose is "to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight." The commission, which met at the Philadelphia Mint February 10 and 11, 1932, reported the following results of their examination of the 1931 coinage:

The committee on counting reported that the packages containing the pieces reserved by the several mints for the trial of coins, in accordance with section 3539 of the Revised Statutes, were delivered to us by the superintendent of the mint at Philadelphia; that the packages delivered were compared with the transcripts furnished with them and were found to be correct as to date, number of delivery, and denomination. All packages were then opened, the coins therein counted and found to agree with the number called for in each package.

The verification of the packages containing the reserved coins being completed, the committee on assaying and the committee on weighing selected such coins as were required for their examination. In the reports of those committees will be found an account of the disposition of these coins.

The committee on assaying reported that it had completed the test assays on individual coins and mass melts as selected from the pyx representing the different denominations of coin delivered by the mints during the year 1931. Double eagles was the only denomination coined in gold, and dimes was the only denomination in silver.

The legal allowance in fineness as prescribed by law is one one-thousandth on gold and three one-thousandths on silver. According to the results shown in the following table of extreme variations, the law has been fully complied with.

Highest assays on gold coins:	
Philadelphia Mint	900. 2
Denver Mint	900. 0
Lowest assays on gold coins:	
Philadelphia Mint	899. 7
Denver Mint	899. 8
Highest assays on silver coins:	
Philadelphia Mint	899. 5
San Francisco Mint	900. 0
Denver Mint	899. 5
Lowest assays on silver coins:	
Philadelphia Mint	899. 1
San Francisco Mint	898. 6
Denver Mint	898. 6
Mass melts:	
Gold—	
Philadelphia Mint	899. 8
Denver Mint	900. 1
Silver—	
Philadelphia Mint	899. 3
San Francisco Mint	899. 3
Denver Mint	899. 1

The committee on weighing reported that in accordance with the rules adopted by the assay commission in 1930 the committee received from the committee on assaying the residues of the several parcels of reserved coins, and took therefrom at random such a number of coins of each denomination represented and so distributed by dates of coinage as to be sufficient for the purposes of weighing. Since the major portion of the 1931 total coinage value was in gold double eagles not less than 10 per cent of the number in each parcel of reserved coins were weighed. This procedure resulted in the selection and weighing of 305 double eagles. The remaining 1931 coinage from the three mints consisted of dimes, and either two or three coins were taken at random from each of the parcels of reserved coins. Dimes thus selected and weighed totaled 114.

Each of these coins was weighed to an accuracy of 0.01 grain and the results recorded. The standards used were a set of sealed coin weights and a set of

grain weights, delivered to the commission from the Bureau of Standards, Washington, D. C., under seal and accompanied by certificates signed by the director of the bureau. The weighings were made by the method of substitution on the balance belonging to the Philadelphia Mint and regularly employed for this purpose. This balance was tested before the weighing of the coins was commenced and was found to be accurate and reliable and very well adapted for the work of the committee.

* * * Each coin was well within the deviation allowed by law. Also the average weights of the coins of the two different denominations were very close to the established legal standards.

The deviations from standard of the heaviest and lightest coins encountered of each denomination from each mint, are shown in the following table:

Items	Legal deviation allowed	Philadelphia		San Francisco		Denver	
		Heavy	Light	Heavy	Light	Heavy	Light
GOLD COINS							
Double eagle	*Grains* 0.5	*Grains* 0.42	*Grains* 0.30	*Grains*	*Grains*	*Grains* 0.36	*Grains* 0.25
SILVER COINS							
Dime	1.5	.91	.65	0.75	0.48	.70	1.16

After the weighing of the coins above, your committee examined the weight known as the "troy pound of the mint" and compared it with combinations of weights used as working standards of the Philadelphia Mint. The condition of the balance used for these tests and the relative values of the weights were found to be entirely satisfactory.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1932, is respectfully submitted.

R. J. GRANT,
Director of the Mint.

Hon. OGDEN L. MILLS,
Secretary of the Treasury.

PART II

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1931

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1931

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1931 is estimated to have been $49,527,200, and the production of silver is estimated at 30,932,050 fine ounces. A comparison of these figures with those for 1930 indicates $2,279,600 increase in production of gold and approximately 19,800,000 ounces decrease in silver production.

As regards individual States, the outstanding differences in gold production as compared with the prior year are increases by California of nearly $1,500,000, by Alaska of over $1,200,000, and by South Dakota of over $500,000, with a decrease by Utah of over $500,000.

Individual States' material differences in silver production as compared with the prior year include decreases by nearly all States, these amounting to nearly 6,400,000 ounces for Utah, over 4,500,000 ounces for Montana, nearly 2,500,000 ounces for Colorado, nearly 2,300,000 ounces for Idaho, and over 1,800,000 ounces for Nevada.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines and to the Geological Survey, follows. The production figures therein differ as explained above, from the Bureau of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the Bureau of Mines at Washington.

ALASKA

Alaska mines in 1931 produced gold valued at $9,507,000 compared with an output of $8,476,000 in 1930.

In 1931 about 49 per cent of the total gold production came from lode mines, compared with 43 per cent in 1930 and 47 per cent in 1929.

The auriferous lode mines in 1931 produced gold valued at $4,665,000 compared with $3,639,000 in 1930.

The value of the placer gold produced in Alaska in 1931 was $4,842,000 compared with an output of $4,837,000 in 1930.

Twenty-eight gold dredges were operated in Alaska in 1931, one more than in 1930. The dredges in 1931 handled about 10,214,000

cubic yards of gravel and produced gold valued at $3,749,000, which is somewhat less than the output of dredges in 1930. The total output of gold dredges in Alaska, including 1931, has been $46,669,000.

The silver production of Alaska in 1931 was 352,000 ounces, valued at $102,000. The auriferous lode mines yielded bullion which contained 129,800 ounces of silver, the copper ores treated contained 193,850 ounces, and bullion from placer mines yielded 28,350 ounces of silver. The value of silver produced in 1930 was $157,300.

In 1931, as in 1930, there was a substantial increase in the output of gold attributable to the completion and operation of large dredging units and improvement in engineering efficiency. The decrease in silver was due to very low prices that prevailed for metals which discouraged large outputs and the undertaking of new enterprises. The world-wide stagnation of business and the accompanying depression seem to have been felt less in Alaska than in most places, and the record in 1931 of a decrease of only about 11 per cent in the value of the mineral output from Alaska compares favorably with similar enterprises in the States. Each year brings more general development of mineral resources throughout the Territory.

ARIZONA

Arizona produced gold in 1931 valued at $2,608,495, a decrease of $893,115 from that of 1930, according to C. N. Gerry, of the United States Bureau of Mines. The larger part of the gold, or $1,211,541, had its source in crude ore smelted, representing a decrease of $912,803 in gold from that source in 1930. Gold in bullion from ore treated by amalgamation was valued at $40,029 and that treated by cyanidation at $700,848, or a total of $740,877, which increased $96,584 over that of 1930; gold in concentrate was valued at $619,157, a decrease of $133,782. The gold from lode mines was derived from the following sources: Copper ore, $1,667,900; dry or siliceous ore, chiefly gold ore, $889,417; lead ore, $28,614; and copper-lead ore, $461. Gold from siliceous gold ore, chiefly from Mohave County, increased somewhat over that of 1930, as a result of continued production from the Tom Reed mine at Oatman. Nearly 64 per cent of the State's gold came from copper ore and most of the remainder from gold ore; placers produced $22,103 in gold, an increase of $9,046 over 1930. No dredges were operated. The largest producers were the Tom Reed, Copper Queen, Calumet and Arizona, New Cornelia, United Verde, Magma, and United Verde Extension mines.

The silver output amounted to 3,245,311 ounces, a decrease of 2,295,421 ounces from the output of 1930. Most of the silver in Arizona is recovered from copper ore, and as there was a decided decrease in the output of copper ore in 1931 there was a corresponding decrease in the output of silver. The sources of silver output were: Copper ore, 2,889,868 ounces; siliceous ore, 233,652 ounces; lead ore, 119,391 ounces; copper-lead ore, 2,243 ounces; and placers, 157 ounces. Most of the silver, or 2,252,563 ounces, was recovered from crude ore smelted, while most of the remainder, or 934,742 ounces, was recovered from concentrates smelted. The largest silver producers were the Calumet and Arizona, Magma, Copper Queen, United Verde, and United Verde Extension mines.

There were 320 mines producing during the year, of which number 68 were placer mines.

CALIFORNIA

The total recoverable gold in ore and gravels treated in California in 1931, according to Victor C. Heikes of the United States Bureau of Mines, was valued at $10,814,162, of which 462 lode mines yielded $6,793,416 and 497 placers (including dredges) $4,020,746. Compared with the gold yield in 1930 this was an increase of $1,363,000, with the lode mines showing the larger increase in output. Of the total gold yield in 1931 lode mining produced 63 per cent and placer mining 37 per cent. Only three counties had a production of gold exceeding $1,000,000 and these, in order of rank, were Nevada, Sacramento, and Amador. Of the lode gold output, gold ore and tailings yielded nearly 95 per cent; copper ore, etc., 4 per cent; and lead and copper-lead-zinc ore 1 per cent. Of the placer gold output dredges yielded 90 per cent, surface placers over 5 per cent, drift placers nearly 3 per cent, and hydraulic placers over 1 per cent. The gold output of 22 dredges (24 in 1930) was 5 per cent more than in the preceding year. Twenty-nine companies in the State produced more than 1,000 ounces of gold each and contributed 90 per cent of the total gold output.

The mine production of silver in California in 1931 was 867,818 fine ounces, valued at $251,667, a decrease of 754,985 ounces in quantity and $373,112 in value compared with 1930. No company produced more than 500,000 ounces, only 3 more than 100,000 ounces, 2 between 50,000 and 100,000 ounces, and 19 with less than 50,000 ounces each. The chief silver-producing counties in 1931 were Plumas, Nevada, Inyo, and San Bernardino, each with an output of between 100,000 and 350,000 ounces, followed by Napa with an output of slightly over 60,000 ounces and Mono and Amador each with an output of over 10,000 and under 20,000 ounces. Of the total silver output from lode mines dry silver ore yielded 110,621 ounces or 13 per cent, copper ore, etc., 322,148 ounces or 38 per cent, gold ore and tailings 202,937 ounces or 24 per cent, lead ore 141,691 ounces or 17 per cent, gold and silver ore 60,009 ounces or 7 per cent, and copper-lead-zinc ore 17,198 ounces or 2 per cent. The yield of silver from placer mines was 13,214 ounces, valued at $3,832.

CENTRAL STATES

The total mine production of silver in the Central States in 1931 was 42,737 ounces valued at $12,394, which was 137,090 ounces less than the output in 1930. No copper bullion was refined in Michigan so that the output in that State in 1931 was from lumps of native silver sold. The mine production of silver from Missouri decreased from 170,210 ounces in 1930 to 40,000 ounces in 1931. No copper ore was mined, so that all the silver was derived from lead ores of southeastern Missouri.

The silver credited to Illinois in 1931 was from galena concentrates made at fluorspar mines and shipped to the St. Louis Smelting & Refining Co. for smelting. As the mining of fluorspar was less active in 1931 than in 1930, the recovery of silver decreased from 1,797 ounces to 1,300 ounces.

COLORADO

Colorado metal mines yielded in terms of recovered metals $4,822,733 in gold in 1931, as compared with $4,517,619 in 1930, according to Charles W. Henderson, of the United States Bureau of Mines. Lode mines in 1931 yielded $4,801,149 and placers $21,586. Placer mines in 1930 yielded $138,243. The siliceous sulphotelluride gold ores of the Cripple Creek district yielded in recovered amalgam and cyanidation bullion $2,385,769 in 1931, as compared with $2,532,032 in 1930. Other important gold-producing counties were Park, $871,789; San Juan, $647,208; Gilpin, $338,404; Ouray, $201,764; Lake, $104,490; Eagle, $77,076; Clear Creek, $75,502; San Miguel, $45,666; Boulder, $27,608; and Summit, $19,674.

The silver produced amounted to 2,195,915 ounces, as compared with 4,382,852 in 1930. Eagle County produced 1,497,131 ounces and San Juan County 430,793 ounces. The record for other important silver-producing counties of 1930 was as follows in 1931: Lake, 81,183 ounces; Mineral, none; Saguache, 1,507 ounces; San Miguel, 9,324 ounces; Dolores, 1,648 ounces; Pitkin, 37,169 ounces; and Clear Creek, 22,614 ounces. In 1931 Ouray County yielded 40,586 ounces, as compared with 18,122 ounces in 1930, and Park County yielded 28,531 ounces, as compared with 11,709 ounces in 1930. Gilpin County produced 20,787 ounces in 1931 and 21,696 ounces in 1930. The total production of Colorado from 1858 to 1931 has been: Gold, $720,301,765; silver, 660,127,834 ounces.

EASTERN OR APPALACHIAN STATES

The mine production of gold in the Eastern or Appalachian States decreased from 2,266.06 fine ounces, valued at $46,637, in 1930 to 1,152.63 fine ounces, valued at $23,827, in 1931. Tennessee produced $8,325, North Carolina $7,598, Pennsylvania $5,200, Georgia $1,827, South Carolina $470, and Alabama $407. The placer mines (10 in number) yielded $3,434, of which $1,776 was from North Carolina; only two of the placers yielded more than $400.

Siliceous gold ore in Georgia and North Carolina amounting to 450 tons yielded $1,868 in gold. The copper ore and copper concentrates from pyritiferous magnetite ore yielded $18,525 in gold, of which $5,000 was from North Carolina, $8,325 from Tennessee, and $5,200 from Pennsylvania. None of the lead, zinc, or lead-zinc ores yielded any gold or silver, and gold mining at lode mines was largely experimental work.

The mine output of silver was 63,949 ounces or 59,641 ounces less than in 1930. Only 28 ounces were derived from placer bullion and 21 ounces from siliceous ore. Copper ores yielded 61,300 ounces, of which Tennessee is credited with 41,000 ounces and North Carolina with 20,300 ounces. The silver from Pennsylvania (2,600 ounces) came, as in former years, from the Cornwall mine in Lebanon County.

IDAHO

In 1931, according to C. N. Gerry, of the United States Bureau of Mines, Idaho's output of gold was valued at $379,563 and that of silver, $2,094,068. There was a decrease of $63,746 in the production of gold and a decrease of 2,199,716 ounces in the production of silver from that of 1930; the value of the silver output decreased $1,532,878.

Gold decreased from $443,309 in 1930 to $379,563 in 1931, as a result of the decreased output of gold from the Sherman Howe property near Burgdorf, and from the dredge of the Idaho Gold Dredging Corporation at Centerville, which was destroyed by fire in July, 1931. Of the total gold output ($379,563) the placer gold amounted to $107,773, against $82,428 in 1930; the gold won by four dredges was valued at $80,352, an increase from $68,527 in 1930. A new dredge was operated late in 1931 in the Warren district, Idaho County, by the Idaho Gold Dredging Co., which took second place among Idaho gold producers for the year.

Dry or siliceous ore, chiefly gold ore, produced more gold than any other kind of ore, or $229,104; gold in lead-zinc ore was valued at $18,059; lead ore, $15,493; copper ore, $9,076; and copper-lead ore, $58. In 1931 more than 60 per cent of Idaho's gold came from siliceous gold ore. The largest producers of gold were the Talache (Gold Hill) mine at Quartzburg, the Idaho Gold Dredging Co. at Warren, the Idawa Gold Mining Co. at Placerville, the Idaho Gold Dredging Corporation at Centerville, the Lost Pilgrim and Hall-Interstate group east of Cascade, the Gladstone Mines Corporation at Baker, and the American Gold Dredging Co. at Triangle.

The silver output was 7,220,923 ounces, a decrease of more than 23 per cent from that of 1930. Lead ore supplied 3,273,934 ounces; copper-lead ore, 2,671,907 ounces; lead-zinc ore, 1,254,954 ounces; siliceous ore, 16,859 ounces; copper ore, 1,421 ounces; and placers 1,848 ounces. The Coeur d'Alene region (Shoshone County) alone produced 7,003,541 ounces of silver, a decrease of 1,827,920 ounces from that of 1930. The largest producers of silver were the Sunshine, Bunker Hill & Sullivan, Hecla, and Morning mines, all in the Coeur d'Alene region.

There were 296 mines producing during the year, of which 160 were placer mines and 136 lode mines.

MONTANA

Montana's mine output of gold in 1931, according to C. N. Gerry of the United States Bureau of Mines, was valued at $829,192, a decrease of $69,809 from that of 1930, and less than the average annual output for the decade 1922 to 1931, which was $1,355,665. Of the total output, $789,753 came from lode mines and $39,439 from placers. There was a decrease of $94,349 in gold from lode mines, but a decided increase ($24,540) in gold from placers. No dredges were operated in Montana in 1931. Siliceous ore, nearly all gold ore, was the source of $512,919 in gold; copper ore, $266,782; lead ore, $5,434; lead-zinc ore, $4,564; copper-lead ore, $54; and placers $39,439.

The output of silver decreased decidedly, from 7,052,889 ounces in 1930 to 3,829,837 ounces in 1931, the smallest output recorded since records of production have been kept. Nearly 97 per cent of the total silver was recovered from the mines at Butte. The output of silver from copper ore, the chief source of silver in Montana, decreased considerably from 4,583,827 ounces in 1930 to 3,710,564 ounces in 1931, and there were unusually large decreases in the output of silver from lead-zinc ore, siliceous ore, and zinc ore. Copper ore supplied the largest quantity of silver, 3,710,564 ounces; siliceous ore, chiefly

blocked out and remaining in the mine. Other lode mine production in 1931 was small. Banks and bullion buyers in South Dakota in 1931 bought placer bullion containing 96.17 ounces of gold.

The total recorded production of gold and silver (in terms of recovered metals) in South Dakota from 1875 to 1931, inclusive, has been $298,155,522 in gold and 7,883,626 fine ounces of silver. The yield in 1931 was $8,931,791 in gold and 113,562 ounces of silver.

TEXAS

Texas metal mines made no production in 1931, according to Charles W. Henderson, of the United States Bureau of Mines. The Presidio mine, at Shafter, the Hazel mine, near Van Horn, and the smaller properties near Allamoore and Van Horn have all been idle since their closing in 1930.

The total output of gold from Texas mines from the first year of available United States Government production records—1885 to 1930, inclusive—mostly from the Presidio mine, has been $95,073, and for silver 22,772,523 ounces.

UTAH

The value of the metal output of Utah was $28,970,974 in 1931, a decrease of $19,682,490 from that of 1930, according to C. N. Gerry, of the United States Bureau of Mines. This large decline in value was due to a generally decreased output from Utah mines resulting from the low prices received in 1931 for silver, copper, lead, and zinc.

The gold output was valued at $4,108,323, a decrease of $200,825 from that of 1930, but it was more than the average annual output for the decade 1922 to 1931, which was $3,764,489. Separated as to source, siliceous ore, chiefly gold ore, was most important, containing gold valued at $1,570,784; copper ore supplied $1,344,055 in gold; lead-zinc ore, $995,344; lead ore, $197,286; copper-lead ore, $70; and placers, $784. Crude ore of smelting grade yielded $1,938,637 in gold, ore treated by amalgamation yielded $377, ore and old tailings concentrated yielded $2,149,525, and miscellaneous material, chiefly old tailings smelted and old tailings treated by cyanidation, yielded $19,000. The five largest producers of gold were the Utah Copper, Eureka Standard, United States Smelting, Refining & Mining, North Lily, and Mammoth companies.

The silver production in Utah decreased decidedly from an output of 13,129,421 ounces in 1930 to 8,290,966 ounces in 1931. The State, however, maintained its position as the largest producer of silver in the United States. The output in 1931 was much less than the average annual output for the decade 1922 to 1931, which was 16,899,012 ounces. Separated as to source, the silver came principally from lead-zinc ore, which supplied 3,870,872 ounces, and from lead ore, which supplied 2,432,017 ounces; dry or siliceous ore supplied 1,307,906 ounces; copper ore, 679,503 ounces; and copper-lead ore, 662 ounces. First-class crude ore yielded 3,015,402 ounces of silver, ore and old tailings concentrated yielded 5,228,020 ounces, miscellaneous material, nearly all old tailings smelted, yielded 47,538 ounces, and placers yielded 6 ounces. The Tintic district in Juab and Utah Counties, produced 3,286,748 ounces, against 4,834,829 ounces in 1930. The Bingham district of Salt Lake County produced 2,502,057 ounces,

against 3,517,117 ounces in 1930, and the Park City region, in Summit and Wasatch Counties, 2,124,177 ounces, against 4,212,403 ounces in 1930. The five largest producers of silver were the Tintic Standard, Silver King Coalition, United States Smelting, Refining & Mining, Utah Copper, and Eureka Standard companies.

There were 105 producing mines, of which 96 were lode mines and 9 placer properties.

WASHINGTON

The output of gold in Washington in 1931, according to C. N. Gerry, of the United State Bureau of Mines, had a value of $60,035, a decrease of $27,713 from that of 1930. Most of the gold of the State, or $56,342, came from siliceous gold ore; copper ore supplied $529 in gold; and placers $3,164. Except for lessees' operations, the gold mines at Republic were idle, as they have been for the last three years. The district, however, lead in the production of gold in Washington in 1931. Crude ore supplied $42,659 in gold, ore treated by amalgamation $13,352, and concentrates $860. Since 1860 Washington has produced $30,482,780 in gold. Gold produced in 1931 from the Boundary Red Mountain property in Whatcom County, the only mine in Washington worthy of note as a producer of gold in 1930, was less than one-fifth of that produced in 1930. The Knob Hill mine at Republic took first place as a gold producing mine in 1931.

The output of silver was 22,410 ounces, the smallest output in the last 31 years, due to the continued idleness of former large producers at Republic and to the decrease in the production of copper ore at Index. Of the total silver, 10,322 ounces had its source in copper ore, 7,316 ounces in siliceous ore, 4,595 ounces in lead-zinc ore, 165 ounces in lead ore, and 12 ounces in placer dust and bullion. Crude ore supplied most of the silver, or 16,387 ounces; concentrates, 5,959 ounces; and ore treated by amalgamation, 52 ounces. The three largest producers of silver were the United Copper mine near Chewelah, Stevens County, the Knob Hill mine at Republic, Ferry County, and the Josephine mine of the Pend Oreille Mines and Metals Co. near Metaline Falls, Pend Oreille County.

There were 24 lode mines and 21 placers producing in 1931.

WYOMING

Metal mines in Wyoming in 1931, according to Charles W. Henderson, of the United States Bureau of Mines, yielded 26.22 fine ounces of gold from lode mines and 30.14 fine ounces of gold from placer mines; also 17 ounces of silver from lode mines. Each item of placer gold contained a little silver, too small to be tabulated in $1 units. The production of gold, both lode and placer, came chiefly from the Atlantic City district, Fremont County. Albany and Park Counties each yielded a small quantity of placer gold; the silver from lode mines was contained in copper ore shipped from Encampment, Carbon County.

GENERAL TABLES

Refinery production (arrivals thereat) of gold mined in the several States and Territories in 1930 and 1931, with the increase and decrease in each for the latter year

State or Territory	Production [1]		Increase, 1931	Decrease, 1931
	1931	1930		
	Ounces [2]	*Value*	*Value*	*Value*	*Value*
Alaska	466,006	$9,633,200	$8,420,800	$1,212,400	
Alabama	39	800	200	600	
Arizona	136,805	2,828,000	3,073,500		$245,500
California	521,158	10,773,300	9,308,300	1,465,000	
Colorado	225,147	4,654,200	4,511,800	142,400	
Georgia	77	1,600	4,200		2,600
Idaho	18,058	373,300	438,200		64,900
Montana	40,901	845,500	969,500		124,000
Nevada	139,194	2,877,400	2,898,600		21,200
New Mexico	31,981	661,100	653,000	8,100	
North Carolina	344	7,100	10,300		3,200
Oregon	15,301	316,300	295,600	20,700	
Pennsylvania	237	4,900	12,600		7,700
South Carolina	24	500	500		
South Dakota	431,200	8,913,700	8,398,900	514,800	
Tennessee	397	8,200	14,900		6,700
Texas			5,000		5,000
Utah	183,402	3,792,500	4,319,100		526,600
Washington	3,357	69,400	75,400		6,000
Wyoming	53	1,100	9,100		8,000
Philippine Islands	182,137	3,765,100	3,828,600		63,500
Total	2,395,878	49,527,200	47,247,600	3,364,500	1,084,900
Net increase				2,279,600

Total [3]	1,771,867	367,439	85,423	4,415,722	15,867,255	9,573,651

[1] Includes small quantity of silver from placer mines (less than 50,000 ounces).
[2] Includes silver in lead, silver-lead, lead-zinc, copper-lead, copper-lead-zinc, and zinc ores.
[3] Philippine Islands not included. They report 96,940 ounces of silver from lode mines and 160 ounces from placers; $3,732,185 gold from lode mines and $30,248 from placers.

Production of gold and silver in the United States since 1792 (including Philippine Islands production received in United States)

[The estimate for 1792–1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint]

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1931

Among the purveyors of gold and silver bars for use in the industrial arts of the United States, the United States assay office at New York and the mint at Philadelphia hold the foremost places; consequently the larger portion of the material consumed in the arts is brought under Government notice and is a matter of public record.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1931, with the classes of material from which they were made:

Gold and silver issued for use in the industrial arts during the calendar year 1931 [1]

Item	Issued by—	Gold	Silver
		Value	*Fine ounces*
Bullion	Mints and assay offices	$23, 219, 322	589, 881
Bullion in various forms	Private refineries and dealers	4, 938, 543	33, 014, 894
United States coin [2]	Banks, etc	1, 000, 000	77, 344
Total		29, 157, 865	33, 682, 119
Old jewelry, plate, scrap, etc., contained in private refineries' and dealers' returns, and that returned to monetary use		23, 227, 085	9, 346, 281
New material		5, 930, 780	24, 335, 838

[1] For explanation of calculation, see p. 62.
[2] Estimated; the quantity of silver is equal to 100,000 silver dollars.

Gold and silver furnished for use in manufactures and the arts, and classification of the materials used, since 1880

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations the receipt classification item of "Domestic refinery bullion" includes that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that work only old materials.

Gold and silver production estimates.—These estimates consist of arrivals at United States mints and assay offices and at privately owned refineries (bullion producing plants), of gold and silver from mines within the States and Territories of the United States, including the production of the Philippine Islands which comes to the United States for reduction. The portion of this figure representing mint receipts is on the quantity basis.

Gold and silver consumption in industry.—These estimates comprise bar sales by the mints and assay offices for industrial use (partly estimated) plus similar items issued by private refiners, dealers (and manufacturers), as reported to the mint bureau, plus an estimate of domestic coin melted for industrial use; from the total of these is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net new materials consumed.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial

use; since 1928 the additional factor of gold coin "earmarked" or set aside for foreign owners, has been considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. In 1928 minor coin was added, using only the 5-cent nickel and 1-cent bronze coins of the type commonly in circulation and considering only the amounts coined and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised back to the establishing of the Federal reserve system (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

Losses and Gains on Withdrawn Coin

The loss on face value of gold coin totaling $2,967,958.50 withdrawn from circulation during the fiscal year 1932 was $22,666.56, of which $5,730.14 was reimbursable from the appropriation provided for that purpose. The loss on face value of silver coin totaling $7,482,437.47 withdrawn from circulation was $657,281.32, all being reimbursable from the appropriation provided. The reimbursable loss, provided for by appropriation, on minor coin totaling $575,860.15 withdrawn during the fiscal year was $29,923.12.

Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin, since 1883

[1] Louisiana Purchase Exposition.
[2] Lewis and Clark Exposition.
[3] Panama–Pacific International Exposition coins; the fifties comprise octagonal, $75,450; round, $75,500.
[4] Includes $25,042.50 Panama–Pacific International Exposition coins.
[5] McKinley memorial coins.
[6] Grant memorial coins.
[7] Includes $500,565 National Sesquicentennial of Signing Declaration of Independence coins.

NOTE.—Coinage during the early years not susceptible of exact statement by years of actual date on coin, the registry of annual coinage being of coin delivered by the coining departments of mints within the given year, and these deliveries not having been invariably completed within the year of the date of coin, as now required.

Combined silver coinage [1] of the mints of the United States, by denominations and calendar years, since their organization

Calendar year	Trade dollars	Dollars	Half dollars	Quarter dollars	Dimes	Half dimes	3 cents

[1] **20-cent silver coinage, 1875, $265,598; 1876, $5,180; 1877, $102; 1878, $120; total $271,000.**

[2] Includes $475,000 in Columbian coins.

[3] Includes $2,026,052.50 in Columbian coins.

[4] Includes $10,005.75 in Columbian coins.

[5] Includes $50,026 in Lafayette souvenir coins.

[6] Includes $30,015 in Panama Pacific International Exposition coins.

[7] Includes $50,029 Illinois Centennial coins.

[8] Includes $25,014 Maine Centennial and $100,056 Landing of Pilgrims coins.

[9] Includes $1,006,473 "Peace" coins.

[10] Includes $50,026.50 Landing of Pilgrims, $25,014 Missouri Centennial, and $35,022 Alabama Centennial coins.

[11] Grant Memorial coins.

[12] Includes $137,038.50 Monroe Doctrine commemorative coins.

[13] Huguenot-Walloon commemorative coins.

[14] Stone Mountain, $1,157,354.50; Lexington-Concord, $81,049.50; California Jubilee, $75,100; Vancouver, $25,014.

[15] National Sesquicentennial of signing Declaration of Independence, $500,264; Oregon Trail, $74,042.50.

[16] Includes commemorative coins Battle of Bennington, Vt., $20,017.

[17] Includes $25,014 Oregon Trail and $5,004 Hawaiian commemorative coins.

NOTE.—The silver dollar coins executed subsequent to 1920 represent an equivalent number of dollars converted to bullion under the act of Apr. 23, 1918—259,121,554 for export to India and 11,111,168 for domestic subsidiary coin.

[1] For method of estimating see p. 62.

NOTE.—The number of standard silver dollars coined to June 30, 1932, was 840,555,358, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals $41,702,217. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000, the net export from November, 1919, to July, 1920, in movement due to the high price of silver, was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, totaled 270,232,722, those melted otherwise (mutilated, etc.), since 1883 numbered 224,113; and the number of Hawaiian dollars melted to June 30, 1932, was 455,329, a total disposition of 301,694,306, leaving in the United States on June 30, 1932, 540,007,911 standard silver dollars and 304,882,996 dollars in subsidiary silver coin.

[1] Does not include gold bullion or foreign coin other than that held by the Treasury, Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.

[2] These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

[3] The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

[4] This total includes $59,689,661 gold deposited for the redemption of Federal reserve notes ($1,088,640 in process of redemption), $29,849,700 lawful money deposited for the redemption of national-bank notes ($16,549,164 in process of redemption, including notes chargeable to the retirement fund), $1,350 lawful money deposited for the retirement of additional circulation (act of May 30, 1908), and $16,861,073 lawful money deposited as a reserve for postal-savings deposits.

[5] Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

[6] The money in circulation includes any paper currency held outside the continental limits of the United States.

[7] Population of continental United States (estimated) June 30, 1932, 124,822,000; June 30, 1931, 124,076,000; Oct. 31, 1920, 107,096,000; Mar. 31, 1917, 103,716,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury for their redemption; United States notes are secured by a gold reserve of 156,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury; these notes are being canceled and retired on receipt. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the federal reserve Act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National-bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national-bank notes secured by Government bonds.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

[1] For method of estimating, see p. 62.

NOTE.—The number of standard silver dollars coined from 1878 to Dec. 31, 1931, was 840,555,358, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 841,702,217. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000; the net export from November, 1919, to July, 1920, in movement due to the high price of silver, was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, totaled 270,232,722; those melted otherwise (mutilated, etc.), since 1853 numbered 223,863, and the number of Hawaiian dollars melted to Dec. 31, 1931, was 455,329, a total disposition of 301,694,056, leaving in the United States on Dec. 31, 1931, 540,008,161 standard silver dollars and 308,313,375 dollars in subsidiary silver coin.

[1] Does not include gold bullion or foreign coin other than that held by the Treasury, Federal reserve banks, and Federal reserve agents. Gold held by Federal reserve banks under earmark for foreign account is excluded, and gold held abroad for Federal reserve banks is included.

[2] These amounts are not included in the total since the money held in trust against gold and silver certificates and Treasury notes of 1890 is included under gold coin and bullion and standard silver dollars, respectively.

[3] The amount of money held in trust against gold and silver certificates and Treasury notes of 1890 should be deducted from this total before combining it with total money outside of the Treasury to arrive at the stock of money in the United States.

[4] This total includes $55,466,536 gold deposited for the redemption of Federal reserve notes ($503,280 in process of redemption), $28,667,622 lawful money deposited for the redemption of National bank notes ($17,040,235 in process of redemption, including notes chargeable to the retirement fund), $1,350 lawful money deposited for the retirement of additional circulation (act of May 30, 1908), and $16,155,207 lawful money deposited as a reserve for postal savings deposits.

[5] Includes money held by the Cuban agency of the Federal Reserve Bank of Atlanta.

[6] The money in circulation includes any paper currency held outside the continental limits of the United States.

[7] Population of continental United States (estimated) Dec. 31, 1931, 124,556,000; Dec. 31, 1930, 124,074,000; Oct. 31, 1920, 107,096,000; Mar. 31, 1917, 103,716,000; June 30, 1914, 99,027,000; Jan. 1, 1879, 48,231,000.

NOTE.—Gold certificates are secured dollar for dollar by gold held in the Treasury for their redemption; silver certificates are secured dollar for dollar by standard silver dollars held in the Treasury. This redemption; United States notes are secured by a gold reserve of $156,039,088 held in the Treasury. This reserve fund may also be used for the redemption of Treasury notes of 1890, which are also secured dollar for dollar by standard silver dollars held in the Treasury; these notes are being canceled and retired on receipt. Federal reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal reserve bank. Federal reserve notes are secured by the deposit with Federal reserve agents of a like amount of gold or of gold and such discounted or purchased paper as is eligible under the terms of the Federal reserve act. Federal reserve banks must maintain a gold reserve of at least 40 per cent, including the gold redemption fund which must be deposited with the United States Treasurer, against Federal reserve notes in actual circulation. Lawful money has been deposited with the Treasurer of the United States for retirement of all outstanding Federal reserve bank notes. National bank notes are secured by United States bonds except where lawful money has been deposited with the Treasurer of the United States for their retirement. A 5 per cent fund is also maintained in lawful money with the Treasurer of the United States for the redemption of national bank notes secured by Government bonds.

[1] Data for individual years published in Reports of the Director of the Mint for 1931 and for prior years.

NOTE.—The quantities in the column "Net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 tolas, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

The Course of Gold and Silver

The following review of the London market during the calendar year 1931 is from the annual circular issued by Messrs. Sharps & Wilkins, bullion brokers, of London, England:

GOLD

The past year has presented several important features, of which the following appear worthy of special reference:

1. The abnormally heavy withdrawals of gold from London to certain continental centers, which took place during the opening month of the year and which, after a temporary cessation, were resumed to an increased extent during July, August, and September. As the result of the financial crisis in Germany and Austria which developed in July, confidence abroad became severely shaken, which was followed by the repatriation of part of the large balances held in this country on continental account.

2. The serious effect of these exports upon the reserves of gold held by our central institution which, according to the return published on the 12th of August, had depreciated to the low level of £132,000,000, showing a net efflux of £15,000,000 since the commencement of the year and of rather more than £18,000,000 since the return to a gold standard became effective in 1925.

3. The decision of the Government, after consultation with the Bank of England, to suspend as from the 21st of September, 1931, that section of the gold standard act of 1925 which imposed a definite obligation on the part of the bank to sell bar gold at a statutory price. This alteration in the existing conditions became necessary as a countermove to the heavy withdrawals of foreign balances from this country. An act to this effect, known as the gold standard (amendment) act, 1931, was duly passed by Parliament on the 21st of September. The new act merely applied to the sales of gold by our central institution and in no way affected the existing conditions of dealing with gold offered for sale in the open market.

The first intimation of any possible change was the refusal of the Bank of England on the 17th of September to issue sovereigns for export. Since the

return to a gold standard in 1925, the bank, although under no obligation in the matter, had been in the habit of giving sovereigns for export purposes as an act of grace, considerable quantities having been shipped to the Continent and also to India during this period.

The immediate effect of the amended conditions was a sharp depreciation in the value of sterling in terms of the currencies of other countries remaining on a full gold standard. As the result, a premium in terms of sterling on gold, varying in extent according to the depreciation in this currency, became established, and remained throughout the rest of the year, with the highest price 126s. 10d. quoted on the 8th of December, and representing a premium of approximately 49 per cent.

4. The commencement of gold shipments from India.

For many years past India has been one of the chief consuming countries of gold, the net imports during the present century alone amounting to over £500,000,000, the greater part of which has found its way into the interior of the country for hoarding purposes, thus virtually disappearing.

The propensity for hoarding on the part of the natives has been long in existence and it is quite impossible to arrive at even a rough estimate of the amount of gold hidden away in the various hoarding places up country.

India, in common with other producing countries, has suffered from the effects of the world-wide trade depression and the consequent slump in the prices of her export commodities, such as jute, cotton, oilseeds, and wheat. As the result the ryot [1] has become considerably impoverished, and his purchasing power reduced to little beyond the barest necessities of life. The reduction of some £10,000,000 in the amount of gold imported into India during 1931 when compared with the previous year bears testimony to the altered economic conditions in that country.

The rupee being harnessed to sterling enables the natives to take advantage of the premium on gold in terms of that currency and to realize part of their accumulated stocks. Consequently, during the last three months of the year, large quantities of the metal in various forms found their way from the interior to Bombay, where they were melted into bars at the mint for export. About £25,000,000 had been shipped up to the end of 1931, and further shipments have taken place since.

The greater part of these shipments has been refined in London on arrival, the resultant fine gold being forwarded to such countries as France, Holland, and America, which are still on a full gold standard, and therefore buyers of the metal at their individual statutory rates. Owing to the relative premium in terms of sterling at which the currencies of these three countries have ruled since the commencement of these shipments, together with the difficulty of fixing finance for protracted periods, only a comparatively small part of this gold has actually found its way to New York, by far the greater quantity having been forwarded to Paris and Amsterdam. The amounts dealt with up to the end of the year have been approximately disposed of as follows:

France	£10,000,000
Holland	4,500,000
New York	1,500,000

In addition to the above, approximately £2,000,000 has been shipped direct to New York for refining and realization in that city.

The unexpected release of part of this vast stock of gold has introduced entirely new factors of very considerable importance. In addition to improving the value of the rupee and thereby assisting in the maintenance of a 1s. 6. basis, sterling has also greatly benefited, at any rate temporarily, by the substantial sales of foreign currencies effected in connection with the realization of these shipments. The possible important effect of these gold shipments upon the price of silver is referred to in our comments upon that metal further on. At the same time the fact that this gold is ultimately finding its way into the already swollen coffers of the chief remaining gold standard countries, instead of being put to more practical and general use, is adding to the already existing difficulties which these countries are experiencing in maintaining the gold standard. Their future action will be watched with great interest.

5. The unusually small proportion of the total arrivals of gold from South Africa dealt with in the open market during the past year. The forward purchases by certain European countries of the weekly shipments from the cape during the first three months of the year and again at later dates, together with the special arrangements made during the last quarter for dealing with this gold, have been responsible for less than 50 per cent of the total arrivals being actually offered for disposal.

---

[1] Peasant.

January-March.—From the commencement of the year under review until the middle of March, the shipments of gold from London to Paris, which had proceeded more or less continuously since November, 1930, continued; approximately £20,000,000 being exported to that quarter during this period. Of this amount about half was in the form of withdrawals from the central institution during January, the balance as the result of forward purchases of the weekly arrivals from South Africa. The only gold available at the Bank of England being of standard fineness and not accepted as good delivery by the Bank of France without refining, the extent of the shipments to that quarter during the early part of January was chiefly dependent upon the daily outturn capacity of the London refiners. About the middle of the month, however, the Bank of France decided to accept standard gold without refining provided that the bars were manufactured from melted sovereigns. The price of gold in the open market which had been quoted at a premium over the Bank of England's statutory selling price, based upon the extra charge for refining, resumed its normal range.

The effect of this important development was to increase temporarily the extent of the withdrawals from the bank which were no longer restricted by the necessity of refining.

At the end of January the London-Paris exchange rate moved in favor of sterling, and no further withdrawals of any special importance were made from the Bank of England on account of France or elsewhere for the remainder of that quarter. The weekly arrivals from South Africa, however, continued to be purchased in advance, at first chiefly for account of France and later, to a minor extent, by Belgium. It was therefore not until the middle of March that the Bank of England, after a period of 12 months, was able to secure any part of this gold offered for sale in the open market.

As the result of the withdrawals from the Bank of England during the early part of the year, the stocks of gold in the issue department had become depleted by £8,000,000 to the level of £139,000,000, by the commencement of February. Mainly owing to the receipt of some £5,500,000 sovereigns from South Africa, South America, Australia, and Spain, the purchase of South African gold and also of £1,500,000 from an unknown source, the position was improved by £3,000,000 by the end of March.

April-June.—The chief feature during this period was a continuation of the strengthening of the reserves of gold held by our central institution, which by the end of June had appreciated to the extent of some £19,000,000 to £162,000,000. No important withdrawals took place and the Bank of England was able to secure the greater part of the usual weekly arrivals of gold offered for sale in the open market at the statutory buying price. In the early part of April owing to a temporary weakness in the London-New York rate and again in June as the result of the low level of the Swiss exchange, the bank experienced some competition for the available supplies of open-market gold and was therefore on occasions obliged to pay slightly above its statutory buying price.

Sovereigns to the extent of £3,500,000 continued to be received from South Africa, South American, and Australia, but these were temporarily offset by the earmarking of considerable quantities for account of Argentina. The receipt in June of about £8,000,000 in bar gold from Germany as the result of the important transfer of funds to this country, also materially assisted in strengthening the returns of the Bank of England.

July-September.—During the early part of July the central institution continued to acquire gold, the return published on the 9th of July giving the stocks in the issue department as £164,000,000, which proved to be the highest figure reached during the year. The financial crisis which developed in Germany and Austria in the middle of the month was responsible for withdrawals of the metal from London to the continent on an unprecedented scale; the gross efflux during the second half of July amounting to no less than £40,000,000. These exports were chiefly to France, but Holland, Belgium, and Switzerland participated to a lesser extent. In addition to the purchases from the bank the arrivals from South Africa during the latter part of the month were again secured in advance for account of Paris

Although the sterling rate in terms of the dollar ruled at times below the gold export point no movements of any importance took place between London and New York. This heavy drain of gold was reflected in the depletion of the stocks of the metal in London by some £31,000,000 to £132,000,000 during July.

As a means of checking the outflow of gold the bank rate was raised to 4½ per cent at the end of the month. It was further announced at this time that a credit totalling £50,000,000 had been placed at the disposal of the Bank of England by the Bank of France and the Federal Reserve Bank of New York.

These measures had the effect of temporarily easing the position and with the exception of the withdrawal of £2,500,000 on the 6th of August to France and Holland, due to the sudden weakening of the sterling rate which proved short-lived, movements of the metal adverse to this country during August were unimportant. Although the Bank of England did not secure any part of the weekly arrivals from the cape, which were bought on continental account and also by undisclosed buyers, the return published on the 26th of August showed an increase in stocks of slightly more than £1,000,000. Further substantial shipments of sovereigns continued to be received from South Africa, South America, and Australia and in addition certain important amounts, which had been previously earmarked, were released.

During the first half of September, with the Paris and New York exchange rates ruling above gold export point, the central institution was enabled to increase further its gold holding to nearly £136,000,000, chiefly by purchases in the open market, paying above the statutory minimum price. On the 14th of September heavy withdrawals began, in addition to purchases in the open market, for account of Holland, a total of some £4,000,000 being taken from the Bank of England on that and the five subsequent days.

As the result of the suspension of part of the gold standard act, 1925, as from 21st of September, all withdrawals automatically ceased. The bank rate was further raised from 4½ per cent to 6 per cent.

October-December.—Owing to the amended conditions as from the 21st of September last, with the exception of the withdrawal from the Bank of England of gold to the extent of £15,000,000 on the 31st of October in part repayment of the £50,000,000 credits granted by the Bank of France and the Federal Reserve Bank of New York in August, no important movements took place. This sale of gold had the effect of reducing the stocks held in the issue department to £120,000,000, at which level they remained throughout the rest of the year. The regular dealings in the weekly arrivals of gold in the open market also ceased, but small amounts were, however, offered for sale from time to time.

Interest during this period was chiefly centered upon the shipments of gold from India, but, as previously reported, only a very small portion was offered for sale in London, the bulk being reforwarded to either the continent or America after refining had been completed.

With the exception of the export of about £2,000,000 gold representing part of the shipments from India, no movements of any importance have taken place between this country and America during the past year.

Although Germany figured as an important buyer of gold during 1930 some £15,000,000 being exported from London, there has been a net balance of imports from that country of about £6,000,000 during the period under review.

The imports of sovereigns acquired by the Bank of England for the past year have amounted to £17,500,000 which shows a reduction of about 50 per cent when compared with 1930, for which the receipt of £19,000,000 less from Australia has been chiefly responsible. On the other hand the total movements of gold bullion both refined and unrefined have shown a substantial increase; imports amounting to £79,500,000 and exports to £125,900,000 as compared with £49,000,000 and £80,500,000 in 1930.

The figures for both imports and exports relating to the past year, however, include the shipments from India, the greater part of which was merely refined in London preparatory to reexportation.

Approximately £23,000,000 gold has been offered for sale in the open market during 1931, of which the Bank of England has secured about £13,000,000.

* * * * * * *

SILVER

The predominating features of the silver market during the past year are to be found in (1) the further depreciation in price resulting in the establishment of a new low record of 12d.; the quotation for the immediate delivery on the 9th of February, and (2) the recuperative powers displayed by the metal at a time when the market appeared to be in a more or less demoralized condition, culminating in the substantial although largely artificial appreciation in price which took place during the latter part of the year, raising the quotation to 21⅛d. representing the level ruling at the commencement of 1930.

In common with other commodities, silver has depreciated substantially in price as will be seen by referring to the table of average prices given later, not however, through overproduction of the metal, the figures for the last eight years showing comparatively little variation, but as the result of the following prime factors each of which has adversely affected the price to a varying extent.

1. The reduction in the quantity of silver required annually for coinage purposes has affected one of the old established uses of the metal.

2. The practice adopted by certain European countries, following the lead of our own Government, of debasing their coinage or issuing notes or base metal coins in place of silver, together with the growing fashion of linking currencies to gold as in the case of Indo-China and Siam, has had the effect of releasing large quantities of silver for realization usually regardless of price or the conditions existing at the time, for which a market has had to be found in addition to the production from natural sources.

The harnessing of the rupee to gold in 1927 rendered redundant the greater part of the stocks of silver held by the Indian treasury and although the disposal of this silver has actually been limited to some 30,000,000 ounces per annum, the uncertainty as to what the next move might be has cast a shadow over the market, tending to accentuate the growing lack of confidence in the metal, and inducing consumers to refrain from purchasing in excess of their actual requirements.

3. The serious depreciation in the consuming capacity of the two chief silver-using countries, India and China.

For years these two countries had been in the habit of absorbing without difficulty a very large proportion of the mined silver produced annually, together with the extra weight of demonetized coins. With their purchasing power greatly reduced, as the result of economic disturbances and the falling external value of their exports, it became impossible to market the total supplies of silver available from all sources except at continually depreciating prices.

The opinion has been freely expressed recently, although we think to an exaggerated extent, that the collapse in the price of silver has played an important creative part in the general world trade depression, owing to its responsibility in the lack of purchasing power by the Far East. As the result various schemes have been mooted for the rehabilitation of silver and the restoration of the metal to its traditional use as an important component part of the world's monetary machine.

The old-time question of bimetallism or the stabilization of silver on a fixed ratio to gold also became resuscitated. Although none of the suggestions put forward actually materialized there is no doubt that the firm belief that some international action would be taken was very largely responsible for the resistance shown by the market during the greater part of the year, operators being induced to cover their outstanding oversold positions and showing little disposition to undertake fresh short commitments.

The low price for silver must adversely affect producing more than consuming countries. The value of the Chinese tael being dependent upon the price of silver any depreciation in this respect should tend to restrict imports, at the same time stimulating exports, upon which the purchasing power of a producing country depends. The fact that the consumption of silver by China has shown a reduction of nearly 50 per cent during 1931, is due partly to political and military disturbances, but chiefly to the inability of the western nations, impoverished by postwar indebtedness and its accompaniment of heavy taxation, to purchase China's products.

The depreciated value of the tael has undoubtedly reduced the importation of certain commodities into China and thereby adversely affected those countries accustomed to depend upon the Far East for a large part of their export trade, but had there been a ready market for China's products the consuming capacity of that country for silver would hot have become so much curtailed, which would in turn have done much toward preventing the collapse in the price.

Range in prices	9 1/16	7 3/16	5 1/8	2 13/16	3 1/4	7 13/16	2 3/8

The range in prices of 9 1/16d. during 1931 is considerably larger than in recent years; in fact, it is necessary to go back 10 years in order to find a wider difference between the highest and lowest quotations. The price ruling on the 31st of December represents an appreciation of 5 3/4d. when compared with the opening rate for 1931.

At the commencement of the period under review the price of cash silver was quoted at 14 7/16d. but a weakening tendency developed almost immediately and

although temporary recoveries took place, the new low record price of 12d. was quoted on the 9th of February. Substantial orders for shipment were received from India during this period for which the fear of a possible increase in the import duty was chiefly responsible. This demand, however, was unable to absorb the persistent sales of silver by both China and America. In addition, lack of confidence in the market induced the Indian buyers to cover the greater part of their purchases by forward sales simultaneously effected. The amount shipped to India during this period represented more than 50 per cent of the total shipments during the past year. The large demand for cash silver resulted in the cash quotation being quoted at a substantial premium, as much as halfpenny ruling toward the end of January. As the result of the fresh forward sales referred to above the Indian oversold position which had continued in existence for some considerable time, became increased to about 15,000,000 ounces, and later to nearly 20,000,000 ounces.

From the low level previously reached a gradual improvement took place during the remainder of February and the first half of March until 14½d. was again quoted on the 16th of March. A moderate demand for shipment to India continued which was largely satisfied by sales of silver on continental account. It was more or less generally anticipated that the increase in the duty on silver imported into India would amount to 100 per cent, and the announcement at the beginning of March that this duty would only be raised from 4 to 6 annas per ounce together with a temporary relaxation of the political tension in India, had a stimulating effect upon the market. In addition, a less pessimistic tone showed signs of developing at that time, induced very largely by the belief that definite remedies for the fall in silver were likely to be found as the result of the proposal of an international conference to discuss the whole position.

Both India and China began to reduce their oversold positions, and in the absence of any fresh speculative selling, which had played an important part in the fall in the price, orders could only be satisfied at improving rates.

The second half of March witnessed a renewal of the weakness in the market, the absence of any fresh news as to the proposed international conference induced speculators to sell. In addition, the weakness of the China exchange rate, for which the rumored sale of a substantial amount of silver by the Indian Government to China was largely responsible, had the effect of inducing China selling, which together with the liquidation of part of the silver held against the Hong Kong note issue, caused a fall in price to 12⅝d. quoted on the 8th of April. The demand for actual metal continued extremely poor throughout this period and in consequence the stocks in London became increased to some 5,000,000 ounces, the cash price being quoted at a discount.

After recovery to 13½d. the rate on the 18th of April, for which a cessation of the China selling referred to was largely responsible, coupled with a fair amount of bear covering from the East and persistent bidding by New York for forward delivery, a gradual weakening tendency again set in which, after various fluctuations of comparatively minor importance, carried the price to 12⅝d. on the 29th of May.

There was no improvement in the offtake and although there was a resumption of forward purchases for account of Hong Kong, these were easily satisfied by sales of prompt silver by America and speculative selling from the East, prompted by the absence of any satisfactory information with regard to the proposed conference on the silver question. Some substantial sales were also made on continental account during this period.

No important movements took place during the greater part of June—the market displayed little activity. On the 22d of June President Hoover's proposal of a moratorium for war debts produced a sharp improvement in the eastern exchange rates, which, coupled with speculative covering in London, caused a rise in price to 13 1/16d. After fluctuating around this level through the remainder of the month and the commencement of July, the price again weakened to 12⅝d. quoted on the 10th of August. The feeling of comparative optimism which had existed in the market began to subside. The demand was extremely poor and operations were chiefly confined to speculative dealings both ways to a limited extent. Sales of silver by the Siamese Government, representing demonetized coins, were made during July and some shipments of silver were also made from India at this time against sales previously effected.

The announcement at the end of July that Mexico had adopted a silver standard failed to produce more than a temporary improvement in price, the market being dominated by a general lack of confidence.

Apathetic conditions continued throughout the remainder of August and the first three weeks of September. Owing to the lack of offtake and America a free

seller for prompt shipment cash silver became a drug in the market, the quotation for immediate delivery ruling at a discount.

The report received on the 19th of September of military activities between China and Japan in Manchuria had the effect of imparting a steadier tone to the market, and it is from this point that the substantial recovery in price commenced.

On the 21st of September the announcement that our government had decided to suspend part of the gold standard act of 1925, had the immediate effect of producing a depreciation in the value of sterling and a sharp upward movement in the price of silver, which rose rapidly to 19½d. the quotation on the 25th of September, representing a rise of 6⅛d. in five days. Although this improvement did not in any way stimulate the demand for the actual metal, the altered conditions induced a wave of speculative buying partly to close up the remaining oversold positions, but chiefly in the shape of fresh forward purchases, which were largely responsible not only for the improvement referred to above, but later for carrying the price up to the highest level of the year.

For many years speculative positions in silver to any important extent have been confined to the East, the operators in the bazaars freely using silver as a gambling counter. After the 21st of September speculation became largely transferred to the West, an enormous bull position being built up in New York due to the dealing in silver futures in the New York Metal Exchange which commenced operations in June, 1931.

On the 26th of September the quotation dropped back sharply to the level of 16⅜d. due partly to profit-taking by speculators but chiefly to the sale of a large amount of silver by one of the China banks with the object of checking the rapid rise in price which was disorganizing the trade conditions in that country.

At the end of September an additional duty of 2 annas was imposed by the Indian Government on silver imported into India, but this produced little effect upon the market.

After easing further to 15 15/16d. at the commencement of October, the price again improved to the level of 17d. around which it remained throughout the greater part of the month.

The special selling by China referred to above had ceased and in addition some purchases were made on continental account and bears continued to cover. There was also a demand from India for shipment, part of the proceeds from the realization of the shipments of gold received at that time being reinvested in silver.

The improvement in price induced producers to sell more freely but the increase in the export of the metal created a much healthier market by absorbing a large part of the accumulated stocks and by the end of the month the cash quotation was ruling at a premium. During the latter part of October a fresh wave of speculative buying set in chiefly from New York where operators paid exaggerated prices for forward silver, which, together with a continuation in the demand on Indian and continental accounts, was responsible for raising the price to 21⅛d. quoted on the 10th of November. This substantial further improvement, due almost entirely to the speculation existing at that time, had carried the price far above its intrinsic value, rendering the market extremely vulnerable and dangerous, as it was obvious that the rate could not be maintained at this enhanced level by speculation unbacked by genuine demand. This was plainly indicated when on the 16th of November the price broke sharply to 18d., representing a fall of 3⅛d. in one day. Large sales of silver were made, chiefly unlimited as to price, from America, India, and China, prompted partly by the quotation having risen well above the parity of the eastern rates, but also to a rumor that the Indian government was taking advantage of the high level reached to dispose of some of its silver, which induced speculators to attempt to secure profits. After so sharp a fall some reaction was only to be expected, and a recovery took place to 18⅞d. only to be followed by a further setback to 18⅛d. From this point a steadier tone developed in the market followed by a gradual rise in price to 20 1/16d. on the 8th of December, for which the weakness in sterling, together with less favorable news regarding the Sino-Japanese situation in Manchuria, was chiefly responsible.

Purchases continued on continental account which constituted practically the only important demand for the actual metal during the remainder of the year, as the Indian demand for shipment had ceased somewhat abruptly in the previous month. America was a free seller for near delivery, although lending considerable support for more distant dates. With extremely quiet conditions existing, the fluctuations in price were largely governed by the movements in the value of sterling. The reduction in the demand for export had again allowed the stocks

of the metal in London to increase substantially with the result that a discount of as much as ¼d. ruled in the cash price.

After various fluctuations the rate at the end of the year was quoted 20¾d.

* * * * * * *

Demonetized silver.—The sales of demonetized silver coins have also shown a decrease during the past year. No important amounts have been sold by European countries as in recent years, but the sales by the Indian government have continued, amounting to approximately 35,000,000 ounces or slightly more than in 1930. Of this total some 26,500,000 ounces have been shipped to London, about 10,000,000 ounces of which were reforwarded to Germany in an unrefined state. In addition, approximately 8,000,000 ounces were exported to China and a moderate amount was disposed of in India.

The Siamese Government disposed of about 20,000,000 ounces of silver as the result of the demonetization of their currency.

No sales of any importance were made by the British mint during 1931 as the result of the debasement of our coinage.

In addition to India, Spain and Persia appear to be the only important countries still possessing large quantities of redundant silver coins. Although sales by the latter are expected to be made, no realizations on government account have taken place up to date.

We estimate the total amount of silver available during 1931 from the sales of demonetized coins as approximately 57,000,000 ounces, or some 15,000,000 ounces less than in the previous year. This, together with the ordinary production of the metal, has made a total of about 252,000,000 ounces for which a market has had to be found, as compared with 315,000,000 ounces in 1930.

Coinage.—The only coinage operations of any importance during the past year have been for account of Germany, some 25,000,000 ounces of silver having been utilized for this purpose. Of this amount about 7,500,000 ounces of refined silver have been exported from London and in addition approximately 10,500,000 ounces in an unrefined state, representing part of the shipments by the Indian government, were reforwarded to Germany, the balance being accounted for partly by shipments direct from Mexico to Hamburg and partly by outright purchase in New York.

A contract has been completed by the London and Paris Mints for the manufacture of silver coins for Rumania and its is believed that some of the smaller European States are also contemplating the coinage of silver currencies.

India.—The consumption of silver by India during 1931 is estimated at about 60,000,000 ounces, of which nearly 49,000,000 ounces were shipped from London, of which more than 50 per cent took place in the first two months of the year. One of the features of the past year has been the entire liquidation of the substantial speculative oversold position, on account of the Indian bazaars, which has been in existence in London for some considerable time. Since the departure from the gold standard by this country in September when the position was finally covered the bazaar operators have shown little disposition to open speculative transactions, although some forward purchases were affected to a limited extent.

The stocks of rupees held by the Indian Treasury amounted to 12,299 lacs at the end of 1931 as compared with 11,999 lacs on the 31st of December, 1930, showing an increase of 300 lacs. Since the Indian shipments of gold commenced to be made at the end of September last, there has been a reduction of 955 lacs due to a large part of this gold having been exchanged for silver rupees, for which the concerted movement toward the nonacceptance of paper currency was chiefly responsible. Should the shipments of gold continue during 1932 this demand for rupees should at any rate temporarily affect the necessity of further sales of silver by the Indian government. However, at the moment there appears to be a very definite attempt to prevent the further exportation of capital, so that it will be of interest to see to what extent this will be successful in stopping the shipments of gold referred to.

As the result of the rise in the price of silver during the latter part of the year, large quantities of silver coins have found their way to Bombay from Persia, Iraq, and Afghanistan. These coins are manufactured into mint bars and sold in the bazaars.

Owing to the extremely poor upcountry demand, the stocks in Bombay have steadily increased to 9,000 bars at the end of 1931.

China.—We estimate the consumption of silver by China during 1931 at about 55,000,000 ounces as compared with 135,000,000 ounces in the previous year. Shipments from London have amounted to 13,000,000 ounces representing an

ncrease of about 5,500,000 ounces, although actually showing a depreciation in value owing to the low level of prices ruling during the greater part of the past year. It is some considerable time since the consuming capacity of China has fallen so low. The stocks of silver in Shanghai on the 26th of December were as follows:

Fifty-one million taels of sycee, 165,000,000 dollars, 5,560 bars as compared with 92,650,000 taels of sycee, 153,000,000 dollars, and 2,100 bars at the same period in 1930. The substantial decrease in sycee and increase in dollars is presumably due to the minting operations at Hangchow and other centers to a lesser degree.

While so many uncertain factors exist it is difficult to form any very definite opinion as to the outlook for silver during 1932. The substantial improvement which has taken place recently seems to have placed in the background any question of international action, at any rate for the time being. In the long run we believe that silver will improve in value to the pre-war level of about 24d., but this seems improbable until there is a more definite improvement in trade condition generally. Owing to the suspension of the gold standard it is unlikely that prices will again fall to the low level ruling throughout the greater part of 1931. As about 70 per cent of the world's production of the metal is in the form of a by-product, the agreed restrictions in existence now as to the production of copper should assist in preventing any increase in the amount of silver to be derived from natural sources during 1932.

Sales from demonetized coins will probably continue, but these have tended to decrease as time goes on and there is even a possibility that the conditions, which have necessitated the sales of surplus rupees by the Indian government in the past, may not be so pronounced during the coming year for the reasons already given.

Owing to the improved level of rates now ruling in certain commodities the purchasing power of India and China should tend to increase in the event of an improvement in the internal conditions of these two countries taking place.

The possibility of increased purchases of silver for currency purposes during 1932 must not be lost sight of as a factor in the absorption of the available supplies.

VALUES OF FOREIGN MONEYS, OCTOBER 1, 1932 [1]

Pursuant to section 522, Title IV, of the tariff act of 1930, reenacting section 25 of the act of August 27, 1894, as amended, the following estimates by the Director of the Mint of the values of foreign monetary units are hereby proclaimed to be the values of such units in terms of the money of account of the United States that are to be followed in estimating the value of all foreign merchandise exported to the United States during the quarter beginning October 1, 1932, expressed in any such foreign monetary units: *Provided, however,* That if no such value has been proclaimed, or if the value so proclaimed varies by five per centum or more from a value measured by the buying rate in the New York market at noon on the day of exportation, conversion shall be made at a value measured by such buying rate, as determined and certified by the Federal Reserve Bank of New York and published by the Secretary of the Treasury pursuant to the provisions of section 522, Title IV, of the rariff act of 1930.

A. A. BALLANTYNE,
Acting Secretary of the Treasury.

Values of foreign monetary units (at par as regards gold units; nongold units have no fixed par with gold)

Country	Legal standard	Monetary unit		Value in terms of United States money	Remarks
Argentine Republic	Gold	Peso		$0.9648	Currency: Paper normally convertible at 44 per cent of face value.
Austria	do	Schilling		.1407	
Belgium	do	Belga		.1390	1 belga equals 5 Belgian paper francs.
Bolivia	do	Boliviano		.3650	13⅓ bolivianos equal 1 pound sterling.
Brazil	do	Milreis		.5462	Currency: Government paper, convertible at 4.567 paper milreis to the gold milreis ($0.1196) by decree of May 23, 1928.
British Colonies in Australasia and Africa.	do	Pound sterling		4.8665

MONETARY LEGISLATION

[PUBLIC—No. 852—71ST CONGRESS]

[S. 6103]

AN ACT To authorize a change in the design of the quarter dollar to commemorate the two hundredth anniversary of the birth of George Washington

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That notwithstanding the provisions and limitations of section 3510 of the Revised Statutes, as amended, the Secretary of the Treasury is authorized and directed, for the purpose of commemorating the two hundredth anniversary of the birth of George Washington, to change the design of the twenty-five-cent piece so that the portrait of George Washington shall appear on the obverse, with appropriate devices on the reverse, of said piece. The new coins shall be issued for general circulation beginning in 1932, the year of the said bicentennial anniversary.

Approved, March 4, 1931.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production, import, export, and coinage of gold and silver, and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the Governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States ambassadors and ministers through the Department of State, and the replies in the form of reports, are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission and the available data for the calendar year under review are usually incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries the most reliable data available are used in compiling world statistics (tabulations at end of this volume). Where data other than from the interrogatory replies are used the source of the information is stated. Conversions of foreign moneys or values into United States equivalents have been made at the legal par rates unless otherwise stated (in the text).

Revised world tables for 1930 and tables for 1931, subject to revision, are printed at the end of this volume.

Detailed data that form the basis of the tables are regularly inserted at this point, but are necessarily omitted this year by reason of curtailment of funds available for printing.

SUMMARY OF WORLD STATISTICS

COINAGE OF NATIONS

CALENDAR YEAR 1930

WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND PAPER MONEY AT THE CLOSE OF THE YEARS 1930 AND 1931

The following compilations have been made from such data as are available. The amount of gold and silver in circulation in many countries is not obtainable, and in some countries that held by private banks can not be given.

For the United States the figures given cover all domestic gold and silver coin, but only such bullion and foreign coins as owned by the Government and Federal reserve banks. All foreign coin which comes into possession of the Government is converted into bullion.

Population figures are principally from United States Commerce Yearbook, 1931.

Monetary stock of principal countries of the world, end of calendar year 1930

[Stated in United States money (000 omitted), except paper circulation, which is stated in monetary unit of issuing country (000 omitted)]

[1] From United States Mint interrogatories and/or published official sources.
[2] Includes, in addition to holdings of central banks and governments, holdings of other banks where authenticated.
[3] Data known to be incomplete.
[4] In part held abroad, either reported as earmarked (set aside and not included in the claimed assets of the holding institution, as opposed to being merely deposited abroad or representing a receivable balance) or considered to be earmarked by U. S. Federal Reserve Board experts.
[5] Gold and silver.
[6] Estimated silver circulation included.
[7] United States bank notes.
[8] United States Government notes.
[9] Prior year's figures.
[10] Exclusive of Canadian bank notes which are the principal circulating media.
[11] Panama coin only. In addition to this, there is circulating an unknown amount of silver.
[12] United States currency.
[13] In Trinidad dollars.
[14] June 30, 1930.
[15] Paper peso currency legally convertible at 44 per cent of face value.
[16] Equivalent of old milreis; value of paper currency fixed at 4.567 paper milreis to the gold milreis ($0.1196) for payment of public dues.
[17] Includes base metal coin.
[18] On Jan. 2, 1931.
[19] Exclusive of Spanish bank notes and British treasury notes.
[20] Almost the entire amount held abroad.
[21] British currency.
[22] Includes platinum, etc.
[23] Incomplete.
[24] Fluctuates with the price of silver.
[25] Gold standard established by decree of May 1, 1930.
[26] Monetary standard not established.
[27] Estimate.
[28] Gold standard established by decree of Mar. 18, 1930; notes are stated in old krans.
[29] Mar. 21, 1930 (end of Persian year).
[30] Sarawak coin and notes; Straits coin and notes also circulate.
[31] May, 1930.
[32] Used also in Irish Free State.
[33] Australian notes.

[1] From United States Mint interrogatories and/or published official sources.
[2] Includes, in addition to holdings of central banks and governments, holdings of other banks where authenticated.
[3] Data known to be incomplete.
[4] In part held abroad, either reported as earmarked (set aside and not included in the claimed assets of the holding institution, as opposed to being merely deposited abroad or representing a receivable balance) or considered to be earmarked by U. S. Federal Reserve Board experts.
[5] Gold and silver.
[6] Estimated silver circulation included.
[7] Prior year's figures.
[8] United States bank notes.
[9] United States Government notes.
[10] U. S. currency also circulates.
[11] Exclusive of Canadian bank notes which are the principal circulating media.
[12] Panama coin only. In addition to this, there is circulating an unknown amount of silver.
[13] U. S. currency.
[14] June 30, 1931.
[15] Paper peso currency legally convertible at 44 per cent of face value.
[16] Includes base metal coin.
[17] Incomplete.
[18] Fluctuates with price of silver.
[19] Dollar coins circulating, estimated at two billion.
[20] Monetary standard not established.
[21] Sarawak coin and notes; Straits coin and notes also circulate.
[22] On Jan. 7, 1932.
[23] Exclusive of Spanish bank notes and British treasury notes.
[24] Used also in Irish Free State.
[25] British currency.
[26] Australian notes.
[27] Estimate.
[28] Equivalent of old milreis; value of paper currency fixed at 4.567 paper milreis to the gold milreis ($0.1196) for payment of public dues.
[29] Includes platinum.
[30] In Trinidad dollars.

WORLD PRODUCTION OF GOLD AND SILVER

[1] Average price per fine ounce in London for 1930, and in New York for 1931.
[3] Estimate based on United States imports of ore and bullion and interrogatory data.
[4] Estimate based on other years' production.
[5] Last year's figures.
[6] Amount exported.

Production of gold and silver in the world since 1860

[The annual production of 1860 to 1872 is obtained from 5-year-period estimates compiled by Dr. Adolph Soetbeer. Since 1872 the estimates are those of the Bureau of the Mint]

Calendar year	Gold		Silver	
	Fine ounces	Value	Fine ounces	Commercial value [1]
1860	6,486,262	$134,083,000	29,095,428	$39,337,000
1861	5,949,582	122,989,000	35,401,972	46,191,000

[1] Valued, prior to 1701, at $1.38 per fine ounce, which corresponds with a commercial ratio of silver to gold of approximately 15 to 1, the ratio which prevailed for over 100 years subsequent to 1687, as per tabulation elsewhere in this volume. From 1701 to 1840 the value corresponds with the average ratios of silver to gold as per the tabulation elsewhere in this volume. From 1841 the annual averages per fine ounce in London are used except for the years 1915 to 1921, and 1931, when London prices were not equivalent to gold and New York prices are used. Tabulations of silver quotations appear elsewhere in this volume.

Director of the Mint

LETTER OF TRANSMITTAL

DEPARTMENT OF THE TREASURY,
BUREAU OF THE MINT,
Washington, D. C., January 3, 1955.

SIR: In compliance with the provisions of section 345 of the Revised Statutes of the United States, I have the honor to submit a report on the operations of the mints, assay offices, and bullion depositories of the United States for the fiscal year ended June 30, 1954. This is the Eighty-second Annual Report of the Director of the Mint since the establishment in 1873 of the Bureau of the Mint in the Department of the Treasury. Annual reports of mint activities, however, have been made since the first mint was authorized in 1792. The annual report of this Bureau on United States production and consumption of gold and silver for the calendar year 1953 is also submitted.

Respectfully,

Wm. H. Brett
Director of the Mint.

Hon. G. M. HUMPHREY,
Secretary of the Treasury.

INDEX 157

REPORT ON OPERATIONS OF THE BUREAU OF THE MINT, FISCAL YEAR 1954

The principal functions of the Bureau of the Mint are the manufacture of coins and the acquisition and continuous safeguarding of the Government's holdings of the monetary metals. Gold, silver, coins, and other values in custody of the Mint during the fiscal year 1954 totaled over $24 billion.

The Mint manufactures all domestic coins for the United States, its possessions, and other areas where United States coins are legal tender. Foreign coins are also manufactured on a reimbursable basis for other governments, when orders can be met without impeding the required domestic coinage. Over a period of years, the Mint has made foreign coins for 36 different governments.

Gold and silver deposits are received in many forms, requiring assaying, melting, refining, and other forms of processing, also movement and storage. Disposition of gold and silver includes the exchange of fine bars for bullion deposited; the sale of bars, including the sale of gold for domestic industrial, professional, and artistic use; and the withdrawal of gold in connection with the settlement of international balances. Treasury licenses required for the acquisition, ownership, possession, use, and exportation of gold are issued by the Mint.

Other activities of the Mint include the manufacture of medals of a national character and special medals for other Government agencies, and the performance of miscellaneous services for the Government and the public.

The number of employees of the Bureau ranged from 1,011 at the beginning of fiscal year 1954 to 883 at the close of the year in seven field institutions and the Office of the Director in Washington, D. C. Institutions consist of three coinage mints located in Philadelphia, Pennsylvania, San Francisco, California, and Denver, Colorado; two assay offices located in New York City and Seattle, Washington; and two bullion depositories, one for gold at Fort Knox, Kentucky, and one for silver at West Point, New York which operates as an adjunct of the New York Assay Office. Electrolytic refineries are located in the Denver and San Francisco Mints, and the New York Assay Office. The Medal and Engraving Division is located in the Philadelphia Mint, and "proof" coins are also manufactured there.

The three mints manufactured a total of 1,452 million United States coins with a face value of $100 million during the fiscal year 1954, as follows:

Denomination	Number of pieces produced	Face value	Gross weight[1]
	In millions		Short tons
1-cent pieces	835	$8	2,862
5-cent pieces	162	8	894
Dimes	284	29	781
Quarter dollars	121	30	835
Half dollars	50	25	690
Total	1,452	100	6,062

[1] Includes 2,076 tons silver; 3,620 tons copper; 223 tons nickel; and 143 tons zinc and tin.

In addition to domestic coinage, the Philadelphia Mint manufactured 18 million foreign coins containing 78 tons of metals for the Governments of Costa Rica, Cuba, and the Dominican Republic. The San Francisco Mint manufactured 20 million coins containing 76 tons of metals for the Government of El Salvador.

The Mint was assigned additional duties in connection with the distribution of United States coins during the year. Treasury Department Order No. 179, effective December 1, 1953, transferred from the Treasurer of the United States to the Bureau of the Mint functions pertaining to distribution and transfer of current and uncurrent coins among the Mints, Federal Reserve Banks, Federal Reserve branches, the Treasurer of the United States, and such other persons or institutions as necessary.

Requisitions of coins for circulation totaled 1,213 million pieces during the fiscal year. Details are as follows:

Denomination	Number of pieces shipped	Face value	Gross weight
	In millions		Short tons
1-cent pieces	813	$8	2,786
5-cent pieces	132	7	725
Dimes	171	17	471
Quarter dollars	70	18	486
Half dollars	18	9	251
Silver dollars	9	9	273
Total[1]	1,213	68	4,992

[1] Includes 180,322 sets of proof coins sold.

The estimated stock of coins in the United States and its possessions, including coins held in the Treasury, banks, and in the hands of the public, is compared at the beginning and close of the fiscal year 1954 in the following statement:

Stock of coins	Face value (in millions)		
	July 1, 1953	June 30, 1954	Net change
Silver dollars	$491.5	$491.0	-$0.5
Subsidiary silver coins	1,193.8	1,275.7	+81.9
Minor coins	418.7	434.7	+16.0
Total	2,104.0	2,201.4	+97.4

Gold holdings of the mint institutions ranged from 641.8 million fine ounces valued at $22,462.7 million at the beginning of the fiscal year 1954 to 626.5 million fine ounces valued at $21,926.9 million at the close of the year, a net decrease of 15.3 million ounces valued at $535.8 million. Transactions, excluding intermint transfers, are summarized for the fiscal year 1954 in the following table.

Gold transactions, excluding intermint transfers (in millions)

	Ounces	Value
Gold received		
Newly mined domestic gold	1.5	$51.0
Secondary gold from domestic sources	.2	7.7
U. S. coin, foreign deposits, operative recoveries, etc	.2	8.8
	1.9	[1] 67.5
Gold withdrawn		
Sold for domestic industry, profession, or art	1.0	33.8
Gold bar payment for gold deposits	.1	4.4
Withdrawn by the Treasury for monetary purposes	16.1	565.1
	17.2	603.3

[1] Includes $370.32 increment on gold coin and bullion received at $20.67+ per fine ounce.

Silver bullion holdings of the Bureau of the Mint ranged from 1,339.1 million fine ounces valued at $1,685.0 million at the beginning of the fiscal year 1954 to 1,437.4 million fine ounces valued at $1,850.9 million at the close of the year, a net increase of 98.3 million ounces valued at $165.9 million. Transactions, excluding intermint transfers, are summarized for the fiscal year in the following table.

Silver transactions, excluding intermint transfers (in millions)

	Ounces	Value
Silver received		
Newly mined domestic silver	33.8	$30.5
Secondary silver from domestic sources	.5	.4
Recoinage bullion from uncurrent U. S. coins withdrawn from circulation	1.3	1.7
Leased Treasury silver returned by other agencies of the Federal Government	119.4	154.4
Purchase from Reconstruction Finance Corporation	4.2	3.0
Foreign deposits, operative recoveries, etc	.1	.1
Seigniorage on bullion revalued as security for silver certificates	.....	9.4
	159.3	199.5
Silver disposed of		
Manufactured into U. S. subsidiary coins	60.5	33.2
Silver bar payment for silver deposits	.5	.4
Sold in medals, sweeps, etc	([1])	([1])
	61.0	33.6

[1] Less than 50,000 ounces or dollars.

Under the terms of a formal agreement, dated May 6, 1942, between the Treasury Department and the Defense Plant Corporation, 524,818,002.72 fine troy ounces of Treasury silver bullion, in the form of 1,000 ounce commercial bars, were loaned to the Defense Plant Corporation during the fiscal years 1942 and 1943. This silver was to be used for non-consumptive purposes in defense plants throughout the country to relieve a critical shortage of copper. The entire amount of silver loaned was delivered from the

New York Assay Office and the West Point Bullion Depository, from the Silver Purchase Act (June 19, 1934) account. The agreement, which called for the return of silver in the same form and fineness as delivered, was subsequently transferred to the Reconstruction Finance Corporation.

A large portion of the leased silver was fabricated into electrical conductors (bus-bars) for installation in aluminum and magnesium plants and other factories engaged in war work. After the war, when these installations were no longer required, the Corporation was confronted with the problem of having the silver melted into its original form and returned to the Mint. After obtaining estimates on the cost of melting the silver, from several private industrial concerns, it was determined that it would be far more economical to return it to the Mint in bus-bar form, and have it melted into 1,000 ounce bars, or coinage ingots, in the Mint. Arrangements were accordingly made for the return of all silver held by the Corporation to the Mint, to be held in custody account until melted into bars or coinage ingots, with reimbursement to the Mint for melting and related costs.

Silver was accordingly returned to Mint plants, chiefly during the fiscal year 1947, in the following amounts:

Mint institution	Fine ounces returned
Philadelphia Mint	99,654,086.09
Denver Mint	229,536,848.37
New York Assay Office	195,627,068.26
Total	524,818,002.72

In addition to the above amounts, the Corporation accumulated a reserve amount of several million ounces to provide for melting losses, which was later made available to the Mint.

The silver melting program was commenced during the fiscal year 1947 and completed in May 1954. The silver melting program was purposely continued over a period of several years in order that a greater portion of the bus-bars could be melted direct into coinage ingots. Permanent receipts were issued to the Corporation after each lot was melted, and the silver, including the reserve amount, was taken into the various silver accounts in the following amounts:

Account returned to:	Fine troy ounces
Silver Securing Certificates	400,000,000.00
Silver Purchase Act Silver	124,818,002.72
Silver Bullion Ordinary	4,242,879.13
Total	529,060,881.85

All silver was originally loaned from the Silver Purchase Act account. As the balance of silver in the Mints available for coinage became depleted, "book transfers" were made periodically transferring (a) Silver Purchase Act silver to the Mint, and (b) a like amount of Silver Securing Certificates to the Corporation.

After credit was given to the Corporation for the 524,818,002.72 fine troy ounces of silver loaned, the Mint purchased the reserve amount of 4,242,879.13 fine ounces as Silver Bullion Ordinary, at 71+ cents per fine ounce, and deposited the proceeds amounting to $3,012,444.18 into the Treasury as a miscellaneous receipt on June 15, 1954. A full accounting of the above transactions was made to the Reconstruction Finance Corporation in June 1954 and it was mutually agreed by the Corporation and the Treasury Department that the entire transaction was satisfactorily concluded.

Revenues deposited by the Bureau of the Mint into the general fund of the Treasury during the fiscal year 1954 totaled $73.8 million and were composed principally of seigniorage. Seigniorage on silver subsidiary coinage amounted to $50.4 million, on minor coinage $13.5 million, and on silver bullion revalued from cost to monetary value as security for silver certificates, $9.4 million.

Internal audit:

The scope of the internal audit program was expanded during the fiscal year and included the following:

(1) Appraisal and review in the Washington office of financial statements and reports submitted periodically by the field institutions.

(2) Audit surveys of the field institutions.

(3) Annual settlements at the mints and assay offices and inspection of "joint seals" at the bullion depositories.

Typical auditing actions included:

(1) Review of accounting procedures and practices at the field plants.

(2) Review and examination of storekeeping and inventory procedures.

(3) Spot check of stores inventories by physical count, of a representative number of selected items.

(4) Review of deposit procedures for compliance with mint regulations.

(5) Audit of cash transactions and verification of cash balances under the control of mint cashiers.

(6) Review of imprest fund transactions and verification of cash balances under the control of imprest fund cashiers.

(7) Audit of proof coin and medal sales at Philadelphia and verification of medal inventory.

(8) Review and appraisal of protection and security measures in effect at the various field installations.

(9) Physical verification by weight and/or count of all gold and silver bullion, coin, cash and all other monetary assets not under "joint seal".

The results of the internal audit work performed indicate that:

(1) The accounting records are reliable and afford a full disclosure of the financial results of operations at the field plants.

(2) Reports submitted by the field establishments to the Washington office are in agreement with and supported by the accounting records.

(3) Prescribed accounting procedures are generally being observed.

(4) Mint regulations with respect to the receipt, processing, and payment of bullion deposits are being observed.

(5) Control over monetary assets, stores, equipment and other values are satisfactory and adequate.

(6) Protective and security measures in force are effective and provide adequate protection for the values in custody of the various mint establishments.

Management improvement:

The management improvement program of the Bureau of the Mint continued actively during the fiscal year 1954. Management surveys of the coinage mints and the New York Assay Office, with emphasis on changes in organization and procedures for the purpose of reducing costs, were completed. Estimated annual savings resulting from the program are summarized in the following statement:

Management improvement program, Bureau of the Mint, fiscal year 1954

Description	Estimated annual savings
1. Shipment of minor coins in truckload lots by motor carrier and silver coins by armored truck where available, instead of Railway Express or Parcel Post	$250,000
2. Elimination of unnecessary guard posts	38,000
3. Elimination of repeated weighing of coinage metals between processes	38,000
4. Elimination of transfer weighing of coinage metals between melting and refining and coining divisions	36,000
5. Consolidation of cashier's and deposits divisions	20,000
6. Installation of overhead cranes handling 500-pound containers to deliver blanks to presses and remove finished coins from presses at Philadelphia. Eliminates manual handling and number of operators	15,000
7. Construction of underground bins for copper and improved coin storage and loading facilities at Denver	9,000
8. Design and construction of conveyor layout for handling silver bullion after casting operation at N. Y. Assay Office. Eliminates manual handling of 1,000 ounce bars during stamping, cleaning, and inspection operations	5,000
9. Installation of new annealing furnace and cleaning and drying equipment at San Francisco. Reduces cost of cleaning agents and number of operators	5,000
10. Transfer to N. Y. Assay Office of gold sales from Denver and mail deposit transactions from Philadelphia, and elimination of excess work connected with gold deposits and sales	4,300
11. Construction and use of grapple lifting 24 gold bars at one time by N. Y. Assay Office. Eliminates manual lifting of bars one at a time on and off truck or scale. Also decreases possibility of injury to employees	4,000
Total recurring annual savings to Mint operating appropriation and funds[1]	424,300

[1] In addition, a warehouse formerly used by the Philadelphia Mint was released with annual savings to GSA of $5,700, and a total of $32,898 was deposited as general fund receipts from the sale of surplus and obsolete supplies and equipment.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES FOR THE CALENDAR YEAR 1953

REPORT ON UNITED STATES PRODUCTION OF GOLD AND SILVER, CALENDAR YEAR 1953

The official United States Government estimate of domestic gold and silver production, made annually by the Bureau of the Mint, is based upon arrivals of these metals at Government Mints and Assay Offices and at privately owned refineries. The Mints and Assay Offices determine the State source of all newly mined unrefined material at the time deposits are received. The State source of material received by private refiners is determined from information submitted by them and by intervening smelters, mills, and other plants involved in the reduction processes.

During the calendar year 1953 the Mints and Assay Offices received deposits containing 1,429,870 fine ounces of newly mined domestic gold, with a value of $50,045,464. This was an increase of 2.1 percent, or more than $1 million over the amount received in 1952 when deposits totaled 1,400,863 fine ounces with a value of $49,020,196. Arrivals in 1953 included 518,757 fine ounces in unrefined material mined in 12 States and the Territory of Alaska, and 911,113 fine ounces of bullion from private refineries. The Philadelphia, San Francisco, and Denver Mints and the New York and Seattle Assay Offices received the following deposits of newly mined domestic gold in 1953:

Newly mined domestic gold received by United States Mints and Assay Offices, calendar year 1953, in fine ounces (to thousandths of an ounce)

United States production of gold in 1953, including deposits made at Government Mints and Assay Offices and the various private refineries during the year, amounted to 1,970,000 fine ounces valued at $68,950,000. This was a gain of 2.2 percent over the previous calendar year's production of 1,927,000 fine ounces valued at $67,445,000. South Dakota was the State of leading production, followed by Utah, Alaska, and California. Percentage-wise, South

Dakota's production was 12.8 percent greater than in 1952, Utah's, 2.8 percent, and Alaska's, 6.1 percent. A decrease in 1953 production caused California to rank fourth instead of third as in 1952, with Alaska moving from fourth place in 1952 to third in 1953. The combined output of the four accounted for over three-fourths of the total production. Output of the 16 producing States and the Territory of Alaska is shown in the following table.

Production of gold in the United States during the calendar year 1953 (based upon arrivals at United States Mints and Assay Offices and at private refineries)

State in which mined	Fine ounces	Value at $35 per fine ounce	State in which mined	Fine ounces	Value at $35 per fine ounce
Alaska	265,100	$9,278,500	South Dakota	532,900	$18,630,500
Arizona	112,000	3,920,000	Tennessee	260	9,100
California	240,000	8,400,000	Texas	8	280
Colorado	122,000	4,270,000	Utah	462,800	16,198,000
Idaho	26,000	910,000	Vermont	170	5,950
Montana	24,600	861,000	Washington	62,500	2,187,500
Nevada	110,000	3,850,000	Wyoming	2	70
New Mexico	2,700	94,500			
Oregon	8,300	290,500	Total[1]	1,970,000	68,950,000
Pennsylvania	1,260	44,100			

[1] Grand total production 1792-1953 amounts to 290,168,171 fine ounces. The last published annual summary (1792-1951) appears on page 16 of the 1952 Annual Report.

During the calendar year 1953 the Mints and Assay Offices received 33,426,620 fine ounces of newly mined domestic silver, consisting of 912,401 fine ounces in unrefined materials mined in 12 States and the Territory of Alaska, and 32,514,219 fine ounces of bullion from private refineries. Of the total 33,426,620 ounces received, 33,401,827 ounces qualified under the act of July 31, 1946 with return to the depositors of 90.50505 cents per fine ounce, or a total return of $30,230,340. Newly mined domestic silver received as "bullion ordinary" amounted to 24,793 ounces with a total cost of $21,013. Bullion ordinary is purchased at a rate approximating the open market price at the time purchased.

The silver bullion market in New York opened in 1953 with a quotation of 83-1/4 cents per ounce of 0.999 fineness. Changes in price were made on four days in January, as follows: - January 13, 83-3/4 cents, January 14, 84-1/4 cents, January 15, 84-3/4 cents, and January 16, 85-1/4 cents. The last named quotation remained in effect through the remainder of 1953.

The Philadelphia, San Francisco, and Denver Mints and the New York and Seattle Assay Offices received the following deposits of newly mined domestic silver in 1953:

[1] Includes newly mined silver received at 90.50505 cents per fine ounce (act of July 31, 1946), and also newly mined silver purchased as "bullion ordinary".

United States production of silver in 1953, including deposits made at Government Mints and Assay Offices and the various private refineries during the year, amounted to 37,735,500 fine ounces, compared with 39,840,300 fine ounces in 1952. Idaho was the State of leading production, followed by Utah and Montana. These three States accounted for approximately three-fourths of the total output. Output for the 19 producing States and the Territory of Alaska is shown in the table following. Values shown in the table are calculated at 90.50505 cents per fine ounce.

Production of silver in the United States during the calendar year 1953 (based upon arrivals at United States Mints and Assay Offices and at private refineries)

State in which mined	Fine ounces	Value at $0.9050505 per fine ounce	State in which mined	Fine ounces	Value at $0.9050505 per fine ounce
Alaska	37,000	$33,487	Oregon	11,000	$9,956
Arizona	4,370,000	3,955,071	Pennsylvania	7,700	6,969

New York	37,300	33,758			

[1] Less than one fine ounce or $1.00.
[2] Grand total production 1792-1953 amounts to 4,184,669,830 fine ounces. The last published annual summary (1792-1951) appears on page 18 of the 1952 Annual Report.

345738 O - 55 - 2

REPORT ON GOLD AND SILVER CONSUMPTION IN THE UNITED STATES, CALENDAR YEAR 1953

The official United States Government estimate of consumption of gold and silver in the United States, made annually by the Bureau of the Mint, represents the net quantity of gold and silver issued for domestic industrial, professional, and artistic use. From the total amount issued for such purpose in a given year by Government Mints and Assay Offices, private refiners, and dealers, is deducted the amount of gold and silver in the form of old jewelry, plate, scrap, etc. that are returned to the same concerns during the same period. The statement following summarizes these data for the calendar year 1953.

GOLD AND SILVER ISSUED FOR USE IN INDUSTRY AND THE ARTS IN THE UNITED STATES, CALENDAR YEAR 1953

Item	Gold		Silver
	Fine troy ounces	*Value*	*Fine troy ounces*
Government-stamped bars issued by United States Mints and Assay Offices	1,581,390	$55,348,675	543,900
Bullion in various forms issued by private refiners and dealers	1,629,439	57,030,366	124,845,300
	3,210,829	112,379,041	125,389,200
Old jewelry, plate, scrap, etc., returned to private refiners, dealers, and to monetary use	1,067,969	37,379,041	19,389,200
Net amount of material issued	2,142,860	75,000,000	106,000,000

REVIEW OF GOLD AND SILVER MINING INDUSTRY FOR THE CALENDAR YEARS 1952 AND 1953

A review of the gold and silver mining industry in the various States and Alaska, for which acknowledgment is made to the Bureau of Mines, United States Department of the Interior, follows. It should be noted that production figures stated therein are based on a mine canvass of recoverable metal and, due principally to the time lag involved before this material reaches the mints and assay offices and private refineries, will not necessarily agree, on a yearly basis, with the figures published by the Bureau of the Mint.

ALASKA

Gold continued to be the commodity with the greatest value of output in Alaska in 1952. Production was 240,557 fine ounces (in terms of recoverable metals) valued at $8,419,495 in 1952, compared to 239,637 fine ounces valued at $8,387,295 in 1951. Rather than a reversal of the general trend downward that has characterized the industry since 1947, this slight increase indicated a stabilization or leveling-off, the main bulk of the gold being produced by a relatively few well-established companies. Of the 32,986 fine ounces of silver valued at $29,854 produced in Alaska in 1952, compared to 32,870 fine ounces valued at $29,749 in 1951, 99 percent was a byproduct of gold placer mining, with the remaining one percent from dry gold ore and old tailings milled and lead ore smelted.

Production of gold was higher than might have been supposed considering the adverse economic conditions under which the gold miners continued to operate, and despite the fact that there was a 15-percent drop in the total number of operations producing gold; 5 operations were classed as lode gold mines, and 119 as placer gold mines in 1952 compared with 6 and 140, respectively, in 1951. Higher-than-ever cost of labor (in competition with high wage rates paid on construction projects under Government contract) and the high cost of materials and supplies coupled with an unchanged established U. S. Treasury price of $35 per fine ounce of gold caused the cessation of activity at numerous gold mining operations and curtailment at others.

The sale of unprocessed or "natural" gold on the open market at prices in excess of $35 per fine ounce apparently was considerably less in volume than in 1951. The recorded production for 1952 included 998 fine ounces of gold contained in natural gold reported by two operators as having been sold on the open market. Specific and accurate data regarding natural gold sales are not readily obtainable. It is possible that some natural gold was produced and sold concerning which no information was available; the quantities involved are believed to be relatively small.

Placer mines accounted for 99.5 percent of the total gold produced in Alaska in 1952. Most of the gold came from a few mines; the 15 leading gold-producing mines (all placer) in Alaska in 1952 yielded 87 percent of the total recorded gold output of the Territory. The leading five producers (all placer and using bucket-line dredges), which supplied 76 percent of the total Alaska output of gold, were in order of output: United States Smelting, Refining & Mining Co., Fairbanks Unit, Fairbanks district; United States Smelting, Refining & Mining Co., Nome Unit, Nome district; New York Alaska Gold Dredging Corp., Aniak district; Callahan Zinc-Lead Co., Tolovana district; and Casa de Paga Gold Co., Fairhaven district. In comparison, in 1951 the 15 leading gold-producing mines (all placer) in Alaska yielded 83 percent of the total recorded gold output, and the 5 leading producers (all using bucket-line dredges) supplied 67 percent of the total Alaskan output.

The leading five producers of gold recovered 75 percent of the total silver output in Alaska in 1952. The most important producer of silver in Alaska in 1952 was the United States Smelting, Refining & Mining Co., which recovered silver as a byproduct of bucket-line dredging operations in the Fairbanks district, Yukon River region, and the Nome district, Seward Peninsula region.

Gold output in Alaska in 1953 increased 5.5 percent above the 1952 output to reach the highest level since 1950. The recorded production of gold was 253,783 fine ounces valued at $8,882,405 in 1953, compared to 240,557 fine ounces valued at $8,419,495 in 1952. Silver output increased 7 percent to 35,387 fine ounces valued at $32,027 in 1953 from 32,986 fine ounces valued at $29,854 in 1952.

The increased output of gold was unexpected considering the high cost of labor and supplies and an unchanged established United States price of $35 per fine ounce of gold.

Part of the increase resulted from the sale of gold during 1953 that had been produced in prior years. The quantity of gold sold on the open market as "natural gold" at prices above $35 per fine ounce was insignificant according to available information. The increased output of silver reflects the increased output of gold because most of the silver was recovered as a byproduct of gold from placer mining.

Three operations classed as lode mines, and 148 operations classed as placer mines produced gold in Alaska in 1953 compared to 6 and 119 respectively in 1952. Placer mines supplied all of the gold in 1953 except for 667 fine ounces produced from lode mines. The leading 5 producers of gold in 1953 (all placer operations using bucket-line dredges) supplied 72 percent (76 percent in 1952) of the Alaskan total gold output. In 1953 the leading 5 operations (listed in order of output) were: United States Smelting, Refining & Mining Company, Fairbanks Unit, 6 dredges in the vicinity of Fairbanks; United States Smelting, Refining & Mining Company, Nome Unit, 3 dredges in the vicinity of Nome; New York Alaska Gold Dredging Corporation, 2 dredges at Nyac; Callahan Zinc-Lead Company, 1 dredge at Livengood; and Alluvial Gold Company, 1 dredge at Woodchopper near Circle.

Bucketline dredges (23 in 1951, 1952, and 1953) operated by 14 companies recovered 78 percent of the total placer gold in 1953 (83 percent in 1952); nonfloating washing plants (gravel is mechanically handled by using bulldozer-dragline-hydraulic equipment either separately or in combination) supplied 21 percent (16 percent in 1952); and hydraulic and small-scale hand operations supplied the remaining 1 percent.

The total production of gold (lode and placer) in Alaska, in terms of recoverable metal, from 1880 through 1953 has been 27,937,150 fine ounces valued at $689,832,306.

Ninety-seven percent of the silver produced in Alaska in 1953 was recovered as a byproduct of gold from placer mining; the remaining 3 percent was recovered from gold ore milled, gold ore and lead ore smelted, and concentrate from cleanup at mills. The leading 5 producers of gold recovered 76 percent (75 percent in 1952) of the total silver output in Alaska in 1953. The United States Smelting, Refining & Mining Company was the principal producer of silver. The company recovered silver as a byproduct of gold from dredging operations in the Fairbanks and Nome districts.

The total production of silver (lode and placer) in Alaska, in terms of recoverable metal, from 1880 through 1953 has been 20,092,829 fine ounces valued at $14,370,767.

ARIZONA

Gold production in Arizona in 1952 was 112,355 fine ounces valued at $3,932,425, a loss of 3,738 ounces (3 percent) from the output of 116,093 fine ounces in 1951 valued at $4,063,255. The loss in production of gold from zinc-lead ore and zinc-copper ore more than offset the gain from copper ore and siliceous ores. Most of the gold, as well as silver, produced in the State is a byproduct of copper ore and zinc-lead ore; in 1952 copper ore yielded 83,692 ounces of gold (74 percent of the State total) compare with 83,521 ounces in 1951 and zinc-lead ore 19,236 ounces (17 percent of the State total) compared with 22,182 ounces in 1951. Zinc-copper ore supplied 5,115 ounces of gold (7,507 ounces in 1951); lead ore and lead-copper ore 264 ounces (297 ounces in 1951); siliceous ores, 2,433 ounces (1,933 ounces in 1951); and zinc ore, 40 ounces (15 ounces in 1951). Old tailings and smelter and mill cleanings supplied 1,505 ounces of gold (482 ounces in 1951), and placers 70 ounces (156 ounces in 1951).

The quantity of gold recovered from lode mines decreased from 115,937 ounces in 1951 to 112,285 ounces in 1952. Concentrates smelted yielded 86,879 ounces of gold; crude ore, old tailings, etc., smelted 25,020 ounces; and ore amalgamated, 386 ounces.

Nearly 92 percent of the State gold output in 1952 came from six districts--Ajo, Big Bug, Copper Mountain (Morenci), Pioneer (Superior), Verde (Jerome), and Warren (Bisbee). The output from these districts decreased from 106,919 ounces in 1951 to 102,939 ounces in 1952. The New Cornelia mine of the Phelps Dodge Corp., Pima County, continued to be the leading gold producer in Arizona. It was followed by the

Copper Queen (Bisbee) branch of the Phelps Dodge Corp., Cochise County; the Iron King mine, Yavapai County. the Magma mine, Pinal County; the Morenci branch of the Phelps Dodge Corp., Greenlee County; and the United Verde branch of the Phelps Dodge Corp., Yavapai County. These six properties, all copper mines except the Iron King and part of the Copper Queen, produced more than 91 percent of the State total gold, and four of the six properties, owned by the Phelps Dodge Corp., produced 66 percent of Arizona's gold output in 1952.

The total gold production in Arizona, in terms of recoverable metal, from 1860 through 1952 has been 11,529,260 ounces valued at $291,019,255.

The output of recoverable silver in Arizona in 1952 was 4,701,330 fine ounces valued at $4,254,941, a decrease of 8 percent in quantity and value compared with the 1951 output of 5,120,985 fine ounces valued at $4,634,750. A decline in production of silver from copper ore, zinc-copper ore, zinc-lead ore, lead ore, and siliceous ores in 1952 caused a decrease in Arizona's silver output. In 1952 copper ore yielded 2,900,851 ounces of silver (62 percent of the State total), a decrease of 187,014 ounces (6 percent) from 1951, and zinc-lead ore 1,122,474 ounces (24 percent of the State total), a decrease of 20,722 ounces (2 percent). Zinc-copper ore yielded 458,644 ounces of silver (602,083 ounces in 1951); siliceous ores, 162,804 ounces (248,210 ounces in 1951); lead ore, 20,083 ounces (20,839 ounces in 1951); and zinc-lead-copper ore, zinc ore, and lead-copper ore, 19,763; and old tailings and smelter and mill cleanings, 16,701 ounces. Concentrates smelted yielded 3,421,122 ounces of silver; crude ore, old tailings, etc., smelted, 1,280,062 ounces; and ore amalgamated, 136 ounces. Placers yielded 10 ounces of silver.

About 79 percent of the State total silver in 1952 came from seven districts--Ajo, Big Bug, Copper Mountain (Morenci), Mineral Creek (Ray), Pioneer (Superior), Verde (Jerome), and Warren (Bisbee). The output from these districts decreased from 4,143,150 ounces in 1951 to 3,732,069 ounces in 1952. The Phelps Dodge Corp., with 15 percent less output than in 1951, continued to be the chief silver producer in Arizona; its four properties (Copper Queen, Morenci, New Cornelia, and United Verde) produced nearly 50 percent of the State silver output in 1952. Other large silver producers were the Magma, Iron King, Ray (Kennecott Copper Corp.), Flux, Ash Peak, and San Xavier (The Eagle-Picher Co.) properties.

The total silver production in Arizona, in terms of recoverable metal, from 1860 through 1952 has been 322,212,730 ounces valued at $243,986,370.

Gold production in Arizona in 1953 was 112,824 fine ounces valued at $3,948,840, a gain of only 469 ounces over the output of 112,355 fine ounces in 1952, valued at $3,932,425. The increase of 6,032 ounces in production of gold from copper ore more than offset the decrease of 5,335 ounces from lead-zinc ore and copper-zinc ore. Most of the gold, as well as silver, produced in the State was a byproduct of copper ore and lead-zinc ore; in 1953 copper ore yielded 89,724 ounces of gold (80 percent of the State total) compared with 83,692 ounces in 1952 and lead-zinc ore 17,872 ounces (16 percent of the State total) compared with 19,236 ounces in 1952. Copper-zinc ore supplied 1,144 ounces of gold (5,115 ounces in 1952); lead ore 1,339 ounces (262 ounces in 1952); siliceous ores, 2,036 ounces (2,433 ounces in 1952); and zinc ore and copper-lead ore, 18 ounces (42 ounces in 1952). Old tailings and smelter and mill cleanings supplied 582 ounces of gold (1,505 ounces in 1952), and placers 109 ounces (70 ounces in 1952).

The quantity of gold recovered from lode mines increased from 112,285 ounces in 1952 to 112,715 ounces in 1953. Concentrates smelted yielded 84,293 ounces of gold; crude ore, cleanings, and old tailings smelted 28,350 ounces; and ore amalgamated, 72 ounces.

Approximately 93 percent of the State gold output in 1953 came from five districts--Ajo, Big Bug, Copper Mountain (Morenci), Pioneer (Superior), and Warren (Bisbee). The output from these districts increased from 98,610 ounces in 1952 to 104,602 ounces in 1953. The New Cornelia mine of the Phelps Dodge Corp., Pima County, continued to be the leading gold producer in Arizona. It was followed by the Copper Queen mine

of the Phelps Dodge Corp., Cochise County; the Iron King mine, Yavapai County; the Magma mine, Pinal County; and the Morenci mine of the Phelps Dodge Corp., Greenlee County. These five properties, all copper mines except the Iron King and part of the Copper Queen, produced 93 percent of the State total gold, and three of the five properties, owned by the Phelps Dodge Corp., produced 64 percent of Arizona's gold output in 1953. The United Verde mine of the Phelps Dodge Corp., a large producer of copper, gold, and silver since 1881, was shut down permanently in March, 1953, owing to depletion of ore reserves.

The total gold production in Arizona, in terms of recoverable metal, from 1860 through 1953 has been 11,642,084 ounces valued at $294,968,095.

The output of recoverable silver in Arizona in 1953 was 4,351,429 fine ounces valued at $3,938,263, a decrease of 7 percent in quantity and value compared with the 1952 output of 4,701,330 fine ounces valued at $4,254,941. A decline of 679,321 ounces in production of silver from copper-zinc ore and lead-zinc ore in 1953 more than offset an increase of 263,404 ounces from copper ore. In 1953 copper ore yielded 3,164,255 ounces of silver (73 percent of the State total), an increase of 9 percent over 1952, and lead-zinc ore 827,866 ounces (19 percent of the State total), a decrease of 294,608 ounces (26 percent). Copper-zinc ore yielded 73,931 ounces of silver, a decrease of 384,713 ounces; siliceous ores, 214,650 ounces (162,804 ounces in 1952); lead ore, 52,240 ounces (20,083 ounces in 1952); and zinc ore, copper-lead-zinc ore, and copper-lead ore, 8,797 ounces. Old tailings and smelter and mill cleanings supplied 9,671 ounces of silver, and placers 19 ounces. Concentrates smelted yielded 2,898,909 ounces of silver; crude ore, cleanings, and old tailings smelted, 1,452,476 ounces; and ore amalgamated, 25 ounces.

Ninety percent of the State total silver in 1953 came from eight districts--Ajo, Ash Peak, Big Bug, Copper Mountain (Morenci), Harshaw, Mineral Creek (Ray), Pioneer (Superior), and Warren (Bisbee). The output from these districts increased from 3,810,963 ounces in 1952 to 3,900,934 ounces in 1953. The Phelps Dodge Corp., with 10 percent less output than in 1952, continued to be the chief silver producer in Arizona; its four properties (Copper Queen, Morenci, New Cornelia, and United Verde) produced 48 percent of the State silver output in 1953. Other large silver producers were the Magma, Iron King, Ray (Kennecott Coppef Corp.), Flux (American Smelting & Refining Co.), and Ash Peak properties.

The total silver production in Arizona, in terms of recoverable metal, from 1860 through 1953 has been 326,564,159 ounces valued at $247,924,633.

CALIFORNIA

Continuing the downward trend begun in 1948, California mines in 1952, under the pressure of high operating costs and with an unchanged price for the metal, yielded 24 percent less gold than in 1951. Silver, principally produced incidental to other metals reflected the slump in the State base-metal output and fell 4 percent below 1951.

The production of recoverable gold from California lode and placer material in 1952 was 258,176 fine ounces (including a small quantity in "natural gold" sold on the open market) valued at $9,036,160 compared to 339,732 fine ounces valued at $11,890,620 in 1951. In 1952, 141 lode mines produced 115,833 ounces of gold valued at $4,054,155 and 108 placer mines contributed 142,343 ounces valued at $4,982,005. In 1951, 173 lode mines produced 152,108 ounces of gold valued at $5,323,780 and 121 placer mines produced 187,624 ounces valued at $6,566,840.

Of the gold output from lode mines, 96 percent was recovered from gold ore, 2 percent from lead ore, 1 percent from zinc ore, and the remainder from gold-silver ore, copper ore, lead-copper ore, zinc-lead ore, tungsten ore, and tailings and miscellaneous lode material. Metallurgical data show that 61 percent of the lode gold in 1952 was recovered by amalgamation of ore and old tailings, 26 percent by cyanidation of ore and old tailings, 7 percent by smelting of concentrates, and 6 percent by smelting ore, old tailings, flue dust, pyritic ore residue and tungsten ore residue.

Following are 1952 data on placer mining, 1951 figures are given in parentheses: Floating dredges of the bucket line type washed 49,881,800 (68,714,600) cubic yards of gravel and recovered 131,806 (175,870) ounces of gold valued at $4,613,210 ($6,155,450). Dragline dredges--those having a floating washing plant to which gravel is delivered by a dragline excavator--washed 1,447,700 (1,363,000 cubic yards of gravel which yielded 6,655 (6,652) ounces of gold valued at $232,925 ($232,820). Nonfloating washing plants, to which gravel was delivered by mechanical means, and used for straight gold dredging, washed 11,600 (99,900) cubic yards of gravel. Gold recovered at all nonfloating washing plants, including commercial rock plants and tungsten mines (which produced 786 (606) ounces of gold) amounted to 1,462 (2,210) ounces of gold valued at $51,170 ($77,350). Hydraulic mines supplied 409 (440) ounces of gold valued at $14,315 ($15,400) from 53,100 (55,000)cubic yards of gravel washed. Suction dredges accounted for 305 (717) ounces of gold valued at $10,675 ($25,095) from 74,100 (180,500) cubic yards of gravel, and drift mines produced 130 (222) ounces of gold valued at $4,550 (7,770) from 3,700 (2,800) cubic yards of gravel. Small scale, hand operated equipment, was used to produce 1,576 (1,513) ounces of gold valued at $55,160 ($52,955).

Nevada County was the leading producer of gold among the California counties, largely from lode mining. Sacramento County ranked second and Yuba County, third, owing to the productivity of dredges. Sierra County and Kern County followed in order principally from lode gold produced.

The principal gold producers in California in 1952, listed by operators in order of output, were: The Natomas Co., Sacramento County (dredges): Yuba Consolidated Gold Fields Yuba unit, Yuba County (dredges); Idaho Maryland Mines Corp., and Empire Star Mines Co., Ltd., both in Nevada County (gold ore); and the Original Sixteen to One Mine, Inc., Sierra County (gold ore).

Output of silver from California ores, old tailings and miscellaneous lode material and gravels in 1952 was 1,099,658 fine ounces valued at $995,246, compared with 1,145,219 fine ounces valued at $1,036,481 in 1951. Of the lode silver, 57 percent was recovered from zinc-lead ore, 20 percent from lead ore, 13 percent from zinc ore, 5 percent from gold ore, 3 percent from old tailings and miscellaneous lode material, 1 percent from gold-silver ore and 1 percent from silver ore, copper ore and lead-copper ore, together. Nearly 1 percent of the State total silver in 1952 was derived from gravels, worked primarily for gold. Smelting of concentrates yielded 74 percent of the lode silver recovered in California, smelting of ore, old tailings and miscellaneous lode material, 22 percent, cyanidation of ore and old tailings, 3 percent, and amalgamation of ore and old tailings, 1 percent.

The principal silver producers in California in 1952, listed by operators in order of output, were: Anaconda Copper Mining Co., Darwin group, Inyo County (zinc-lead ore and lead ore); Anaconda Copper Mining Co. Shoshone group, Inyo County (lead ore); Coronado Copper & Zinc Co., Shasta County (zinc ore); and New Penn Mines, Inc., successor to Penn Chemical Co., Inc., Calaveras County (zinc ore).

The California gold yield in 1953 decreased 9 percent below the 1952 output as the price of gold was unchanged and mining costs remained at a high level, which limited profitable operation to a relative few properties. Silver, principally a byproduct metal of base-metal ores reflected the decline in base-metal output and decreased 6 percent in quantity and value compared with 1952.

The production of recoverable gold from California lode and placer material in 1953 was 234,591 fine ounces (including a small quantity in "natural gold" sold on the open market) valued at $8,210,685 compared to 258,176 fine valued at $9,036,160 in 1952. In 1953, 150 lode mines produced 111,245 ounces of gold valued at $3,893,575 and 123 placer mines yielded 123,346 ounces of gold valued at $4,317,110. During 1952, 141 lode mines produced 115,833 ounces of gold valued at $4,054,155 and 108 placer mines produced 142,343 ounces of gold valued at $4,982,005.

Of the gold output from lode mines, 98 percent was recovered from gold ore, 1 percent from silver ore, copper ore, copper-zinc ore, lead ore and lead-zinc ore, combined, and 1 percent from old tailings, slag and tungsten ore, combined. Metallurgical data

show that 67 percent of the lode gold in 1953 was recovered by amalgamation of ore and old tailings, 19 percent by cyanidation of ore and old tailings, 13 percent by smelting of concentrates, and 1 percent by smelting ore, old tailings and slag.

Following are 1953 data on placer mining: Floating dredges of the bucket-line type washed 45,528,800 cubic yards of gravel and recovered 119,022 ounces of gold valued at $4,165,770. Dragline dredges--those having a floating washing plant to which gravel is delivered by a dragline excavator--washed 302,600 cubic yards of gravel and produced 935 ounces of gold valued at $32,725. Nonfloating washing plants to which gravel was delivered by mechanical means and used for straight gold dredging, washed 40,800 cubic yards of gravel which yielded 566 ounces of gold valued at $19,810. Gold recovered at all nonfloating washing plants in California, including byproduct gold at commercial rock plants and tungsten mines amounted to 1,143 ounces valued at $40,005. Hydraulic mines produced 469 ounces of gold valued at $16,415 from 216,200 cubic yards of gravel. Suction dredges accounted for 341 ounces of gold valued at $11,935 from 87,700 cubic yards of gravel, and the gold output from drift mines was 165 ounces valued at $5,775 derived from 3,330 cubic yards of gravel. Small scale, hand operated equipment was used to produce 1,271 ounces of gold valued at $44,485 from 76,500 cubic yards of gravel.

Nevada County ranked first among the California gold-producing counties owing largely to lode mining in the Grass Valley-Nevada City district. Sacramento County was second due to the productivity of dredges in the American River district and the yield from dredges in the Yuba River district placed Yuba County in third position. Sierra County and El Dorado County followed in order principally because of lode gold produced in the Alleghany district and the East Belt district, respectively.

The principal gold producers in California in 1953, listed by operators in order of output were: The Natomas Co., Sacramento County (dredges); Yuba Consolidated Gold Fields, Yuba County (dredges); Empire Star Mines, Ltd., Nevada County (gold ore); Idaho Maryland Mines Corp., Nevada County (gold ore); and Original Sixteen to One, Inc., Sierra County (gold ore).

Output of silver from California ores, old tailings and other lode material, and gravels in 1953 was 1,036,372 fine ounces, valued at $937,969, compared with 1,099,658 fine ounces valued at $995,246 in 1952. Of the lode silver, 66 percent was derived from lead-zinc ore, 29 percent from lead ore, 3 percent from gold ore, 1 percent from silver ore, copper ore, copper-zinc ore, and tungsten ore, combined, and 1 percent from old tailings and slag. Less than 1 percent of the total silver produced in the State in 1953 was a byproduct of placer methods carried on principally for gold. Smelting of concentrates contributed 67 percent of the lode silver recovered in California, smelting of ores, old tailings and slag 31 percent, cyanidation of ore and old tailings, 1 percent, and amalgamation of ore and old tailings, 1 percent.

The principal silver producers in California in 1953, listed by operators in order of output, were: Anaconda Copper Mining Co., Inyo County (lead ore and lead-zinc ore); Defense Mine, Inyo County (lead ore); Idaho Maryland Mines Corp., Nevada County (gold ore); Empire Star Mines, Ltd., Nevada County (gold ore); and U. S. Vanadium Co., Inyo County (tungsten ore).

COLORADO

The mine production of gold in Colorado in 1952 was 124,594 fine ounces valued at $4,360,790 compared with 116,503 ounces valued at $4,077,605 in 1951. The Cripple Creek district regained its usual rank as the State's largest gold-producing district, as the new 1,000-ton Carlton custom mill of the Golden Cycle Corporation, which treats the ore, operated a full calendar year for the first time; the output, however, was not as large as could be expected owing to a shortage of underground labor and other continued unfavorable economic conditions for gold mining. The increase in gold output

from the Cripple Creek district more than offset a heavy decrease in Park County caused by the shutdown on January 15 of the South Platte gold dredge at Fairplay. The Cripple Creek, Upper San Miguel, Leadville, and Animas districts together contributed 89 percent of the State total output of gold.

Except in the Cripple Creek district, virtually all the gold-bearing ores of Colorado contain commercial quantities of lead and silver and at many places of zinc and copper also. In recent years the combined value of the zinc, lead, and copper recovered has greatly exceeded that of the gold and silver, which formerly predominated in value. Zinc-lead and complex zinc-lead-copper-gold-silver ores yielded 49 percent of the State total gold in 1952; dry gold and silver ores 47 percent; placer mines 2 percent; and other ores, old slag and clean-up material 2 percent. The leading gold-producing properties, in order of rank, were: Ajax group (Golden Cycle Corp.) at Cripple Creek, Treasury Tunnel-Black Bear group (Idarado) in San Miguel County, Resurrection group at Leadville, Smuggler Union group (Telluride Mines) at Telluride, and Cresson group at Cripple Creek.

Silver production in 1952 totaled 2,813,643 fine ounces valued at $2,546,489--an increase over 1951 of 25,761 ounces valued at $23,315. Districts producing more than 100,000 ounces of silver in 1952 were Upper San Miguel, Red Cliff (Battle Mountain), Leadville, Animas, Grand Island (Caribou), Creede, Rico, and Iron Springs. These eight districts produced 87 percent of the State total output of silver. Zinc, zinc-lead, and complex zinc-lead-copper-gold-silver ores yielded 68 percent of the total silver; dry gold and silver ores 28 percent; and other ores, old slag, old tailings, mill clean-ups, and placer gravel 4 percent. The five leading producers of silver were the Treasury Tunnel-Black Bear (Idarado) group in San Miguel County, Eagle mine at Gilman in Eagle County, Caribou mine at Nederland in Boulder County, Resurrection group at Leadville in Lake County, and the Shenandoah-Dives-Silver Lake group near Silverton in San Juan County.

The Carlton custom mill of the Golden Cycle Corp. at Cripple Creek was the only large mill in Colorado that treated straight gold ore. It employs roasting (in fluosolids reactor) and cyanidation to recover gold from the gold-pyrite flotation concentrate, with cyanidation and carbon precipitation used on the flotation tailings. The bulk of the lead, lead-zinc, and complex gold-silver-copper-lead-zinc ores were concentrated in flotation mills, some of which used jigs in the ball mill-classifier circuit to recover coarse gold for amalgamation. Ore treated by all the mills in 1952 totaled 1,526,106 tons, from which were recovered 66,435 ounces of gold and 17,411 ounces of silver in bullion shipped direct to the mint, and 54,162 ounces of gold and 2,550,667 ounces of silver in concentrates (usually containing their principal value in base metals) shipped to smelters. Ore and clean-up material shipped direct to smelters totaled 22,709 tons yielding, in recovered metals 1,817 ounces of gold, 245,220 ounces of silver, 393,148 pounds of copper, 2,168,225 pounds of lead, and 13,745 pounds of zinc. Placer mines produced 2,180 ounces of gold and 345 ounces of silver.

The total production of recovered gold and silver in Colorado from 1858 through 1952 has been 39,855,129 fine ounces of gold valued at $888,806,479 and 747,984,031 fine ounces of silver valued at $583,460,287.

The mine production of gold in Colorado decreased to 119,218 fine ounces valued at $4,172,630 in 1953 from 124,594 ounces valued at $4,360,790 in 1952. Economic conditions continued to be unfavorable for straight gold or gold-silver mining, as wages and the cost of supplies and equipment have risen greatly since World War II, and there has been no change in the domestic price of gold since 1934 or in silver since 1947.

The Cripple Creek district, producing straight gold ore, contributed 43 percent of the State total gold in 1953. Other formerly important gold-producing districts in Boulder, Clear Creek, Gilpin, La Plata, Park, and Rio Grande Counties remained idle or had only scattered small-scale operations. The Upper San Miguel district in San Miguel County, producing complex ore carrying commercial quantities each of gold, silver, copper, lead, and zinc, supplied 33 percent of the total gold, and the Leadville

district, also producing mostly complex ore, with lead and zinc predominating, contributed 8 percent. The remaining 16 percent came mostly from complex and base-metal ores from Eagle, Ouray, San Juan, and Mineral Counties. The quantities of these ores mined decreased, as the prices of lead and zinc again declined, and the average yearly price of lead was the lowest since 1946 and that of zinc since 1945. Placer gold produced totaled only 1,629 ounces, of which 1,559 ounces was recovered as a byproduct at commerical sand and gravel plants in Adams, Boulder, and Jefferson Counties and the rest came from scattered small placer mines.

The leading gold-producing properties, in order of rank, were: Treasury Tunnel-Black Bear group (Idarado) in San Miguel County, Ajax group (Golden Cycle Corp.) at Cripple Creek, Smuggler Union (Telluride Mines) at Telluride, Cresson mine at Cripple Creek, and Resurrection at Leadville.

Production of silver in 1953 totaled 2,200,317 fine ounces (lowest since 1933) valued at $1,991,398 compared with 2,813,643 ounces valued at $2,546,489 in 1952. The decrease was due to the drop in tonnage of lead and zinc and complex gold-silver-copper-lead-zinc ores mined; these ores and minor quantities of lead-bearing clean-up material yielded 74 percent of the State total silver in 1953. The remaining 26 percent was contained in dry gold and silver ores, except for a small quantity recovered from placer gold.

San Miguel County led in silver production and was followed by Eagle, Lake, Mineral, San Juan, and Dolores Counties, all of which produced more than 100,000 ounces. The leading silver-producing properties were the Treasury Tunnel-Black Bear (Idarado) in San Miguel County, Eagle (Empire Zinc) at Gilman in Eagle County, Resurrection group at Leadville, Emperius at Creede, Smuggler Union (Telluride Mines) at Telluride, and Rico Argentine at Rico. Except for a relatively small quantity contained in gold bullion shipped to the mint, the silver produced in Colorado is marketed along with lead, copper, gold, and zinc as one of the valuable constituents of concentrates or ore sold to smelters.

The bulk of the gold ore produced in 1953 came from mines and dumps in the Cripple Creek district and was treated in the 1,000-ton Carlton flotation-cyanidation mill of the Golden Cycle Corp. Of the other ores treated, comprising chiefly lead-zinc, zinc, and complex gold-silver-copper-lead-zinc ores, 94 percent came from the Battle Mountain (Gilman) and Leadville districts and the San Juan region and was treated in flotation mills. Some of the mills used jigs in the ball mill-classifier circuit to recover coarse gold by amalgamation. Of the total lode-gold produced, 20,632 ounces was recovered by amalgamation and 51,195 ounces by cyanidation, all sold direct to the mint; 42,040 ounces was contained in concentrates (usually carrying their principal value in base metals), and 3,722 ounces in crude ore, both sold to smelters. Lode material treated to recover gold, silver, copper, lead, and zinc totaled 1,204,517 tons, and the total value of the five metals was $22,190,543 in 1953, compared with 1,548,815 tons and $35,920,619 in 1952. Placer gold and silver produced in 1953 was valued at $57,237 and in 1952 at $76,612.

The total production of recovered gold and silver in Colorado from 1858 through 1953 has been 39,974,347 fine ounces of gold valued at $892,979,109 and 750,184,348 fine ounces of silver valued at $585,451,685.

IDAHO

Idaho gold production in 1952 was 32,997 fine ounces, valued at $1,154,895. This output was smaller than for any year since 1945 and represented a 27 percent decline from the 1951 total. Gold and gold-silver ores yielded 73 percent of the gold produced in 1952; placer operations supplied 13 percent; zinc-lead ore, 7 percent; and silver, copper, and lead ores, most of the remainder.

The decrease in gold production in 1952 was due chiefly to the suspension of operations from June through December by the Bradley Mining Co. at its Yellow Pine anti-

mony-gold mine, Stibnite, Valley County, Despite the shutdown, attributed to low antimony prices, the operation was the largest producer of gold in the State in 1952. Other leading producers were Talache Mines, Inc. from the Boise-Rochester Group, Middle Boise district, Elmore County, and Duvall Co. from the Virginia Group, Blackpine district, Cassia County. Warren Dredging Co., working the Yankee Fork placer, Custer County, and the Tyee Mining Co. and Clearwater Dredging Co., both operating in the Elk City district, Idaho County, were the largest producers of placer gold.

The total production of gold in Idaho, in terms of recoverable metal, from 1863 through 1952 has been 8,209,727 fine ounces valued at $190,129,848.

Idaho's output of silver in 1952 was 14,923,165 fine ounces with a value of $13,506,218. This was 170,142 fine ounces greater than the 1951 production. Idaho maintained its position as the largest silver producing State - a rank held since 1933. Shoshone County mines, Coeur d'Alene region, produced 92 percent of the State's silver output in 1952.

About 67 percent of silver produced came from silver ore and most of the rest from zinc-lead ore. A small amount of silver (1,587 fine ounces) was recovered by placer operations.

The five largest producers, all located in the Coeur d'Alene mining region, produced 73 percent of the State's silver in 1952. The mines were, in order of output, Sunshine mine and Polaris mine, both operated by the Sunshine Mining Co., the Bunker Hill mine of Bunker Hill and Sullivan Mining and Concentrating Co.; the Silver Summit mine, Polaris Mining Co.; and St. Germaine, worked by Sunshine Mining Co.

The total production of silver in Idaho, in terms of recoverable metal, from 1863 through 1952 has been 598,100,530 fine ounces valued at $429,277,072.

Idaho's gold production in 1953 was 17,630 fine ounces, valued at $617,050. Recovery of the metal decreased sharply for the third consecutive year, and the annual yield fell below 20,000 ounces for the first time since 1945. The decline of 47 percent compared to 1952 can be attributed largely to the closing in mid-1952 of the Yellow Pine antimony-gold mine at Stibnite, Valley County, the largest single producer of gold in the State during recent years. Listed in order of magnitude, the principal producing firms in 1953, each exceeding 1,000 fine ounces in output, were: Duval Co., Cassia County (Virgnia group of lode claims); Clearwater Dredging Co., Idaho County (bucket-line dredge); Talache Mines, Inc., Elmore County (Boise-Rochester lode mine); and Tyee Mining Co., Idaho County (dragline dredge). On October 15, a further curtailment in gold production in Idaho occurred when Talache Mines, Inc. placed the Boise-Rochester operation on a standby basis. In December, a group of former employees leased the mine and began operating the mine on a limited scale.

Lode mines continued as the principal source of gold, supplying 67 percent of the State total. Of the gold produced from lode mines, 65 percent was recovered from gold ore, 17 percent from lead-zinc ore, and most of the remainder from silver and copper ores. In contrast to the decrease in the quantity of gold from lode mines, production from placers advanced 36 percent. This increase was due in part to the output of the Clearwater Dredging Co., which late in 1952 began operating a bucket-line dredge on the Crooked River near Elk City.

The total production of gold in Idaho, in terms of recoverable metal, from 1863 through 1953, has been 8,217,357 fine ounces valued at $190,746,898.

The output of silver in Idaho in 1953 totaled 14,639,740 fine ounces with a value of $13,249,704. This represented a decrease of 2 percent compared to 1952. The State maintained first position nationally in the production of silver. Shoshone County contributed 93 percent of Idaho's output.

The Sunshine Mining Co. mined 12 percent more silver ore from the Sunshine mine and adjoining areas operated for affiliated firms under a profit-sharing agreement, but the grade of ore was lower than in 1952, causing a slight reduction in the quantity of silver recovered. About 60 percent of the silver produced in the State was supplied by the Sunshine Mining Co. and the Polaris Mining Co., which operated the Silver Summit property. The Bunker Hill lead-zinc mine of Bunker Hill & Sullivan Mining & Concen-

trating Co. also was an important source of silver. Of the State total, slightly more than 60 percent was recovered from silver ore, 31 percent from lead-zinc ore, and most of the remainder from lead ore.

Total production of silver in Idaho, in terms of recoverable metal, from 1863 through 1953 has been 612,740,270 fine ounces valued at $442,526,776.

MISSOURI

Production of silver in Missouri is dependent upon the refining of base bullion obtained from the smelting of southeast Missouri lead and lead-copper ores. No value is given for silver in the sale of lead concentrates as the amount of contained silver is so small (approximately one or two ounces per ton of concentrate) and not all the base bullion is desilverized.

There were 517,432 fine ounces of silver recovered from the refining of southeast Missouri pig lead (base bullion) which was valued at $468,302. This recovery was nearly three times the 184,425 fine ounces recovered in 1951 having a value of $166,913. The St. Joseph Lead Company, the largest lead producer in the United States for the 45th consecutive year, was the largest silver producer in Missouri in 1952. Silver was likewise recovered from lead-copper ores of this region.

Recovery of silver in Missouri amounted to 359,781 fine ounces in 1953, a decrease of 30 percent from the 517,432 fine ounces recovered in 1952. In the refining of lead bullion and smelter residue derived from southeastern Missouri concentrates, 356,326 fine ounces of silver were recovered while 3,455 fine ounces were recovered from Missouri lead-copper concentrates.

There is no record of any gold recovery from Missouri from 1907 to date.

MONTANA

Gold production from Montana mines in 1952 amounted to 24,161 fine ounces with a value of $845,635. The output was 21 percent less than in 1951 and was the lowest recorded in the State's mining history. Recovery of gold has declined continuously since 1947. The peak gold production year in the twentieth century was 1940, when the output for the State reached 272,602 fine ounces. Only 78 fine ounces was recovered from placer mines in 1952. Most of the gold from lode mines came from zinc-lead and copper ores; gold and gold-silver ores supplied only 27 percent of the total gold production.

Leading gold producers, supplying 83 percent of the State total, were the Butte Hill operations of Anaconda Copper Mining Co.; the Estelle mines of the McLaren Gold Mines Co., New World district, Park County; and the Marget Ann mine of Mitchell Mining Co., Summit Valley district, Silver Bow County.

The total production of gold in Montana, in terms of recoverable metal, from 1862 through 1952 was 17,374,487 fine ounces valued at $392,560,257.

The output of silver in 1952 totaled 6,138,185 fine ounces, valued at $5,555,367, a decrease of four percent compared to 1951 production. Almost all of the silver was recovered as a byproduct from base metal ores; 66 percent came from zinc-lead and 25 percent from copper ore. Decreased production of zinc-lead ore from the Butte Hill mines of Anaconda Copper Mining Co. lead to the drop in silver production in the State in 1952. Butte mines and dumps yielded 88 percent of the State's total silver. Most of the remainder came from the following properties, listed in order of output: Marget Ann, Mitchell Mining Co., Silver Bow County; Scratch Awl, Countact Mining Co., Granite County; Algonquin, Trout Mining Division of American Machine and Metals, Inc., Granite County; Alta, Lahey Leasing Co., Jefferson County; Mike Horse, American Smelting and Refining Co., Lewis and Clark County; True Fissure, Taylor-Knapp Co., Granite County; Elkhorn Queen, New Elkhorn Queen Mining Co., Jefferson County; and Cornucopia, Henry A. Shute, Madison County.

The total production of silver in Montana, in terms of recoverable metal, from 1862 through 1952 has been 787,856,454 fine ounces valued at $582,107,188.

The mine output of gold in Montana in 1953 comprised 24,768 fine ounces valued at $866,880. Production increased by 3 percent, reversing a series of annual declines which began in 1948. The advance reflected a gain in output from placer mines, which produced 1,223 fine ounces in 1953 compared to only 78 fine ounces in 1952. The output of lode mines, which contributed 95 percent of the State total, declined by 2 percent.

The Anaconda Copper Mining Co. recovered byproduct gold from copper and lead-zinc ores mined at Butte and continued as the principal producer of gold in the State, followed by the Mitchell Mining Co. operation at the Marget Ann gold-silver property near Butte. The leading placer operation was located on Josephine Creek in the Nine Mile mining district of Missoula County.

Of the gold produced from lode mines, 89 percent was derived from base metal ores and 11 percent from gold and silver ores.

The total production of gold in Montana, in terms of recoverable metal, from 1862 through 1953, has been 17,399,255 fine ounces valued at $393,427,137.

Mine production of silver in Montana in 1953 was 6,689,556 fine ounces having a value of $6,054,386. The output increased 9 percent in quantity and value over the 1952 yield, due principally to increased output of silver recovered from copper ore mined at the Butte Hill properties of the Anaconda Copper Mining Co. The Anaconda firm supplied from its Butte copper and lead-zinc mines more than 90 percent of the silver produced in Montana during 1953.

Lead-zinc ores yielded 67 percent of the State's silver in 1953, copper ores supplied 31 percent, and gold and silver ores accounted for most of the remainder.

The total production of silver in Montana, in terms of recoverable metal, from 1862 to 1953 has been 794,546,010 fine ounces valued at $588,161,574.

NEVADA

With Nevada lode gold mines still largely quiescent in 1952, the State gold yield continued to fall, decreasing 3 percent below 1951. Silver output closely related to the State lead and zinc production, which declined in 1952, dropped 4 percent below 1951 and established a new low for the metal in Nevada for the past 53 years.

Gold recovered from Nevada lode materials and gravels in 1952 was 117,203 fine ounces valued at $4,102,105, compared with 121,036 fine ounces valued at $4,236,260 in 1951. The yield of silver in 1952 was 941,195 fine ounces valued at $851,829, compared with 981,669 fine ounces valued at $888,460 in 1951.

The leading Nevada gold mines in 1952, listed by operating company and in order of output were: Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); the Natomas Co., Lander County (dredging); London Extension Mining Co., Lander County (gold ore); Consolidated Coppermines Corp., White Pine County (copper ore); Round Mountain Gold Dredging Co., Nye County (placer).

Sources of the gold recovered follow: Copper ore, 51 percent; placer gravel, 28 percent; gold ore, 16 percent; zinc-lead ore, 3 percent and all other lode material, 2 percent. Metallurgical data show that nearly 75 percent of the lode gold was recovered by smelting concentrates, 22 percent by cyaniding ore and old tailings, 3 percent by direct smelting of ore, old tailings and slag. Less than 1 percent of the total gold was recovered by amalgamating ore and old tailings.

Nevada silver was recovered from the following sources in 1952: Zinc-lead ore, 55 percent; copper ore, 18 percent; lead ore, 16 percent; silver ore, 6 percent; zinc ore, 2 percent; zinc-lead-copper ore, 1 percent; placer gravels, 1 percent; and gold ore, gold-silver ore, lead-copper ore, zinc-copper ore, and old tailings and slag, together, 1 percent. Of the total lode material treated, smelting of concentrates yielded 84 percent of the silver produced in Nevada in 1952: nearly 16 percent came from the direct smelting of ore, old tailings and slag and less than 1 percent was recovered by cyaniding ore and old tailings and amalgamating ore and old tailings.

The principal silver mines in Nevada in 1952, listed by operating company, in order of output were: Combined Metals Reduction Co., Lincoln County (zinc-lead ore); Copper

Canyon Mining Co., Lander County (zinc-lead ore); Kennecott Copper Corp., (Nevada Mines Division), White Pine County (copper ore); Mohawk Mine and Mill, Esmeralda County (silver ore); and the New World Exploration and Development Co., Elko County (lead and zinc ores).

Both precious-metal lode mining and placer mining continued to wane in Nevada during 1953 and gold output fell 13 percent below the 1952 yield. Silver production followed the downward trend which began in 1950 and decreased 26 percent compared to 1952, reaching the lowest output recorded in Nevada during the period 1880 to 1953.

The production of gold from Nevada lode materials and gravels in 1953 was 101,799 fine ounces, valued at $3,562,965, compared to 117,203 fine ounces valued at $4,102,105 in 1952. Silver output in 1953 was 697,086 fine ounces valued at $630,898, compared to 941,195 fine ounces, valued at $851,829 in 1952.

Gold was recovered from the following sources: Copper ore, 60 percent; gold ore, 20 percent; placer gravel, 16 percent; lead-zinc ore, 2 percent; manganese ore, 1 percent; and gold-silver ore, silver ore, copper-lead-zinc ore, lead ore and miscellaneous lode material, combined, 1 percent. Metallurgical data show that 73 percent of the lode gold was recovered by smelting concentrates; 22 percent by cyaniding ore and old tailings; 4 percent by direct smelting of ore, old tailings and miscellaneous lode material; and 1 percent by amalgamating ore and old tailings.

The leading Nevada gold mines in 1953, listed by operating company and in order of output were: Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); Consolidated Coppermines Corp., White Pine County (copper ore); London Extension Mining Co., Lander County (gold ore); and the Natomas Co., Lander County (dredging).

Nevada silver was recovered from the following sources in 1953: Lead-zinc ore, 35 percent; copper ore, 27 percent; manganese ore, 13 percent; lead ore, 9 percent; copper-lead-zinc ore, 5 percent; old tailings, slag and residue, nearly 5 percent; silver ore, 4 percent; gold ore, 1 percent; gold-silver ore, 1 percent; and placer gravel, a fraction of 1 percent. The smelting of concentrates yielded nearly 73 percent of the lode silver produced in Nevada in 1953; 27 percent came from the direct smelting of ores and other lode materials; and a fraction of 1 percent was contributed by amalgamation of ore and tailings and cyanidation of ore and tailings, combined.

The principal silver mines in Nevada in 1953, listed by operating company in order of output were: Combined Metals Reduction Co., Lincoln County (zinc-lead ore and manganese ore); Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); Consolidated Coppermines Corp., White Pine County (copper ore); and Bristol Silver Mines Co., Lincoln County (copper-lead-zinc ore and manganese ore).

NEW MEXICO

In 1952, as in other years since World War II, there was little activity in straight gold and silver mining in New Mexico, owing mainly to the high cost of labor and materials compared with the fixed price of gold. The quantity of straight gold and silver ores mined (804 tons) was the least recorded since tabulation of individual mine production was begun in 1904. The output of gold in 1952 was 2,949 fine ounces valued at $103,215, the lowest in quantity recorded during the 84 years (1869-1952) for which figures are available. Production in 1951 was 3,959 ounces valued at $138,565. The output of silver in 1952 was 479,318 fine ounces valued at $433,807 compared with 443,267 ounces valued at $401,179 in 1951. Base-metal ores and old tailings, chiefly copper, zinc, and zinc-lead ores, yielded 95 percent of the total gold and more than 99 percent of the silver in 1952.

The decrease in gold production in 1952 from 1951 was due largely to a decline in the quantity of gold recovered from copper ore and the drop from 3,243 to 804 tons in the quantity of gold and silver ores mined. None of the individual mines was a large producer of gold. Mines producing chiefly copper and zinc in the Central district of

Grant County and copper in the Lordsburg district of Hidalgo County contributed 73 percent of the State total gold in 1952. Only 2 ounces of gold were recovered from placer mines and 136 ounces from lode mines worked for gold and silver. Most of the gold ore came from the Hillsboro district in Sierra County.

The increase in silver output in 1952 resulted from the mining of larger tonnages of base-metal ores that yielded silver as a byproduct. Zinc and zinc-lead ores, mostly from the Central district, yielded 80 percent of the total silver; copper ore, largely from the Lordsburg and Central districts, 16 percent; and other ores, old tailings, and mill clean-ups from various districts 4 percent. The leading producers of silver were the Ground Hog and Bayard zinc-lead mines in Grant County, the Lynchburg zinc-lead mine in Socorro County, and the Bonney-Miser's Chest and Atwood copper mines in Hidalgo County.

The total production of gold and silver in New Mexico, in terms of recovered metals, from 1848 through 1952 has been 2,202,966 fine ounces of gold valued at $50,438,003, and 70,450,259 fine ounces of silver valued at $55,384,761.

The New Mexico mine output of gold, which in 1952 had fallen to the lowest level in 84 years, decreased further in 1953. Gold recovered, mostly a by-product from base-metal ores, totaled 2,614 fine ounces valued at $91,490 compared with 2,949 ounces valued at $103,215 in 1952. Small tonnages of gold or gold-silver ore were shipped from mines and prospects in the Cooney district near Mogollon, Catron County, and the Hillsboro and Tierra Blanca districts, Sierra County. Some gold was recovered in the Hillsboro district from gold ore mined in previous years and treated in 1953, and in the Nogal district, Lincoln County, from gold ore treated for testing. Gold and silver ores yielded 319 ounces of gold in 1953; copper ore 1,593 ounces; lead and zinc ores and mill clean-ups 697 ounces, and placer mines 5 ounces. None of the individual mines produced as much as 1,000 ounces of gold.

Silver production decreased to 205,309 fine ounces valued at $185,815 in 1953 from 479,318 ounces valued at $433,807 in 1952. The decrease was due to the heavy decline in tonnage of zinc and zinc-lead ores mined; these ores yielded 80 percent of the State total silver in 1952 and only 44 percent in 1953. A further decline in the price of zinc led to the closing of all the mines producing zinc and zinc-lead ores by October 1. Copper ore yielded 52 percent of the total silver in 1953 and only 16 percent in 1952. Dry gold and silver ores, lead ore, and mill cleanups yielded 4 percent of the silver in 1953. The leading producers of silver were the Banner Mining Co. Miser's Chest copper mine in the Lordsburg district, the Bayard (United States Smelting, Refining & Mining Co.) zinc-lead group in the Central district, and the Atwood copper mine in the Lordsburg district.

The total production of gold and silver in New Mexico, in terms of recovered metals, from 1848 through 1953 has been 2,205,580 fine ounces of gold valued at $50,529,493 and 70,655,568 fine ounces of silver valued at $55,570,576.

OREGON

Oregon's mines in 1952 yielded 5,509 fine ounces of gold valued at $192,815. This output was smaller than in any year since the close of World War II. Mine production of gold was 31 percent less than in 1951 and 71 percent less than in 1947, the peak year in the postwar period. The decline of gold production in the State in 1952 was due in large part to the suspension of dredging operations in the Granite district, Grant County, by Porter and Co. late in 1951.

About 83 percent of Oregon's 1952 gold output was recovered by the Powder River Dredging Co., which operated its electrically-powered bucket dredge throughout the year near Sumpter, Baker County. Two lode mines, the Buffalo mine of Boaz Mining Co., near Granite in Grant County, and the Champion mine, opeated by Harold E. L. Barton, in the Bohemia district, Lane County, accounted for nine percent of the State's gold production. The balance came from 11 lode and 24 placer mines, most of which

were worked for short periods in the course of prospecting and development work by individuals.

Total production of gold in Oregon, in terms of recoverable metal, from 1852 through 1952 has been 5,748,264 fine ounces valued at $129,152,283.

Silver output in 1952 totaled 4,037 fine ounces valued at $3,654. Production was 35 percent less than in 1951. Of the silver produced in 1952, 64 percent came from the Buffalo mine; 26 percent from Powder River Dredging Co. placer operations; 9 percent from the Champion mine, and 1 percent from small lode and placer mines.

The total production of silver in Oregon, in terms of recoverable metal, from 1852 through 1952 has been 5,298,375 fine ounces valued at $4,861,232.

Oregon's gold production in 1953 totaled 8,488 fine ounces valued at $297,080, an increase of 54 percent compared to 1952 when the annual yield dropped to an all-time low except for the years during World War II. The gain in production in 1953 was credited principally to an advance by the Powder River Dredging Co., the major gold producer in Oregon, which operated a Yuba-type bucket-line dredge on the Powder River near the town of Sumpter, Baker County, supplying 82 percent of the gold recovered in the State during the year. Although the amount of gravel processed by the dredge declined considerably, the average value of the material in gold and silver increased from 6 cents per cubic yard in 1952 to 11 cents in 1953. Production of gold from the Buffalo lode mine, operated in Grant County by James P. Jackson, lessee, also increased compared to 1952. A total of 21 placer and 8 lode mines producing gold were reported active in Oregon, but the Powder River dredging operation and the Buffalo mine were the only substantial sources of metal. The placers supplied 86 percent of the production.

Total production of gold in Oregon, in terms of recoverable metal, from 1852 through 1953 has been 5,774,350 fine ounces valued at $130,065,291.

Silver output in 1953 was 12,259 fine ounces, valued at $11,095, more than three times the quantity produced in 1952. Increased production from the Buffalo mine, the principal producer of silver, accounted for the increase. The Powder River Dredging Co. also recovered a substantial quantity of silver.

From 1852 through 1953, the total production of silver in Oregon, in terms of recoverable metal, has been 5,317,561 fine ounces valued at $4,877,924.

SOUTH DAKOTA

South Dakota lode mines produced 482,534 fine ounces of gold and 132,102 fine ounces of silver in 1952. Output in 1951 was 458,101 fine ounces of gold and 139,590 fine ounces of silver. In 1952, production was valued at $16,888,690 for gold and $119,559 for silver. For several years the value of newly mined domestic gold and silver has been calculated respectively at $35.00 and $0.9050505+ per fine ounce.

In 1952, production of gold and/or silver was reported from 6 lode mines. In 1951, production was from 5 lode mines and 3 small placer mines. However, for a number of years the Homestake Mining Co. and the Bald Mountain Mining Co. have been the State's important producers.

November 5, 1952 marked the 75th year of operation by the Homestake Mining Co. as a corporation. According to the company annual report at the end of 1952, around 81 million tons of ore had been mined, including 6 million from adjacent properties prior to their consolidation with the company. The company's records from 1878 through 1952 show a total production of 20,651,806 ounces of gold and 4,990,000 ounces of silver. Construction and remodeling of the new crushing plant at the Yates shaft were completed during 1951. The new crushing plants, with changes in the grinding section of the South Mill, will allow the company to discontinue use of stamps. Sixty stamps have already been taken out of the circuit. No labor difficulties were experienced during the year. Light jackhammers and carbide bits are now used exclusively in the mine. The Bald Mountain Mining Co. operated its Portland, Dakota and Clinton group of mines (classed as one mine) and 370 ton all-sliming cyanide mill continuously during the year.

Production of gold and silver in South Dakota during 1953 increased 11 and 5 percent respectively over the previous year, totaling 534,987 fine ounces of gold and 138,642 fine ounces of silver. Output in 1952 was 482,534 fine ounces of gold and 132,102 fine ounces of silver.

The value of these metals produced in 1953 was $18,724,545 for gold and $125,478 for silver. These figures compare with $16,888,690 for gold and $119,559 for silver in 1952. Gold and silver were valued at $35 and $0.9050505, respectively for both 1952 and 1953.

In 1953 three companies operated four underground mines, accounting for all of the production of gold and silver in the State. No production of gold or silver has been reported from placer operations since 1951. The Homestake Mining Company was the State's largest producer. During the year this company started deepening of the Yates & Ross shafts and preparations were being made for sinking a new interior shaft below the 5,000 foot level which level at present is the deepest in the mine. The company reports that at least an additional two years' work will be required on this major lower level project before significant additions to the reserves can be expected. The company completed installation of its three new grinding units which resulted in the final elimination of all stamps. In the mine, change-over to light drills was completed and replacement of high-pressure air haulage for electric haulage was started. Operations were continuous throughout the year. The Bald Mountain Mining Company, the State's other large producer, operated its Portland, Dakota and Clinton group of mines (classed as one mine) and 370-ton all-sliming cyanide mill continuously during the year. The labor supply was reported to be adequate by both of the above companies. The third producer was the American Mining & Smelting Company which reported several small shipments of gold-silver-lead ore from the Spokane mine and the Silver Queen mine.

TEXAS

Gold production in Texas in 1952 amounted to 39 fine ounces, valued at $1,365 while in 1951, 32 fine ounces were produced having a value of $1,103.

There were 4,672 fine ounces of silver reported from Texas in 1952, valued at $4,228, compared to 1,381 fine ounces valued at $1,250 in 1951. It is probable that some of this silver was recovered from ores produced in 1951 as most of the base metal mining from which the silver was recovered had been abandoned about August due to low metal prices. The gold and silver were recovered principally from lead-silver and lead-copper ores produced in the southwest part of the State.

No gold or silver was reported from Texas in 1953 as all base mining was suspended for the entire year because of low metal prices.

UTAH

The mine production of gold in Utah in 1952 was 435,507 fine ounces (all from lode mines) valued at $15,242,745. The output was 3,291 ounces (nearly 1 percent) greater than the 1951 output of 432,216 ounces valued at $15,127,560. The output in 1952 was 22 percent above the annual average of the 10-year period (1942-51), and the State ranked second in gold output (exceeded only by South Dakota). Most of the gold produced in Utah is a byproduct of copper ore, and in 1952 this class of ore yielded 403,279 ounces of gold--11,879 ounces (3 percent) greater than in 1951. Zinc-lead ore supplied 27,763 ounces of the State's gold in 1952, a decrease of 5,726 ounces (17 percent) from 1951; siliceous ores, 3,165 ounces (4,886 ounces in 1951); lead ore and lead-copper ore, 742 ounces (984 ounces in 1951); and old tailings and smelter cleanings, 558 ounces (1,457 ounces in 1951). Nearly all of the gold recovered from copper ore came from the West Mountain (Bingham) district and 94 percent of the gold recovered from zinc-lead ore came from the Park City region and West Mountain (Bingham) district.

Of the total gold in 1952, 93 percent came from copper ore, 6 from zinc-lead ore, and most of the remainder from silver ore, gold-silver ore, and lead ore. The West

Mountain (Bingham) district supplied 417,607 ounces (96 percent) of the total gold, the Park City region 13,827 ounces (3 percent), and the Tintic district 2,942 ounces (nearly 1 percent). Output of gold in the West Mountain (Bingham) district increased 10,411 ounces (more than 2 percent) over 1951, but in the Park City region it declined 4,649 ounces (25 percent), and in the Tintic district 2,040 ounces (41 percent). Concentrates smelted yielded 430,792 ounces of the total gold, crude ore smelted 4,161 ounces, and old tailings and smelter cleanings smelted 554 ounces.

The leading gold producers in Utah in 1952--each with an output of more than 1,000 ounces of recoverable metal--were as follows: Utah Copper mine and United States & Lark group in the West Mountain (Bingham) district; the property of the New Park Mining Co. in the Park City region; Chief Consolidated No. 1 mine in the Tintic district; and Park Utah Consolidated property in the Park City region. These five properties furnished 99 percent of the State gold.

The total production of gold in Utah, in terms of recoverable metal, from 1864 through 1952, has been 13,072,394 ounces valued at $357,758,830.

The mine output of silver in Utah in 1952 was 7,194,109 fine ounces valued at $6,511,032--a decrease of more than 1 percent in quantity and value from 7,310,665 ounces valued at $6,616,521 in 1951. A substantial decrease in output of silver from lead ore and siliceous ores and old tailings in 1952 more than offset the increase in output from copper ore and zinc-lead ore. Although Utah's silver output in 1952 was 4 percent below the yearly average of the 10-year period (1942-51), the State continued to rank second in silver output (exceeded only by Idaho). In 1952 the West Mountain (Bingham) district supplied 5,338,291 ounces (74 percent) of the total silver, the Park City region 861,563 ounces (12 percent), and the Tintic district 666,345 ounces (9 percent). Output of silver in the West Mountain (Bingham) district increased 415,042 ounces (8 percent) over 1951, but in the Park City region it declined 269,797 ounces (24 percent), and in the Tintic district 278,473 ounces (29 percent).

Copper ore supplied 3,284,470 ounces (nearly 46 percent) of the State's total silver--103,201 ounces (3 percent) more than in 1951--and zinc-lead ore 3,197,137 ounces (44 percent)--96,628 ounces (3 percent) more than in 1951. Siliceous gold and silver ores yielded 551,483 ounces of silver (573,917 ounces in 1951); lead ore, 72,178 ounces (233,428 ounces in 1951); and zinc ore and lead-copper ore, 496 ounces (523 ounces in 1951). Old tailings and smelter cleanings supplied 88,345 ounces of silver (221,019 ounces in 1951). Nearly 100 percent of the silver recovered from copper ore came from the West Mountain (Bingham) district and 91 percent of the silver recovered from zinc-lead ore came from the Park City region, Tintic district, and West Mountain (Bingham) district. Concentrates smelted yielded 6,474,234 ounces of the total silver, crude ore smelted 632,347 ounces, and old tailings and smelter cleanings smelted 87,528 ounces.

Utah properties that produced more than 175,000 ounces of recoverable silver each in 1952 were as follows: Utah Copper mine, United States & Lark group, Chief Consolidated No. 1 mine, and the Butterfield, New Park, Ontario, Park Utah Consolidated, and Calumet properties. These eight producers contributed 93 percent of the State silver.

The total production of silver in Utah, in terms of recoverable metal, from 1864 through 1952, has been 763,311,342 ounces valued at $564,033,233.

The mine production of gold in Utah in 1953 was 483,430 fine ounces valued at $16,920,050. The production was 47,923 ounces (11 percent) greater than the 1952 output of 435,507 ounces valued at $15,242,745. The production in 1953 was the greatest for any year in the State's history and 33 percent above the annual average of the 10-year period (1943-52); the State continued to rank second in gold output (exceeded only by South Dakota). Of the total gold produced in Utah in 1953, 91 percent was a byproduct of copper ore; this class of ore yielded 441,623 ounces of gold in 1953--38,344 ounces (9.51 percent) more than in 1952. Lead-zinc ore supplied 36,008 ounces (7 percent) of the State's gold in 1953, an increase of 8,245 ounces (30 percent) over 1952; siliceous

ores, 4,212 ounces (3,165 ounces in 1952); lead ore and copper-lead ore, 252 ounces (742 ounces in 1952); old tailings, slag, and smelter cleanings, 1,326 ounces (558 ounces in 1952); and placers 9 ounces (0 in 1952). All, except 24 ounces, of the gold recovered from copper ore came from the West Mountain (Bingham) district, and 95 percent of the gold recovered from lead-zinc ore came from the Park City region and West Mountain (Bingham) district.

The West Mountain (Bingham) district supplied 450,882 ounces (93 percent) of the total gold, an increase of 8 percent over 1952; the Park City region 27,919 ounces (6 percent), approximately double that in 1952; and the Tintic district 3,264 ounces (about 1 percent), an 11-percent gain over 1952. Concentrates smelted yielded 477,603 ounces of the total gold, crude ore smelted 4,233 ounces, and old tailings, slag, and smelter cleanings smelted 1,585 ounces.

The leading gold producers in Utah in 1953--each with an output of more than 1,000 ounces of recoverable metal--were as follows: Utah Copper mine (Kennecott Copper Corp.) in the West Mountain (Bingham) district; the property of the New Park Mining Co. in the Park City region; the United States & Lark group in the West Mountain (Bingham) district; Chief Consolidated No. 1 mine in the Tintic district; and the West Calumet mine in the Rush Valley district. These five properties furnished 99 percent of the State gold.

The total production of gold in Utah, in terms of recoverable metal, from 1864 through 1953, has been 13,555,824 ounces valued at $374,678,880.

The mine production of silver in Utah in 1953 was 6,725,807 fine ounces valued at $6,087,195--a decrease of 6.51 percent in quantity and value from 7,194,109 ounces valued at $6,511,032 in 1952. A decrease of 709,807 ounces in production of silver from lead-zinc ore in 1953 more than offset the increase of 275,940 ounces from copper ore and siliceous ores and old tailings. Although Utah's silver output in 1953 was 6 percent below the yearly average of the 10-year period (1943-52), the State continued to rank second in silver output (exceeded only by Idaho). In 1953 the West Mountain (Bingham) district supplied 5,027,419 ounces (75 percent) of the total silver, a decrease of 6 percent from 1952; the Park City region 802,036 ounces (12 percent), a decrease of 7 percent; and the Tintic district 580,209 ounces (9 percent), a decrease of 13 percent.

Copper ore supplied 3,412,050 ounces (51 percent) of the State's total silver--127,580 ounces (4 percent) more than in 1952--and lead-zinc ore 2,487,330 ounces (37 percent)--709,807 ounces (22 percent) less than in 1952. Siliceous gold and silver ores yielded 586,628 ounces of silver (551,483 ounces in 1952); and lead ore, 39,344 ounces (72,178 ounces in 1952). Old tailings, slag, and smelter cleanings supplied 200,454 ounces of silver (88,345 ounces in 1952). Virtually all of the silver recovered from copper ore came from the West Mountain (Bingham) district and 97 percent of the silver recovered from lead-zinc ore came from the Park City region, Rush Valley district, Tintic district, and West Mountain (Bingham) district. Concentrates smelted yielded 5,896,071 ounces of the total silver, crude ore smelted 629,281 ounces, old tailings, slag, and smelter cleanings smelted 200,454 ounces, and placers 1 ounce.

Utah properties that produced more than 150,000 ounces of recoverable silver each in 1953 were as follows: Utah Copper mine, United States & Lark group, Chief Consolidated No. 1 mine, and the New Park, Ontario waste dump, Calumet, and Butterfield properties. These seven producers contributed 94 percent of the State silver.

The total production of silver in Utah, in terms of recoverable metal, from 1864 through 1953, has been 770,037,149 ounces valued at $570,120,428.

WASHINGTON

Gold produced from Washington mines in 1952 totaled 54,776 fine ounces valued at $1,917,160. Output of the metal decreased 19 percent compared with 1951. The 1952 figure was the smallest yearly total since 1947.

Almost 99 percent of the gold recovered came from Chelan and Ferry County mines, in north-central Washington. The largest producers were, in order of their output, Knob Hill mines, Knob Hill Mines, Inc., Republic district, Ferry County; Holden mine of Howe Sound Co., Chelan Lake district, Chelan County; and Gold King mine, Lovitt Mining Co., Wenatchee River district, Chelan County. About 65 percent of the State's gold was recovered from gold ore and most of the remainder from zinc-copper ore. Only three ounces of gold was recovered by placer mining.

Total production of gold in Washington in terms of recoverable metal, from 1860 through 1952, has been 2,570,002 fine ounces valued at $68,705,393.

The mine output of silver amounted to 315,645 fine ounces with a value of $285,674, a decrease of 6 percent in quantity from the 334,948 fine ounces produced in 1951. About 77 percent of the silver came from Chelan and Ferry Counties and 22 percent from Pend Oreille and Stevens Counties, in the northeastern corner of the State. The Knob Hill mine was the largest producer, followed by the Holden mine; the Bonanza mine of Anaconda Copper Mining Co., Bossburg district, Stevens County; the Pend Oreille mine of Pend Oreille Mines and Metals Co., Metaline district, Pend Oreille County; and the Gold King mine.

About 52 percent of Washington's silver output was obtained from gold ore, 26 percent from zinc-copper ore, and 14 percent from zinc-lead ore; smaller amounts of silver were obtained from lead ore and old lead tailings, zinc ore, copper ore, and silver ore.

The total production of silver in Washington, in terms of recoverable metal, from 1860 through 1952, has been 14,871,542 fine ounces valued at $10,957,311.

In 1953, Washington's mines yielded 62,560 ounces of gold valued at $2,189,600. Production increased 8 percent compared to 1952, due to substantial gains in output of gold ore from the Knob Hill mine, Knob Hill Mines, Inc., Ferry County, and the Gold King mine of Lovitt Mining Co., Chelan County, which more than offset a decrease in production from the Holden mine. The latter property, operated in Chelan County by Howe Sound Co., supplied copper-zinc ore with gold an important byproduct. The three mines contributed 98 percent of the State's gold production. The principal source of the remaining 2 percent was copper-zinc ore from the Alder group, Okanogan County. Gold was contained also in lead-zinc ores mined in Pend Oreille and Stevens Counties. Gold ore supplied nearly 74 percent of the State total and base metal ore accounted for 26 percent. A small quantity of the metal was recovered from placer properties.

The total production of gold in Washington, in terms of recoverable metal, from 1860 through 1953, has been 2,632,562 fine ounces valued at $70,894,993.

Mine output of silver in 1953 totaled 321,202 fine ounces with a value of $290,704, an increase of 2 percent in quantity and value compared to 1952. As in the case of gold, increased production from the Knob Hill and Gold King mines accounted for the advance by offsetting a decline in silver output by the Holden property. About 78 percent of the State's production in 1953 was supplied by the three mines, with the Knob Hill mine continuing as by far the largest producer.

Of the State total, 59 percent came from gold ore, 21 percent from copper-zinc ore, and nearly all the remainder from lead-zinc and zinc ores.

From 1860 through 1953, production of silver in terms of recoverable metal has totaled 15,192,744 fine ounces valued at $11,248,015.

WYOMING

The only output of gold and silver reported from Wyoming in 1952 was 1.32 ounces of gold dust containing 1.12 fine ounces of gold (rounded to 1 fine ounce worth $35 for statistical purposes) and 0.11 fine ounce of silver (omitted in rounded production statistics). The gold dust was recovered from the Las Vegas placer in the Atlantic City district, Fremont County.

Gold mining in Wyoming during the 10-year period ended with 1952 consisted of small-scale intermittent operations except in 1947, when the Carissa mine in the Atlantic City district, equipped with a 70-ton amalgamation-cyanidation mill, produced 1,455 ounces of gold and 84 ounces of silver, valued altogether at $51,000.

The total production of gold and silver in Wyoming, in terms of recovered metals, from 1867 through 1952 has been 80,041 fine ounces of gold valued at $1,909,763, and 74,821 fine ounces of silver valued at $51,914.

The only production of gold in Wyoming in 1953 was 1 ounce valued at $35 recovered from the Hermit Creek placer in the South Pass district of Fremont County. Silver production totaled 11 ounces valued at $10, recovered from copper ore shipped from the Joycie claim in the Bosler area of Albany County.

The total production of gold and silver in Wyoming, in terms of recovered metals, from 1867 through 1953 has been 80,042 fine ounces of gold valued at $1,909,798, and 74,832 fine ounces of silver valued at $51,924.

STATES EAST OF THE MISSISSIPPI

ILLINOIS, NEW YORK, PENNSYLVANIA, AND VERMONT (1952)

Mines in Illinois, New York, Pennsylvania, and Vermont produced in 1952 a total of 1,662 fine ounces of gold valued at $58,170 and 97,284 fine ounces of silver valued at $88,046. Output from these States in 1951 totaled 2,335 fine ounces of gold, valued at $81,725 and 105,908 fine ounces of silver valued at $95,852.

Illinois: Illinois mines yielded 3,781 ounces of silver in 1952, all of which was recovered in the smelting of lead concentrates produced as a co- or by-product with fluorspar from properties in southern Illinois. The principal producer was the Ozark-Mahoning Company which operated several fluorspar mines and its all-flotation custom mill at Rosiclare, Hardin County. The State's output of silver in 1951 was 3,465 ounces.

Maryland: No gold or silver was reported produced in Maryland in 1952. In 1951 production of one ounce of gold was credited to the Maryland mine in Montgomery County.

New York: Silver is recovered as a by-product from smelting lead concentrates produced at the Balmat mine of the St. Joseph Lead Company in St. Lawrence County. Production in 1952 totaled 38,895 ounces compared with 47,568 ounces in 1951. The drop in output was due principally to a labor strike which closed the Balmat mine from July 1 through September 14.

Pennsylvania: All the gold and silver produced in Pennsylvania for a number of years has been from the Cornwall mine of the Bethlehem Steel Company in Lebanon County. The chief products of the mine, which has been operated since the middle of the 18th century, are iron and copper. Output of gold and silver in 1952 was 1,500 ounces and 9,247 ounces, respectively. In 1951 production was 2,179 ounces of gold and 13,575 ounces of silver. The nation-wide steel strike which halted iron mining at the property in mid-summer of 1952 was the major factor contributing to the decline in output as compared with 1951.

Vermont: The Vermont Copper Company, only active producer of gold, silver, and copper in the State in 1952, operated its Elizabeth mine and 500-ton flotation mill in Orange County throughout the year. Copper ore treated yielded 162 ounces of gold and 45,361 ounces of silver compared with 156 ounces of gold and 41,300 ounces of silver in 1951.

GEORGIA

Output of gold in 1953 was 2 fine ounces valued at $59. No output was reported in 1952. This gold was obtained from stream gravel deposits by Homer Mundy, Gainesville, from the Boles Mine in Gwinnett County.

ILLINOIS, NEW YORK, PENNSYLVANIA, VERMONT, AND VIRGINIA (1953)

Mines in Illinois, New York, Pennsylvania, Vermont, and Virginia, produced in 1953 a total of 1,305 fine ounces of gold valued at $45,675, and 89,005 fine ounces of silver valued at $80,554. Output from these States in 1952 totaled 1,662 fine ounces of gold valued at $58,170, and 97,284 fine ounces of silver valued at $88,046.

Illinois: Illinois mines yielded 2,338 ounces of silver in 1953, all of which was recovered in the smelting of lead concentrates produced as a co- or by-product with fluorspar from properties in southern Illinois. As in previous years the principal producer was the Ozark-Mahoning Co. which operated several fluorspar mines in Hardin County and its all-flotation custom mill at Rosiclare. The State's output of silver in 1952 was 3,781 ounces. Labor strikes at the mines during the summer months of 1953 resulted in loss of production and accounted in part for the decline in silver output from the 1952 level.

New York: Silver is recovered as a by-product from smelting lead concentrates produced at the Balmat mine and mill of the St. Joseph Lead Co. in St. Lawrence County. Production in 1953 totaled 35,398 ounces compared with 38,895 ounces in 1952. The mine and mill were operated six days a week, three shifts per day, throughout 1953.

Pennsylvania: All the gold and silver produced in Pennsylvania for a number of years has come from the Cornwall Mine of the Bethlehem Steel Co. in Lebanon County. The chief products of the mine, which has been operated since the middle of the Eighteenth Century, are iron and copper. Output of gold and silver in 1953 was 1,134 ounces and 6,972 ounces, respectively. In 1952 production was 1,500 ounces of gold, and 9,247 ounces of silver.

Vermont: The Vermont Copper Co. continued in 1953 to be the only active producer of gold, silver, and copper in the State. The company operated its Elizabeth Mine and flotation mill in Orange County throughout the year. Copper ore treated yielded 171 ounces of gold and 43,128 ounces of silver, compared with 162 ounces of gold and 45,361 ounces of silver in 1952. Improvements at the property during the year included expansion of mill capacity from 800 tons per day to 950 tons.

Virginia: A total of 1,169 ounces of silver was recovered as a by-product of lead-zinc mining in Virginia during 1953.

TENNESSEE

Production from Tennessee in 1952 was 241 fine ounces of gold, valued at $8,435 and 57,569 fine ounces of silver valued at $52,103. In 1951, the output totaled 111 ounces of gold valued at $3,885 and 24,960 ounces of silver valued at $22,590, indicating increases in 1952 over 1951 in output and value of 117 percent for gold and 131 percent for silver. Of the 1951 total, 3 ounces valued at $105 was produced in Georgia.

In 1952, all of the gold reported was obtained as a by-product of copper mining operations and was recovered from slimes in the electrolytic refining of the copper. No other lode gold was produced in the southeastern States, nor was there reported any gold output from placer operations. By-product gold in 1952, as in other recent years, came from the sulphide ores mined by the Tennessee Copper Company in Polk County, Tennessee.

All of the silver produced in 1952 was recovered as a by-product from sulphide ores concentrated by the Tennessee Copper Company from its group of five mines in the Copperhill-Ducktown area in southeastern Tennessee.

Output from Tennessee in 1953 totaled 293 fine ounces of gold, valued at $10,255 and 68,935 fine ounces of silver valued at $62,390. In 1952, production totaled 241 ounces of gold valued at $8,435 and 57,569 fine ounces of silver valued at $52,103, indicating increases in 1953 over 1952 in output and value of 22 percent for gold and 20 percent for silver.

All of the gold reported in 1953 was recovered as a by-product of copper mining. The by-product gold in 1953, as in other recent years, was obtained from the sulphide ores mined by the Tennessee Copper Company in Polk County, Tennessee. No placer gold was reported from Tennessee in 1953.

Silver produced in 1953 was recovered as a by-product from the sulphide ores concentrated by the Tennessee Copper Company from mines in the Copperhill area in Polk County, in the southeastern part of the State. No placer silver was reported.

Distribution of gold and silver production of the United States, in fine ounces, for 1952, by sources of production (Table furnished by the Bureau of Mines)

State	Gold			Silver		
	Lode mines	Placer mines: Floating bucket-line dredges	Placer mines: All other	Dry and siliceous ores[1]	Lead ores[2]	Copper ores
Alaska	1,267	198,524	40,766	32,753	233	.....

[1] The Annual Assay Commission for 1954 met at the Philadelphia Mint the second Wednesday in February, as required by law, to examine and test the weight and fineness of United States coins reserved from the 1953 calendar year's coinage. Members of this Commission are partly ex officio, and the others, citizens who serve without compensation, are appointed each year by the President of the United States. In accordance with statutory requirements, one silver coin from each 10,000 silver coins manufactured at the several mints is selected at random and reserved for this examination. At conclusion of the tests the Commission reported that the coins met fully the prescribed legal standards, and that the trial was entirely satisfactory.

In addition to tests of the Annual Assay Commission, special assays involving comprehensive metallurgical and chemical tests from each day's production of silver coins are made in the laboratory of the Director of the Mint in Washington. Coins are not released for circulation until such tests have been conducted and the coins found to meet legally prescribed standards.

Silver coins manufactured by United States Mints for foreign governments are also tested in the laboratory to determine that legally prescribed coinage standards of the countries concerned are fully met.

[2] Includes 1,467 tons silver; 4,394 tons copper; 173 tons nickel; and 195 tons zinc and tin.

[3] Booker T. Washington-George Washington Carver design.

1-cent pieces	1,072,055,444	10,720,554.44	3,676
Total	1,536,635,844	83,166,146.74	6,193

[1] Includes 130,439 sets of proof coins sold.

TABLE 18.--Uncurrent and mutilated United States coins, including assay pieces, returned to Mint institutions and melted, calendar year 1953

Class and denomination	Number of pieces	Face value
Gold:		
Double eagles	2,356	$47,120.00
Eagles	1,770	17,700.00
Half eagles	1,895	9,475.00
$3 pieces	4	12.00
Quarter eagles	669	1,672.50
$1 pieces	42	42.00
Total gold	6,736	76,021.50
Silver:		
Trade dollars	.....	.....
Standard dollars	315,767	315,767.00
Half dollars	612,933	306,466.50
Quarter dollars	1,864,148	466,037.00
20-cent pieces	33	6.60
Dimes	3,593,794	359,379.40
Half dimes	385	19.25
3-cent pieces	375	11.25
Total silver	6,387,035	1,447,647.00
Nickel:		
5-cent pieces	1,719,442	85,972.10
3-cent pieces	299	8.97
Nickel--Continued		
1-cent pieces	338	$3.38
Total nickel	1,720,079	85,984.45
Copper:		
1-cent pieces	730	7.30
½-cent pieces	16	.08
Total copper	746	7.38
Bronze and copper-zinc:		
2-cent pieces	408	8.16
1-cent pieces	6,990,412	69,904.12
Total bronze and copper-zinc	6,990,820	69,912.28
Copper-silver-manganese 5-cent pieces	654,996	32,749.80
Zinc-coated steel 1-cent pieces	11,279,607	112,796.07
Total minor	20,646,248	301,449.98
Grand total	27,040,019	1,825,118.48

TABLE 19.--Gold transactions of the Bureau of the Mint, calendar year 1953, in fine ounces (to thousandths of an ounce)

Item	Philadelphia Mint	San Francisco Mint	Denver Mint	New York Assay Office	Seattle Assay Office	Fort Knox Depository	Total
1. Gold held at beginning of calendar year 1953	116,764.587	16,168,218.526	166,553,444.077	122,790,214.482	186,123.050	356,669,010.306	662,483,775.028
2. Increases during the calendar year 1953:							
(1) Deposits of newly mined domestic bullion:							
(a) Unrefined	81.951	138,619.598	90,945.935	14,367.961	274,742.006	.....	518,797.451
(b) Refined	.....	31,333.832	779,645.105	100,127.262	6.763	.....	911,112.962
	81.951	169,953.430	870,591.040	114,495.223	274,748.769	.....	1,429,870.413

I--United States Mint[1]

Location of mints	Act under which established	Distinguishing mint marks	Period covered in coinage data
Philadelphia, Pa.	Apr. 2, 1792	None, except letter P on copper-silver-manganese 5 cents.	1793-1954.
San Francisco, Calif.	July 3, 1852	S	1854-1954.
Denver, Colo.	Apr. 21, 1862	D	1906-54.
New Orleans, La.	Mar. 3, 1835	O	1838-61. 1879-1909.
Carson City, Nev.	Mar. 3, 1863	CC	1870-93.
Charlotte, N. C.	Mar. 3, 1835	C	1838-61.
Dahlonega, Ga.	do	D	1838-61.

[1] The act of Congress dated April 2, 1792, provided for coinage of gold, silver, and copper, and established the first United States Mint in the city of Philadelphia, then the Nation's Capital. Subsequent legislation set up branch mints and assay offices in various parts of the country. The registry of annual coinage now accurately represents the year of actual date on the coins. During the early years the deliveries from the manufacturing division to the issuing division were not always completed within the year of the date on the coins.

II--Authority for United States coinage, with class, denomination, standard weight, fineness, and total coined

GOLD COINAGE[1]

Denomination	Authorizing act	Standard weight	Standard fineness	Total coined to 1933 (May 19)	
		Grains	*Thousandths*	*Pieces*	*Face amount*

[1] Dollar of 1792 discontinued by act of Jan. 18, 1837; dollar 1837 discontinued by act of Feb. 12, 1873.

[2] Silver-dollar coinage:

Act Apr. 2, 1792:		
From 1792 to 1805	$1,439,517	
During 1836	1,000	
		$ 1,440,517
Act Jan. 18, 1837: From 1839 to Feb. 12, 1873		6,790,721
Act Feb. 28, 1878 (Bland-Allison Act)		378,166,793
Act July 14, 1890 (Sherman Act), to date of repeal of purchasing clause thereof		
Oct. 31, 1893	$36,087,285	
	42,139,872	
Act Nov. 1, 1893, to June 12, 1898	108,800,188	
Act June 13, 1898, war revenue bill		187,027,345
Act Mar. 3, 1887 and 1891, trade-dollar conversion		5,078,472
Act Apr. 23, 1918, Pittman Act replacement (represents equivalent number of dollars converted into bullion--259,121,554 for export to India and 11,111,168 for domestic subsidiary coin):		
Old design, since Feb. 21, 1921	$86,730,000	
Peace dollar, since Dec. 21, 1921	183,502,722	
		270,232,722
Act May 12, 1933 (sec. 43), Executive proclamation, Dec. 21, 1933		7,021,528
Act June 19, 1934 (sec. 7), Executive proclamation, Aug. 9, 1934		53,029
Total		855,611,127

[3] Coinage limited to export demand by joint resolution July 22, 1876. Redeemed $7,689,036 at face amount under act Mar. 3, 1887, converted into 5,078,472 standard dollars and $2,889,011 subsidiary silver coin.

[4] Discontinued by act of Mar. 3, 1887.

[5] 12 1/2 grams, or 192.9 grains.

[6] 6 1/4 grams, or 96.45 grains.

[7] Discontinued by act of May 2, 1878.

[8] 5 grams, or 77.16 grains.

[9] 2 1/2 grams, or 38.58 grains.

[10] Discontintued by act of Feb. 12, 1873.

II.--Authority for United States coinage, with class, denomination, standard weight, fineness, and total coined--Continued

MINOR COINAGE

(Minor coinage was confined by law to the mint at Philadelphia until the act of April 24, 1906. Minor coins were first manufactured at the mint at Philadelphia in 1793, at San Francisco in 1908, and at Denver in 1911)

REPORT OF THE DIRECTOR OF THE MINT ON THE WORLD'S MONETARY STOCKS OF GOLD, SILVER, AND COINS

Report of the Director of the United States Mint on the World's Monetary Stocks of Gold, Silver, and Coins

Authoritative information on foreign coinage systems, monetary gold and silver, and related subjects is secured directly from foreign governments by the Director of the United States Mint by means of Interrogatories sent yearly through the Department of State to United States foreign service officers stationed abroad.

In general, information submitted on the Interrogatories is published herein as received, with the addition of equivalents. World production of gold and silver are compilations of the Bureau of Mines, United States Department of the Interior.

CONTENTS

1. List of coinage mints.
2. Coinage of nations during the year ended December 31, 1953.
3. Coinage of Chile during the year ended December 31, 1952. (See previous year's Report for coinage of other nations in 1952.)
4. Consumption of metals in the 1953 coinage of nations.
5. Silver coins withdrawn from active circulation in specified countries during 1953.
6. Estimated quantity of gold and silver used in the industrial arts in various countries during 1952 and 1953.
7. Secondary gold and silver deposited with the monetary authority in specified countries during 1953.
8. Characteristics of coins in circulation in 1953.
9. Gold and silver monetary stocks of principal countries of the world at end of calendar year 1953.
10. World production of gold, 1944-48 (average), and 1949-53.
11. World production of silver, 1944-48 (average), and 1949-53.
12. Summary of world production of gold and silver since the discovery of America.

Coinage mints of the world

[So far as reported to the Director of the United States Mint]

Country	Name of mint	Location
United States	Office of Director of the Mint	Treasury Department, Washington 25, D.C.
Do	Philadelphia Mint	16th and Spring Garden Sts.,Philadelphia, Pennsylvania.
Do	Denver Mint	Colfax and Delaware Sts., Denver, Colorado.
Do	San Francisco Mint	Buchanan St. and Duboce Ave., San Francisco, California.

[1] Gold is valued on the basis of the legal gold content of the United States dollar (symbol $), i.e., 15-5/21 grains of gold nine-tenths fine. The equivalent dollar value of a fine troy ounce of gold is $35; a gram fine, $1.125275986; and a kilogram fine, $1,125.275986. Silver bullion, except for the United States, is valued on the basis 85-1/4 cents per troy ounce 999/1000 fine, the New York silver bullion market quotation for the month of December 1953. The equivalent dollar value of a fine troy ounce of silver is calculated at $0.85335; a gram fine, $0.027436; and a kilogram fine, $27.436. Silver coins are converted from the nominal or face value in foreign currencies to U. S. dollars at the exchange rates shown in the table and further identified in footnote 2 following.

[2] Exchange rates are December 1953 averages of noon buying rates for cable transfers in New York for foreign currencies as certified to the Secretary of the Treasury by the Federal Reserve Bank of New York for the following countries: Austria, Brazil, Canada, Finland, France, (French Morocco), India, Ireland, Malaya, Mexico, Netherlands, New Zealand, Norway, Philippines, Portugal, (Portuguese East Africa), Sweden, Switzerland, Union of South Africa, United Kingdom, and Uruguay. Other rates are par values established under the Articles of Agreement with the International Monetary Fund and/or domestic rates for U. S. dollars in the countries concerned.

[3] Includes regular Treasury holdings and U. S. Exchange Stabilization Fund holdings.

[4] Silver bullion holdings of the U. S. Treasury totaled 1,705,386,900 fine ounces valued at $2,171,453,345 on Dec. 31, 1953, consisting of 1,655,739,338 ounces at monetary value of $1.2929+ per fine ounce totaling $2,140,753,887 and 49,647,562 ounces at cost value totaling $30,699,458.

[5] British silver coins.

[6] Data are for end of Government financial year. (British East Africa, June 30, 1953. Iran, Mar. 19, 1953).

[7] Includes holdings of the Exchange Fund Account and the Royal Canadian Mint.

[8] Includes silver, nickel, and bronze coins held by the Bank of Canada.

[9] Data are not available for publication.

[10] Includes Salvadoran and U. S. coins which also circulate.

[11] Includes central bank holdings only. Stabilization Fund and/or other gold holdings are not available for publication.

[12] U. S. coins are not legal tender in Honduras after Dec. 31, 1953 and are being withdrawn from circulation.

[13] Silver bullion includes silver coins.

[14] Approximate.

[15] Malayan silver coins, demonetized as from Dec. 31, 1952, are being replaced by cupronickel coins of the same denomination.

[16] Silver coins are being replaced with cupronickel coins of the same denominations.

[17] Less than 500.

[18] Includes Panamanian and U. S. silver and minor coins held by the banks. Amount in circulation not available.

[19] Par value of the guarani to be changed from $0.166667 to $0.0666667 on Jan. 1, 1954.

[20] Former issue of 10 and 5 escudo silver coins was ordered to be withdrawn from circulation in the period Nov. 1953-March 1954.

[21] Does not include gold coins and bullion valued at approximately $13 million held by commercial banks.

[22] For gold, represents difference between estimated world total below and sum of items above. Silver figures are confidential and publication withheld.

[23] World total gold holdings as estimated by the Board of Governors of the Federal Reserve System. Includes reported gold holdings of central banks and governments and international institutions, unpublished holdings of various central banks and governments, estimated holdings of British Equalization Account, and estimated official holdings of countries from which no reports are received.

World production of gold, 1944-48 (average) and 1949-53, by countries[1], in fine ounces[2]

[1] Figures used derived in part from American Bureau of Metal Statistics. For some countries accurate figures are not possible to obtain owing to clandestine trade in gold (as for example, French West Africa).
[2] This table incorporates a number of revisions of data published in previous gold chapters.
[3] Refinery production. Excludes production of the Philippines.
[4] Imports into United States.
[5] Exports.
[6] Estimate.
[7] Data not available;estimate included in total.
[8] Average for 1954-48.
[9] Includes gold mined in Transylvania, which temporarily formed part of Hungary.
[10] Output from U.S.S.R. in Asia included with U.S.S.R. in Europe.
[11] Production is believed to have decreased because of a probable diversion of forced labor into other activities.
[12] Includes Ruanda-Urundi.
[13] Estimate based on reported production.
[14] Year ended September 30 of year stated.
[15] Included is yield from Nkana mine refinery slimes accumulated during the war: 1946-48 (average), 2,713 ounces; 1949, 972; 1950, 1,296; 1951, 756; 1952, 2,503; and 1953, 2,999.

World production of silver, 1944-48 (average) and 1949-53, by countries[1], in fine ounces[2]

[1] Silver is also produced in Bulgaria, Cyprus, Hong Kong, Malaya, Indonesia, Sarawak, and Sierra Leone but production data are not available; estimates are included in total.
[2] This table incorporates a number of revisions of data published in previous silver chapters.
[3] Imports into the United States. Scrap is included in this figure in many instances, most notably in the case of Cuba.
[4] Exports.
[5] Data not available; estimate included in total.
[6] Estimate.
[7] Data represents Trianon Hungary after October 1944.
[8] Includes Ruanda-Urundi.
[9] Recovered from an accumulation of refinery slimes.
[10] Year ended May 31 of year following that stated.

345738 O - 55 - 11

Summary of world production of gold and silver since the discovery of America

Period or calendar year[1]	Gold		Silver	
	Fine ounces	Value[2]	Fine ounces	Commercial value[2]
1493-1885	358,004,700	$7,400,615,000	6,667,600,700	$8,872,618,500
1886-1941	1,058,003,400	25,938,995,800	10,848,362,400	6,673,957,000
1942	36,200,000	1,267,000,000	250,000,000	96,612,500
1943	28,800,000	1,008,000,000	217,100,000	97,829,600
1944	26,200,000	917,000,000	184,600,000	83,184,500
1945	26,100,000	913,500,000	162,000,000	84,123,400

[1] Summarized from tables previously published in the Annual Reports of the Director of the Mint. Data for the years 1493-1885 are based upon a table of averages for certain periods compiled by Dr. Adolph Soetbeer; for the years 1886-1941 are from country tables compiled by the Bureau of the Mint; and annual data from 1942 are from country tables (corrected to Nov. 15, 1953) compiled by the Bureau of Mines, U. S. Department of the Interior.

[2] Gold is valued at $20.67183462 per fine ounce from 1493 through 1933, and at $35 per fine ounce thereafter. Silver is valued at commercial rates shown in tables published in the various Annual Reports of the Director of the Mint.

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., August 11, 1950.

SIR: In compliance with the provisions of section 345 of the Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints, assay offices, and bullion depositories of the United States for the fiscal year ended June 30, 1950, being the Seventy-eighth Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1949.

OPERATIONS OF THE MINTS, ASSAY OFFICES, AND BULLION DEPOSITORIES

The principal functions of the Bureau of the Mint consist of the manufacture of domestic and foreign coins; the acquisition of gold and silver, payments for which are made on the basis of mint assays; the safeguarding of the Government's holdings of the monetary metals, including coins in processing stages until finished and issued; the refining of gold and silver; the administration of regulations pertaining to gold and silver, including the issuance of licenses for the acquisition, ownership, possession, use, and exportation of gold for industrial, professional, and artistic purposes; and the production of medals and other decorations.

The Office of the Director of the Mint in Washington administers all activities of the Bureau of the Mint. During the fiscal year 1950 seven field institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; assay offices at New York City and Seattle; gold bullion depository at Fort Knox, Ky.; and silver bullion depository at West Point, N. Y., which is an adjunct of the New York Assay Office. Electrolytic refineries are maintained at the San Francisco, Denver, and New York City institutions. The medal and engraving departments are located at the Philadelphia Mint. At the close of the fiscal year 1950 the number of employees of the departmental and field institutions totaled 943 compared with 1,272 at the beginning of the year.

Domestic coinage.—Production of United States coins during the fiscal year 1950 totaled 497,271,759 pieces with a value of $22,107,-498.66.

The gross weight of the coins totaled 2,056 tons. Subsidiary silver coins consumed 10,779,819 fine ounces (370 tons) of silver. Minor coins consumed 1,484 tons of copper, 98 tons of nickel, and 63 tons

of zinc and tin. Production of each mint is shown in the following table:

United States coinage during the fiscal year 1950

Denomination	Philadelphia	San Francisco	Denver	Total value	Total pieces
SILVER					
Half dollars [1]	$3,253,463.50	$2,128,045.50	$2,677,602	$8,059,111.00	16,118,222
Quarter dollars	2,890,548.50	432,000.00	662,200	3,984,748.50	15,938,994
Dimes	530,257.30	1,351,000.00	977,000	2,858,257.30	28,582,573
Total silver	6,674,269.30	3,911,045.50	4,316,802	14,902,116.80	60,639,789
MINOR					
Five-cent pieces (cupro-nickel)	2,516,577.70		1,032,250	3,548,827.70	70,976,554
One-cent pieces (bronze)	1,732,404.16	588,600.00	1,335,550	3,656,554.16	365,655,416
Total minor	4,248,981.86	588,600.00	2,367,800	7,205,381.86	436,631,970

Total				17,877,944		17,877,944
Grand total			66,300,000	23,827,944	4,140,000	94,267,944

Issue of domestic coins.—United States coins issued by the mints during the fiscal year totaled 500,914,823 pieces with a value of $31,261,074.82. Denominations were as follows:

Denomination	Number of pieces issued	Face value
Silver dollars	5,951,406	$5,951,406.00
Half dollars	10,574,887	5,287,443.50
Quarter dollars	31,210,850	7,802,712.50
Dimes	65,784,522	6,578,452.20
5-cent pieces	44,178,226	2,208,911.30
1-cent pieces	343,214,932	3,432,149.32
Total	500,914,823	31,261,074.82

Stock of coins.—The estimated stock of coins in the United States as of June 30, 1950, totaled $1,872,619,658, of which $492,582,858 were silver dollars, $1,001,573,600 were subsidiary coins, and $378,463,200 were minor coins.

Medals.—The number of service medals and other distinguishing devices delivered to the Department of Defense and other Government departments and agencies totaled 29,570 during the fiscal year 1950. In addition, there were 6,073 medals sold to the public.

The outstanding medal made during the year was the gold medal, authorized by Congress, honoring Vice President Alben W. Barkley. An illustration of this medal appears opposite page 1 of this report.

Engraving department.—During the fiscal year 1950 the engraving department issued a total of 4,361 coinage dies, of which 3,517 were domestic and 844 were foreign dies.

Bullion deposit transactions.—Bullion deposit transactions at the mints and assay offices totaled 10,589, including 16 intermint transfers during the fiscal year 1950. These transactions required a total of 17,905 assay determinations, including 638 determinations for intermint transfers.

Acquisitions of gold.—Deposits and purchases of gold during the fiscal year totaled $585,760,504.89, classified as follows:

[On quantity basis, see Bases Used for Mint Service Statistics]	*Value*
Purchases at $20.67+ per fine ounce	$2,412.48
Increment to $35 per fine ounce	1,673.45
Purchases at $35 per fine ounce	572,191,745.88
Domestic coin transferred (melted)	257,993.35
Intermint transfers	13,306,679.73
Total value at $35 per ounce	585,760,504.89

Acquisitions of silver.—During the fiscal year deposits and purchases of silver totaled 107,885,995 fine ounces, classified as follows:

[On quantity basis, see Bases Used for Mint Service Statistics]	*Number of fine ounces*
Newly mined domestic silver	38,228,805
Silver contained in gold deposits, etc	95,326
Silver received in exchange for Government-stamped bars	380,883
Recoinage bullion from uncurrent subsidiary coin	1,860,299
Recoinage bullion from uncurrent silver dollars	205,400
Intermint transfers of silver	117,373
Deposits of silver in trust by foreign governments	11,991,097
Redeposits [1]	55,006,812
Total	107,885,995

[1] Consists of Treasury stock previously held by certain agencies of the Federal Government.

Refinery production of gold and silver.—During the fiscal year the refineries produced 2,267,708 fine ounces of gold and 2,317,468 fine ounces of silver by the electrolytic process. In addition, 3,078,190 fine ounces of gold and silver were subject to fire process only.

Issue bars manufactured.—The mints and assay offices manufactured a total of 79,899 issue bars containing 18,179,815 fine ounces of gold and a total of 1,197 issue bars containing 310,343 fine ounces of silver during the fiscal year.

Stock of unrefined bullion.—At the close of the fiscal year the stock of unrefined bullion at the mints and assay offices, in terms of the assayed fine metal content, amounted to 953 tons of gold and 510 tons of silver.

Monetization of silver bullion.—Silver certificates in the amount of $34,275,555 were issued by the Treasury during the fiscal year against 26,510,000 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. Seigniorage, representing the difference between the cost and the monetary value of silver, amounted to $11,026,197.04.

Sales of gold and silver for industrial use.—Sales of gold bars to licensed purchasers for industrial, professional, and artistic use totaled $82,724,085.89 during the fiscal year. There were no sales of silver under the act of July 31, 1946 (60 Stat. 750) during the period. Sales of gold, by month, during the fiscal year 1950, were as follows:

[On value basis, see Bases Used for Mint Service Statistics]

Month	Value of gold bars issued	Month	Value of gold bars issued
1949:		1950:	
July	$4,076,225.42	January	$7,106,230.21
August	10,647,513.49	February	5,978,765.96
September	11,124,872.74	March	4,414,414.39
October	11,558,868.47	April	3,635,490.33
November	9,051,202.69	May	2,818,062.61
December	6,789,276.86	June	5,523,162.72
		Total	82,724,085.89

Stock of monetary bullion.—The United States stock of gold bullion held by the mint institutions totaled 692,304,800 fine ounces valued at $24,230,633,002 on June 30, 1950. On the same date the mint institutions held 1,151,473,202 fine ounces of silver bullion and, in addition, 180,714,089 fine ounces of silver bullion in special custody account for the Treasurer of the United States. This latter class of silver was formerly held by the Office of Reconstruction Finance Corporation, and is being melted and cast into regular mint bars over a period of time.

Receipts and disbursements of gold bullion.—Receipts and disbursements of gold bullion during the fiscal year 1950, and balances on hand June 30, 1950, as compared with June 30, 1949, are shown in the following table:

Institution	Balance on hand June 30, 1949	Receipts during fiscal year 1950 (details below) [1]	Total	Disbursements during fiscal year 1950 (details below) [1]	Balance on hand June 30, 1950
Philadelphia	$2,508,838.05	$4,209,094.35	$6,717,932.40	$2,745,407.51	$3,972,524.89

Total	719,981,237.90	13,307,843.69	298,764.57	733,587,846.16

Melting and refining and coining departments.—The operations of the melting and refining and of the coining departments of the three mints and the New York Assay Office are shown in the table following. The data are based upon the figures obtained at the settlements of the accounts for the fiscal year 1950. Legal limits of wastage on the whole amount delivered by the superintendent to the operative offices, as prescribed in section 3542 of the Revised Statutes, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold, 0.0005; silver, 0.001.

Operations of the melting and refining and of the coining departments, fiscal year 1950

Sweeps cellar operations.—The two following tables cover sweeps cellar operations for the fiscal years 1949 and 1950. The sweeps cellar operations table appearing on page 7 of the 1949 annual report which was designated as covering the fiscal year 1949, actually covered operations for the fiscal year 1948.

Sweeps cellar operations (includes crushed discarded melting pots, etc.), fiscal year 1949

[Corrected table. Sweeps cellar table in 1949 annual report labeled fiscal year 1949 covered data for fiscal year 1948]

Silver, departmental wastage offset by other departmental surpluses	6,317.69	1,625.70	414.27		8,357.66
Nickel and bronze wastage from minor coinage profits	1,763.22	693.85	788.19		3,245.26
Nickel and bronze wastage offset by charges to foreign metals accounts					
Other wastages, and loss on sweeps from appropriations	1,041.64	605.30	1,757.94	579.45	3,984.33
Total reimbursements	9,122.55	2,924.85	2,960.40	579.45	15,587.25

Production and consumption of gold and silver in the United States.—During the calendar year 1949 the total production of gold and silver refined from ores mined in the several States and Alaska was as follows: Gold, 1,921,949 fine ounces valued at $67,268,215; and silver, 34,944,554 fine ounces.

Gold issued for use in the industrial arts in the United States during the calendar year 1949 aggregated $148,975,571, with a return from industrial use of secondary materials, including old jewelry, plate, scrap, etc., amounting to $40,133,100, giving a net consumption of gold amounting to $108,842,471 during the year.

Silver issued for use in industry and the arts in the United States during the calendar year 1949 aggregated 110,660,459 fine ounces, with a return from industrial use of secondary materials including old silverware, scrap, etc., amounting to 22,660,459 fine ounces, giving a net consumption of silver amounting to 88,000,000 fine ounces during the year.

Annual Assay Commission of 1950.—Section 3547 of the Revised Statutes of the United States provides for an annual test of the domestic coinage executed during each calendar year by a commission of whom part are ex officio members, the others, who serve without compensation, being appointed by the President. The purpose is to secure a due conformity in the silver coins to their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint February 8 and 9, 1950, reported the following results of their examination of the 1949 coinage:

Annual assay coins reserved at various mints during the calendar year 1949

Denomination	Philadelphia		Denver		San Francisco	
	Pieces	Value	Pieces	Value	Pieces	Value
Half dollars	573	$286.50	428	$214.00	377	$188.50
Quarter dollars	944	236.00	1,040	260.00	----------	----------
Dimes	3,094	309.40	2,604	260.40	1,351	135.10
Total	4,611	831.90	4,072	734.40	1,728	323.60

REPORT OF THE COMMITTEE ON COUNTING

Your committee on counting reports that the packages said to contain the pieces reserved by the several mints for the trial of coins, in accordance with title 31, section 351, United States Code, were delivered to us by the Superintendent of the Mint at Philadelphia.

Verification of the coins reserved was made by checking same against the original record of coin deliveries and reservations for assay in respect to the mint at Philadelphia, and against transcripts furnished the committee showing reservations for assay from the mints at Denver and San Francisco.

At random we selected from the deliveries a certain number of packages, and it was the intention of the committee to include all denominations. Of the packages selected, the coins contained therein were counted, and the number of coins contained in each envelope is noted in the tables below for each mint.

REPORT OF THE COMMITTEE ON WEIGHING

The committee on weighing reports that it selected at random a total of 41 coins, consisting of 19 coins from the Philadelphia Mint, 12 coins from the Denver Mint, and 10 coins from the San Francisco Mint. These coins were taken from 38 different deliveries and are believed to be adequately representative of the year's coinage of each mint.

The coins were weighed directly against weights from the set of coin and grain weights regularly reserved for the use of the Commission. This set was delivered under seal of the National Bureau of Standards, and was accompanied by a certificate from the Bureau showing that the errors of all weights of the set were negligible.

Weighings were made with a precision of 0.01 grain on a balance, the sensitiveness, accuracy, and reliability of which was tested and found adequate before the beginning of the work on February 8, and again on the morning of February 9.

It is to be noted that the weight of each coin was well within the tolerance allowed by law.

The following table shows the maximum deviation of the heaviest and lightest coins of the denominations set forth below, as found from individual weighings:

Denomination	Legal deviation allowed	Philadelphia		Denver		San Francisco	
		Heavy	Light	Heavy	Light	Heavy	Light
1949	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Half dollar	4	1.1	0.87	0.57	1.31	0.54	0.34
Quarter dollar	3	.70	.49	.91	.48	----------	----------
Dime	1.5	.37	.87	----------	1.43	.56	.08

REPORT OF THE COMMITTEE ON ASSAYING

In compliance with title 31, section 363, United States Code, the committee on assaying is pleased to report that the assays have been completed on samples taken from the different lots of coin, representing all denominations of silver coined during the calendar year 1949, by the United States mints at Philadelphia, Denver, and San Francisco.

No gold was coined at any of the mints during the year.

The results of assays on individual coins and mass melts of coins are satisfactory, being well within the limits of tolerance, which is six one-thousandths for silver coins.

The highest and lowest assay on an individual coin from each of the three mints is as follows:

	Fineness	
	Highest	*Lowest*
Philadelphia	899.7	898.6
Denver	900.0	898.4
San Francisco	900.4	899.0

Result of mass melting

	Fineness
Philadelphia Mint	899.7
Denver Mint	899.0
San Francisco Mint	899.5

The assay balances were tested and found to be in adjustment, the nitric acid used for assaying was found to be free of chlorine and the weights used for weighing the samples for assay were checked against a set that had been standardized by the National Bureau of Standards.

Management program.—A management improvement program vigorously projected in 1950 and directed toward continuing improvements in operating procedures has produced revolutionary results in the manufacturing processes of coinage during the present fiscal year.

The massive melting and rolling equipment in the Denver Mint, which a year ago was in the experimental stage of operation, has been brought to a high state of efficiency. In it is processed a 400-pound bronze ingot in place of the 6-pound ingot, formerly processed in small rolling mills. It has also eliminated the hand pouring method heretofore used. Coincident with the installation of modern annealing equipment now pending, this equipment will be used for nickel and silver coinage.

A new type water-cooled mold, invented by mint technicians at the Philadelphia Mint, has resulted in a 23 percent reduction in silver ingot melting costs during the year. Experiments are now being conducted to utilize this equipment for production of nickel and

bronze ingots. Recent realignment of the melting operations and other mechanical changes at the Philadelphia Mint will result in important economies.

With the installation of more powerful motors on the rolling mills at the San Francisco Mint provision will be made for the processing of longer and wider ingots, and as a result an increase can be made from 100 to 300 percent in the production of coin blanks without increasing personnel. The output of 1-cent blanks will be doubled and dimes quadrupled; other denominations will come within that range.

Personnel of the Bureau of the Mint.—The following table summarizes by departments the personnel of the Bureau of the Mint on June 30, 1950, compared with June 30, 1949:

Bureau of the Mint	Established under act of—	Number of employees, by departments

The foregoing report, covering the operation of the mints, assay offices, and the bullion depositories of the United States for the fiscal year ended June 30, 1950, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

Hon. JOHN W. SNYDER,
Secretary of the Treasury.

912795—51——2

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES FOR THE CALENDAR YEAR 1949

REPORT OF THE DIRECTOR OF THE MINT ON THE
PRODUCTION AND CONSUMPTION OF GOLD AND
SILVER IN THE UNITED STATES FOR
THE CALENDAR YEAR 1949

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1949

INTRODUCTION

The official estimate of production of gold and silver in the United States, made by the Bureau of the Mint, is based upon arrivals at United States mints and assay offices and at privately owned refineries. The mints and assay offices determine the State source of all newly mined unrefined material at the time deposits are received. The State source of material received by privately owned refineries is determined from information submitted by them and by intervening smelters, mills, etc., involved in the reduction processes.

The estimated industrial consumption of gold and silver is based upon issues by mints and assay offices, private refiners, dealers and manufacturers, plus an estimate of domestic coin melted for industrial use. From the total thus calculated there is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net materials consumed.

Gold production.—A total of 1,921,949 fine ounces of gold with a value of $67,268,215 was produced from ores mined in 18 States and the Territory of Alaska during the calendar year 1949. States of leading production included South Dakota in first place, California in second place, followed by Utah, Alaska, Nevada, Arizona, and Colorado in that order, these seven States accounting for 90 percent of the total United States production. About one-half of the States increased their output in varying amounts over 1948, South Dakota leading with a 20 percent increase. The remaining States, however, declined in the amount of production, the United States total averaging a 5 percent decrease in 1949 from the previous year. A comparison of 1948 and 1949 production, by State of output, is shown in the following table:

Production of gold mined in the several States and Territory of Alaska (based upon arrivals at United States mints and assay offices and at private refineries)

State in which mined	Calendar year 1948		Calendar year 1949		Increase or decrease (−) in 1949	
	Fine ounces	*Value* [1]	*Fine ounces*	*Value* [1]	*Fine ounces*	*Percent* [2]
Alaska	221,471	$7,751,485	226,666	$7,933,310	+5,195	+2.3

Total	2,025,480	70,891,800	1,921,949	67,268,215	−103,531	−5.1

[1] Gold valued at $35 per fine troy ounce.
[2] Percentage change not calculated for States with lower output.

The grand total production of gold in the United States and its possessions since 1792 amounts to 282,087,737 fine ounces with a value of $6,593,601,890. For a summary of production by calendar years 1792–1943, see page 36 of the Annual Report of the Director of the Mint for the Fiscal Year Ended June 30, 1944, and for later years, each succeeding annual report.

Silver production.—A total of 34,944,554 fine ounces of silver was produced from ores mined in 23 States and the Territory of Alaska during the calendar year 1949. States of leading production included Idaho in first place, followed by Montana, Utah, Arizona, Colorado, and Nevada. These six States produced nearly 34 million ounces, or 93 percent of the total. Total production declined 11 percent over the previous year, with 11 States showing an increased output and 13 a decreased output. A comparison of 1948 and 1949 production, by State of output, is shown in the following table:

Production of silver mined in the several States and Territory of Alaska (based upon arrivals at United States mints and assay offices and at private refineries)

Washington	431,529	390,556	404,823	366,385	−26,706	−6.2
Wyoming	4	4	32	29	+28	
Total	39,228,468	35,503,744	34,944,554	31,626,586	−4,283,914	−10.9

[1] Valued at $0.905+ per fine ounce, the purchase price of the Treasury for newly mined domestic silver, in accordance with the act of July 31, 1946.
[2] Percentage change not calculated for States with lower output.
[3] Less than 1 fine ounce.

The grand total production of silver in the United States and its possessions since 1792 amounts to 4,024,878,034 fine ounces. For a summary of production by calendar years 1792–1943, see page 36 of the Annual Report of the Director of the Mint for the Fiscal Year Ended June 30, 1944, and for later years, each succeeding annual report.

Gold and silver consumption.—During the calendar year 1949 the mint institutions, private refiners, and dealers of the United States issued for industrial, professional, and artistic use, gold in the amount of $108,842,471 and silver in the amount of 88,000,000 ounces. Details are shown in the following statement:

Item	Gold	Silver
	Value [1]	*Fine ounces*
Government-stamped bars issued by mints and assay offices	$90,550,071	[2] 222,703
Bullion in various forms issued by private refiners and dealers	58,425,500	110,360,412
United States coin (estimated)		77,344
Total amount of material issued	148,975,571	110,660,459
Old jewelry, plate, scrap, etc., returned to private refiners, dealers, and to monetary use	40,133,100	22,660,459
Net amount of material issued	108,842,471	88,000,000

[1] Gold valued at $35 per fine ounce.
[2] There were no sales of silver under authority of the act of July 31, 1946, during the calendar year 1949.

The value of fine gold bars issued monthly in exchange for cash for industrial, professional, and artistic use, by the mint institutions, during the calendar year 1949, was as follows:

[On value bases, see Bases Used for Mint Service Statistics]

Month	Value of gold bars issued	Month	Value of gold bars issued
1949:		1949—Continued	
January	$2,432,639.81	August	$10,647,513.49
February	2,982,372.57	September	11,124,872.74
March	4,140,137.64	October	11,558,868.47
April	3,714,241.61	November	9,051,202.69
May	3,541,797.51	December	6,789,276.86
June	8,668,561.68		
July	4,076,225.42	Total	78,727,710.49

REVIEW OF GOLD AND SILVER MINING INDUSTRY

A review of the gold and silver mining industry in the various States and Alaska for the calendar year 1949, for which acknowledgment is made to the Bureau of Mines, United States Department of the Interior, follows. It should be noted that production figures stated therein are based on a mine canvass of recoverable metal and, due principally to the time lag involved before this material reaches the mints and assay offices and private refineries, will not necessarily agree, on a yearly basis, with the figures published by the Bureau of the Mint.

ALASKA

Production of gold from Alaskan mines in 1949 was lower for the second consecutive year, the recorded output of 229,416 fine ounces (in terms of recoverable metal), valued at $8,029,560, being 8 percent below the total for 1948, according to Alfred L. Ransome, United States Department of the Interior, Bureau of Mines. Silver production of 36,056 fine ounces, valued at $32,633, was 46 percent less than the output in the previous year. Comparative production (and value) in 1948 was: Gold, 248,395 ($8,693,825); and silver, 67,341 ounces ($60,947).

Gold mining, which has maintained its position as the backbone of the mining industry in Alaska, has had ever-increasing difficulty in balancing high costs of mining, labor, and supplies against an established price for its product which has remained unchanged at $35 per fine ounce of gold since 1934. Although the supply of labor in 1949 was better than at any time since the war, the narrowing margin between the high operating costs and the official price for gold was not conducive to operation of any but the more efficient enterprises. Natural or unprocessed gold continued to be sold legally on the open market by a number of operators at prices varying from $3 to $8 per ounce over the official price. Included with the recorded production for 1949 are 9,836 fine ounces of gold contained in natural gold specifically reported by 10 producers as having been sold on the open market. In addition, 8,656 ounces of natural-gold bullion was reported sold, but this quantity is not included statistically because of insufficient data. Available information indicated that an undetermined quantity of natural gold (estimated to be 5,000 ounces) was sold by 11 producers who did not report specifically. Although these data are incomplete it can be assumed that approximately 22,000 ounces of natural-gold bullion originating from Alaskan mines in 1949 were sold. A comparable total of 18,000 ounces was estimated sold in 1948.

The greatest proportion of gold came from a relatively few mines; the leading 15 gold-producing mines (14 placer and 1 lode) in 1949 yielded 73 percent of the total recorded gold output. The Fairbanks district in the Yukon River Basin region ranked first in the Territory by a wide margin with 95,020 fine ounces. The five principal producers, which accounted for 57 percent of the total Alaska output of

gold, were in order of output: United States Smelting, Refining & Mining Co. (Fairbanks Unit), Fairbanks district (bucket-line dredges); United States Smelting, Refining & Mining Co. (Nome Unit), Nome district (bucket-line dredges); New York-Alaska Gold Dredging Corp., Tuluksak-Aniak district (bucket-line dredge); Brinker-Johnson Co., Fairbanks district (bucket-line dredge); and Strandberg & Sons, Hughes district (nonfloating washing plant).

Of the silver produced in Alaska in 1949, 90 percent was a byproduct of gold mining, and 10 percent came from lead ore. The most important producer of silver in 1949 was the United States Smelting, Refining & Mining Co. (Fairbanks Unit), which recovered silver as a byproduct of bucket-line dredging operations in the Fairbanks district.

ARIZONA

Arizona's production of gold was slightly less in 1949 than in 1948, but its production of silver was 3 percent greater, according to C. E. Needham and Paul Luff, of the United States Department of the Interior, Bureau of Mines.

The output of gold declined from 109,487 fine ounces valued at $3,832,045 in 1948 to 108,993 fine ounces valued at $3,814,755 in 1949, a loss of about one-half percent. Gold from lode mines decreased from 108,649 ounces in 1948 to 108,428 ounces in 1949, and that from placers from 838 ounces to 565 ounces. Copper ore yielded 78,735 ounces of gold, 72 percent of the State gold in 1949 (84,391 ounces in 1948, 77 percent); zinc-lead ore, 20,429, 19 percent (15,361 ounces in 1948, 14 percent) siliceous ores, 3,081 ounces, 3 percent (6,898 ounces in 1948, 6 percent); and zinc-copper ore, 4,336 ounces, 4 percent (926 ounces in 1948). Ore amalgamated furnished 40 ounces of gold; concentrates smelted, 88,257 ounces; and crude ore smelted, 20,131 ounces.

About 89 percent of the State gold in 1949 came from six districts—Ajo, Big Bug, Copper Mountain (Morenci), Pioneer (Superior), Verde (Jerome), and Warren (Bisbee). The output from these districts decreased from 99,023 ounces in 1948 to 96,498 ounces in 1949. The New Cornelia mine of the Phelps Dodge Corp., Pima County, continued to be the leading gold producer in Arizona. It was followed by the Iron King mine, Yavapai County; the Magma mine, Pinal County; the Copper Queen (Bisbee) branch of the Phelps Dodge Corp., Cochise County; the United Verde branch of the Phelps Dodge Corp., Yavapai County; and the Morenci branch of the Phelps Dodge Corp., Greenlee County. The six properties, all copper mines except the Iron King and part of the Copper Queen, produced 88 percent of the State total gold.

The total gold production in Arizona, in terms of recovered metal, from 1860 through 1949 has been 11,182,499 ounces valued at $278,882,620.

The output of recoverable silver in Arizona in 1949 was 4,970,736 fine ounces valued at $4,498,767, an increase of 3 percent in quantity and 3 percent in value compared with the 1948 output of 4,837,740 fine ounces valued at $4,378,399. A marked increase in production of silver from zinc-copper ore in 1949 prevented a decline in the State silver output. Copper ore yielded 2,412,359 ounces of silver, 49 percent of the State silver in 1949 (2,814,833 ounces in 1948, 58 percent), and zinc-lead ore 1,920,630 ounces, 39 percent (1,544,153 ounces

in 1948, 32 percent); the remainder came principally from siliceous ores, zinc-copper ore, lead ore, and zinc-lead-copper ore. Silver from copper ore decreased 402,474 ounces (14 percent), but that from zinc-lead ore increased 376,477 ounces (24 percent), that from zinc-copper ore 132,278 ounces (201 percent), and that from siliceous ores 16,010 ounces (5 percent).

About 75 percent of the State total silver in 1949 came from six districts—Ajo, Big Bug, Copper Mountain (Morenci), Pioneer (Superior), Verde (Jerome), and Warren (Bisbee). The output from these districts increased from 3,635,596 ounces in 1948 to 3,736,594 ounces in 1949. The Phelps Dodge Corp. continued to be the chief silver producer in Arizona, although its output was about 135,000 ounces (5 percent) less than in 1948; its four properties (Copper Queen, Morenci, New Cornelia, and United Verde) produced 55 percent of the State silver in 1949. Other large silver producers were the Iron King, Magma, San Xavier (Eagle-Picher Mining & Smelting Co.), Ash Peak, and Flux-January-Norton properties.

The total silver production in Arizona, in terms of recovered metal, from 1860 through 1949 has been 307,064,974 ounces valued at $230,276,886.

CALIFORNIA

The output of gold from California mines in 1949 was 1 percent below the 1948 yield, according to R. B. Maurer, of the United States Department of the Interior, Bureau of Mines, but silver production rose 8 percent in 1949 compared with 1948.

Decreased production of gold from placer mines in 1949, due largely to lower yield from bucket-line dredges, was not offset by the increased output from the lode mines, notably in Nevada, Sierra, and Amador Counties.

The low monthly output of gold for 1949, 30,522 ounces, was recorded in January. Monthly output fluctuated slightly from February through November, but a trend toward increasingly larger average monthly yield was evident. Maximum monthly output of 37,228 ounces was attained in December.

The production of recoverable gold from California ores, gravels and re-treated tailings in 1949 was 417,231 fine ounces (including a relatively small quantity in "natural gold" and amalgam sold in the open market) valued at $14,603,085 compared with 421,473 fine ounces (including a quantity in "natural gold" sold, comparable to the 1949 figure) valued at $14,751,555 in 1948. In 1949, 242 lode mines produced 166,683 ounces of gold valued at $5,833,905 and 190 placer mines produced 250,548 ounces of gold valued at $8,769,180. Placer mines supplied 60 percent and lode mines 40 percent of the total in 1949 compared with 68 percent and 32 percent, respectively, in 1948.

Of the gold derived from lode operations, 97 percent was recovered from gold ore, 2 percent from lead ore, and the remainder from zinc ore, gold-silver ore, zinc-lead ore, copper ore, silver ore, and lead-copper ore. Metallurgical data show that 59 percent of the lode gold in 1949 (55 percent in 1948) was recovered by amalgamation of ore and old tailings, 33 percent (38 percent in 1948) by cyanidation of ore, concentrates, and old tailings, 5 percent (4 percent in 1948) by smelting of concentrates, and 3 percent (3 percent in 1948) by smelting ore and old tailings.

The yardage of material washed at placer mines decreased 11 percent, and the output of placer gold dropped 12 percent. Lode-gold production increased 23 percent, whereas tonnage of material treated decreased 6 percent.

In the following data on placer mining, 1948 figures are given in parentheses. Floating dredges of the bucket-line type washed 83,571,900 (94,747,200) cubic yards of gravel and recovered 226,838 (257,171) ounces of gold valued at $7,939,330 ($9,000,985) or 91 (90) percent of the placer gold produced in the State in 1949. Dragline dredges—those having a floating washing plant to which gravel is delivered by a dragline excavator—washed 2,906,600 (3,033,000) cubic yards of gravel which yielded 14,616 (17,029) ounces of gold valued at $511,560 ($596,015). Nonfloating washing plants, to which gravel was delivered by mechanical means, washed 256,500 (261,700) cubic yards of gravel and recovered 3,452 (1,159) ounces of gold valued at $120,820 ($40,565). Hydraulic mines produced 1,587 (1,784) ounces of gold valued at $55,545 ($62,440) derived from 447,900 (363,000) yards of gravel. Drift mining accounted for 95 (229) ounces of gold valued at $3,325 ($8,015) from 1,500 (14,100) cubic yards of gravel and suction dredging produced 1,364 (453) ounces of gold valued at $47,740 ($15,855) from 267,000 (83,000) yards of gravel. Small-scale, hand-operated equipment, including small sluice boxes, long toms, dip boxes, rockers, pans, and dry washers, was used in producing 2,596 (7,731) ounces of gold valued at $90,860 ($270,585).

Due principally to lode mining, Nevada County ranked first among the California gold-producing counties in 1949. Sacramento County was second, because of the productivity of bucket-line dredges. Yuba, Butte, and Siskiyou Counties, which occupied third, fourth, and fifth places, respectively, derived almost all the 1949 gold production from bucket-line dredging.

The principal gold producers in California in 1949, listed by operators in order of output were: The Natomas Co., Sacramento County (dredge), Idaho-Maryland Mines Corp., Nevada County (gold ore), and Yuba Consolidated Gold Fields (Yuba Unit), Yuba County (dredge).

Production of silver from California ores, gravel, and re-treated tailings in 1949 was 783,880 fine ounces valued at $709,451 compared with 724,771 fine ounces valued at $655,954 in 1948. Of the lode silver, 40 percent was derived from lead ore, 35 percent from zinc-lead ore, 11 percent from zinc ore, more than 7 percent from gold ore, 4 percent from copper ore, 2 percent from gold-silver ore, and nearly 1 percent from silver ore and lead-copper ore, together. A small quantity of silver was recovered as a byproduct of dredging and other placer methods carried on principally for gold. Smelting of concentrates supplied 54 percent of the lode silver recovered in the State, smelting of ore and old tailings nearly 38 percent, cyanidation of ore, concentrates, and old tailings 6 percent, and amalgamation of ore and old tailings more than 2 percent.

The principal silver producers in California in 1949, listed by operators in order of output were: Anaconda Copper Mining Co. (Darwin group), Inyo County (zinc-lead ore and lead ore), Anaconda Copper Mining Co. (Shoshone group), Inyo County (lead ore), and Coronado Copper & Zinc Co., Shasta County (zinc ore).

COLORADO

The mine output of gold in Colorado in 1949 was 102,618 fine ounces valued at $3,591,630—a 34-percent decrease from the 154,802 ounces valued at $5,418,070 produced in 1948, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. The principal factor in the decrease was the shutdown in February 1949 of virtually all mining operations in the famous Cripple Creek district to await completion of a new custom mill being built there to replace the Golden Cycle mill at Colorado Springs as a market for Cripple Creek ore. This district produced 35 percent of the State total gold in 1948 and 1947 and an average of 39 percent for the 20 years from 1929 through 1948. Other straight gold districts either remained inactive or had a low production, and gold output decreased in most of the principal districts producing gold along with silver and base metals.

The leading gold-producing districts in 1949, in order of rank, were Upper San Miguel, California (Leadville) (including Box Creek), Cripple Creek, Animas, and Fairplay; these five districts produced 84 percent of the State total gold output. Dry gold and silver ores yielded 52,616 ounces of gold (51 percent of the State total); zinc, lead, copper, and mixed base-metal ores together yielded 36,859 ounces (36 percent), and placers 13,143 ounces (13 percent). The principal gold-producing properties, in order of output, were: Smuggler Union group (Telluride Mines) and Treasury Tunnel-Black Bear (Idarado), both in San Miguel County; Resurrection, Lake County; Shenandoah-Dives group, San Juan County; and South Platte Dredging Co. dredge, Park County.

The State silver production decreased 4 percent from 1948 and amounted to about half the annual average for the 10-year prewar period 1932–41. The quantity produced was 2,894,886 fine ounces valued at $2,620,018 compared with 3,011,011 ounces valued at $2,725,117 in 1948. The tonnage of silver-bearing copper, lead, and zinc ores mined (755,481 tons, including the mixed base-metal ores) was nearly the same as in 1948, but the average yield of recoverable silver per ton of ore (2.27 ounces) decreased slightly. The base-metal ores together yielded 59 percent of the State total output of silver. The gold ore of the Cripple Creek district carries very little silver, and the shutdown of the Cripple Creek mines had little effect on the production of silver. The total quantity of dry gold and silver ores mined in other districts (483,657 tons) was 6 percent larger than in 1948, but the average yield of recoverable silver per ton of ore (2.43 ounces) decreased 8 percent.

The larger silver-producing districts in 1949 were Upper San Miguel, Animas, Creede (Mineral County), Ten Mile (Kokomo, Summit County), and California (Leadville). The principal silver-producing properties, in order of output, were: Treasury Tunnel-Black Bear (Idarado) group, Shenandoah-Dives group, Emperius Mining Co. group (Mineral County), American Smelting & Refining Co. Kokomo unit (Victory group), and Eagle mine (Eagle County).

Ore treated by mills in Colorado in 1949 totaled 1,238,651 tons, from which were recovered 33,208 ounces of gold and 12,272 ounces of silver in bullion shipped direct to the mint and 51,332 ounces of gold and 2,603,913 ounces of silver in concentrates shipped to smelters. Ore shipped direct to smelters totaled 23,704 tons containing 4,935

ounces of recoverable gold and 275,900 ounces of silver. The total value of the gold, silver, copper, lead, and zinc recovered from the 1,262,355 tons of ore sold or treated in Colorado in 1949 was $27,474,322, of which $6,211,648 represented the combined value of the gold and silver and $21,262,674 that of the copper, lead, and zinc. Placer mines produced 13,143 ounces of gold valued at $460,005 and 2,801 ounces of silver valued at $2,535.

The total production of recovered gold and silver in Colorado from 1858 through 1949 has been 39,483,642 fine ounces of gold valued at $875,804,434 and 738,890,228 fine ounces of silver valued at $575,229,936.

IDAHO

The output of recoverable gold in Idaho increased from 58,454 fine ounces valued at $2,045,890 in 1948 to 77,829 fine ounces valued at $2,724,015 in 1949 (a 33-percent gain); but the silver output declined from 11,448,875 fine ounces valued at $10,361,810 to 10,049,257 fine ounces valued at $9,095,085 (a 12-percent loss), according to C. E. Needham and Paul Luff, of the United States Department of the Interior, Bureau of Mines.

The yield of gold from lode mines rose from 37,678 ounces in 1948 to 62,751 ounces in 1949, but that from placer properties decreased from 20,776 ounces to 15,078 ounces. The gain from lode properties resulted principally from the treatment of ore, containing a higher gold content, from the Yellow Pine mine at Stibnite. Of the State total gold in 1949, 74 percent came from gold ore, 13 percent from bucket-line dredging, 6 percent from dragline dredging, and 6 percent from zinc-lead ore. Four bucket-line dredges and 7 dragline dredges treated about 3,000,000 cubic yards of gravel in 1949 and recovered 14,707 fine ounces of gold and 4,334 fine ounces of silver.

About 69 percent of Idaho's gold in 1949 came from a lode mine in the Yellow Pine district in Valley County. The remainder came largely from dredging operations in the Elk City district, Idaho County; Boise Basin district, Boise County; and Yankee Fork district, Custer County; and from lode operations in the Middle Boise (Atlanta) district, Elmore County; Warm Springs (Ketchum) district, Blaine County; and Coeur d'Alene region, Shoshone County. The Bradley Mining Co., operating the Yellow Pine mine at Stibnite, continued to be by far the leading State gold producer, and its output in 1949 was nearly double that in 1948. It was followed by Warren Dredging Corp. (bucket dredge) at Elk City, Idaho-Canadian Dredging Co. (bucket dredge) at Idaho City, Talache Mines, Inc. (lode) at Atlanta, Jordan Placers, Inc. (dragline dredge) near Sunbeam, and Triumph lode mine at Triumph. Gold recovered from ore amalgamated amounted to 1,214 ounces; from concentrates smelted, 60,704 ounces; and from crude or smelted, 833 ounces.

The total production of gold in Idaho, in terms of recovered metal, from 1863 through 1949 has been 8,042,014 ounces valued at $184,609,893.

Idaho's output of recoverable silver decreased to 10,049,257 fine ounces in 1949, 1,399,618 ounces less than that in 1948. This loss resulted mainly from curtailment of operations during the last half of the year at zinc-lead-silver mines caused by declines in the prices of lead and zinc and from a strike at the Bunker Hill lead smelter at

Bradley from August 20 to November 14. However, the State remained the largest producer of silver in the United States—a place it has held since 1933. Of the State total silver, silver ore yielded 42 percent, zinc-lead ore and old tailings 42 percent, lead ore 15 percent, and gold ore most of the remainder. The recovery of silver from silver ore decreased from 5,735,954 ounces in 1948 to 4,250,576 ounces in 1949 (26 percent), that from zinc-lead ore from 4,490,618 ounces to 4,190,996 ounces (7 percent), but that from silver-lead ore increased from 939,500 ounces to 1,475,017 ounces (57 percent).

The Coeur d'Alene region produced 9,146,146 fine ounces of silver in 1949 or 91 percent of the State total silver; the remainder came largely from the Warm Springs, Yellow Pine, and Bayhorse districts.

Twelve mines—the Sunshine, Bunker Hill & Sullivan, Polaris, Page, Silver Dollar, Triumph, Sherman, Silver Syndicate, Silver Summit, Lucky Friday, Star, and Morning—produced 83 percent of the State silver in 1949. Six properties near Kellogg, operated by the Sunshine Mining Co., produced 4,742,708 ounces of silver in 1949, or 47 percent of the State total.

The total production of silver in Idaho, in terms of recovered metal, from 1863 through 1949 has been 552,329,323 ounces valued at $387,851,818.

MISSOURI

No gold output has been reported in Missouri since the annual canvass of mines began in 1907, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. The production of recoverable silver in 1949—all derived from lead and lead-copper ores—totaled 123,413 fine ounces valued at $111,695 compared with 114,187 ounces valued at $103,345 in 1948.

Nearly all the silver output was recovered as a byproduct by smelters treating lead concentrates produced in mills in southeastern Missouri. The concentrates usually contain 1 to 2 ounces of silver a ton, but a large part of the bullion obtained from the concentrates is not desilverized, and in the sale of the concentrates no value is attached to the silver. In 1949 and other recent years some silver was recovered from copper concentrate made in milling lead-copper-cobalt-nickel-iron ore from the Madison mine, also in southeastern Missouri. The St. Joseph Lead Co. continued to be the only substantial producer of silver in Missouri.

MONTANA

Montana lodes in 1949 yielded 42,903 fine ounces of gold, and placers 9,821 fine ounces—a total of 52,724 ounces valued at $1,845,340—according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines. Compared with 1948, this represents a decrease of 24 percent from lodes and 41 percent from placers, or an over-all drop of nearly 28 percent. Declines were general at both lodes and placers, and among the State's larger gold-producing properties, only the Estelle-New Year's Gift group and the Cornucopia mine reported larger gold yields in 1949 than in 1948.

Of Montana's total gold in 1949, 49 percent was derived from gold and silver ores (40 percent in 1948), 32 percent from base-metal ores (37 percent in 1948), and 19 percent from placers (23 percent in 1948).

Ores milled yielded 60 percent of the total gold, and ores shipped to smelters nearly 22 percent.

Gold producers in Montana, each with an output of 1,800 ounces or more in 1949, were the property of the Anaconda Copper Mining Co. (copper ore and waste materials and zinc-lead ore and dumps) at Butte, Estelle-New Year's Gift group (gold ore) in Park County, Porter Bros. (placer) at Helena, Drumlummon mine (gold ore) at Marysville, Cornucopia mine (gold-silver ore) near Virginia City, Ruby mine (gold ore) in Phillips County, H. & H. Mines (placer) in Granite County, and Golden Sunlight mine (gold ore) near Whitehall. From these eight properties came 77 percent of the total gold.

The total production of gold in Montana, in terms of recovered metal from 1862 through 1949, has been 17,268,060 ounces valued at $388,835,312.

The output of recoverable silver in Montana in 1949 was 6,327,025 fine ounces valued at $5,726,277, which represents a decrease of 9 percent in quantity and value from the 1948 yield of 6,930,716 ounces valued at $6,272,648. This decline was attributable mainly to a 7-percent drop in output of the metal from the operations of the Anaconda Copper Mining Co. at Butte.

Zinc-lead ore supplied 62 percent of the State silver in 1949, copper ore 29, gold and silver ores 7, and lead and zinc ores together 2 percent. Ores milled yielded 91 percent of the total silver, and smelting ores almost 9 percent; minor sources were placers and old zinc slag fumed.

The Ananconda Copper Mining Co. supplied 83 percent of the State silver in 1949, followed by the Emma mine at Butte and the Mike Horse mine at Flesher. These three contributed 89 percent of the total silver.

The total production of silver in Montana, in terms of recovered metal, from 1862 through 1949, has been 768,733,754 ounces valued at $564,800,179.

NEVADA

Increased output in 1949 from rehabilitated gold mines, notably in Esmeralda, Humboldt, and Storey Counties, was largely responsible for the 17-percent increase in Nevada gold production over 1948, according to R. B. Maurer, of the United States Department of the Interior, Bureau of Mines. Production of silver increased 1 percent compared with 1948 due to the greater yield of silver from base-metal ores and dry and siliceous gold ores which more than compensated for the lower yield of the metal from dry and siliceous gold-silver and silver ores. Base-metal ores accounted for 57 percent of the silver recovered in 1949.

The output of gold from Nevada ores, old tailings and gravels in 1949 was 130,399 fine ounces valued at $4,563,965, compared with 111,532 fine ounces valued at $3,903,620 in 1948. Production of silver in 1949 was 1,800,209 fine ounces valued at $1,629,280, compared with 1,790,020 fine ounces valued at $1,620,058 in 1948.

Gold was recovered from the following sources: Gold ore, 54 percent; copper ore, 29 percent; placer gravel, 6 percent; gold-silver ore, 5 percent; zinc-lead ore, 4 percent; silver ore, 1 percent; and all other ores, 1 percent. Metallurgical data show that more than 51 percent of the State lode gold was recovered by cyaniding ore and old tailings, 43 percent by smelting concentrates, 3 percent by the direct smelting

of ore and old tailings, and nearly 3 percent by amalgamation of ore and old tailings.

The principal Nevada gold mines in 1949, listed by operating companies and in order of output were: Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); Getchell Mines, Inc., Humboldt County (gold ore); London Extension Mining Co., Lander County (gold ore); Consolidated Coppermines Corp., White Pine County (copper ore); Consolidated Chollar, Gould and Savage Mining Co., Storey County (gold ore); Goldfield Deep Mines Co. of Nevada, Esmeralda County (gold ore); Combined Metals Reduction Co., Lincoln County (zinc-lead ore); Natomas Co. (bucket-line dredge); Dayton Consolidated Mines Co., Storey County (gold ore); and Summit King Mines, Ltd., Churchill County (gold-silver ore).

Nevada lode silver was recovered from the following sources in 1949: Zinc-lead ore, 33 percent; silver ore, 17 percent; gold-silver ore, 14 percent; lead ore, 14 percent; gold ore, 11 percent; copper ore, 7 percent; zinc ore, 3 percent; and all other ores nearly 1 percent. Placer gravels washed principally for gold yielded a small quantity of silver. The smelting of concentrates accounted for 53 percent of the lode silver produced in Nevada in 1949, 24 percent was recovered by cyaniding ore and old tailings and nearly 23 percent came from the direct smelting of ore and old tailings. A negligible quantity of silver was recovered by amalgamation of ore and old tailings.

The principal silver mines in Nevada in 1949, listed by operating companies and in order of output were: Combined Metals Reduction Co., Lincoln County (zinc-lead ore); Copper Canyon Mining Co., Lander County (silver ore); Summit King Mines, Ltd., Churchill County (gold-silver ore); Consolidated Chollar, Gould and Savage Mining Co., Storey County (gold ore); Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); Prince Consolidated Mining Co., Lincoln County (zinc-lead and silver ores); Bristol Silver Mines Co., Lincoln County (lead and copper ores); Central Comstock Mines Corp., Storey County (gold-silver tailings); McFarland & Hullinger, Elko County (lead ore); and Ely Valley Mines, Inc., Lincoln County (zinc ore).

NEW MEXICO

There was little activity in straight gold and silver mining in New Mexico in 1949, and the quantity of gold and silver recovered incidentally in the production of copper, lead, and zinc was less than in 1948, according to A. J. Martin, of the United States Department of the Interior, Bureau of Mines. In the Mogollon district, Catron County, an important producer of gold-silver ore before the wartime restrictions on gold mining caused the mines to close in 1942, repair work was done at the Lehigh Metals Co. Consolidated group of mines late in 1949, and small-scale mining began in January 1950.

The State output of recovered gold in 1949 totaled 3,249 fine ounces valued at $113,715 and silver 380,855 fine ounces valued at $344,693. Comparable figures for 1948 were 3,414 ounces of gold valued at $119,490 and 537,674 ounces of silver valued at $486,622.

The gold output in 1949 comprised 1,981 ounces from the Lordsburg district, Hidalgo County; 869 ounces from the Central district and 101

ounces from the Steeple Rock district, Grant County; and a total of 298 ounces from various districts in Catron, Grant, Hidalgo, Lincoln, Santa Fe, Sierra, and Socorro Counties. Copper ore yielded 2,304 ounces of gold; lead, zinc, and zinc-lead ores 651 ounces; dry gold and silver ores 263 ounces; and placer gravel 31 ounces. The only New Mexico producer of more than 1,000 ounces of gold was the Atwood copper mine in the Lordsburg district.

The principal silver-producing districts were Lordsburg, 149,312 ounces; Central, 136,483 ounces; Magdalena, 33,618 ounces; Eureka, 19,493 ounces; and Lone Mountain, 13,356 ounces. Twenty-one other scattered districts together produced 28,593 ounces of silver. Copper ore yielded nearly 41 percent of the State total silver output, zinc ore, 37 percent; lead and zinc-lead ores, 15 percent; and gold and silver ores and placer gravel more than 7 percent. The leading producers of silver were the Atwood copper mine, Hidalgo County; the Ground Hog zinc-lead mine in Grant County, and the Bonney-Miser's Chest (Banner) copper mine in Hidalgo County. Of the 6,539,602 tons of ores of gold, silver, copper, lead, and zinc mined in New Mexico in 1949, only 5,364 tons were dry gold and silver ores; copper ore amounted to 6,105,174 tons, zinc ore 363,322 tons, and lead and zinc-lead ores 65,742 tons. Gold and silver together represented less than 2 percent of the total value of the metals recovered from the ores.

The total production of gold and silver in New Mexico, in terms of recovered metals, from 1848 through 1949 has been 2,192,644 fine ounces of gold valued at $50,076,733 and 69,189,093 fine ounces of silver valued at $54,243,342.

OREGON

Oregon gold production in 1949, owing principally to expansion in dredging, exceeded the 1948 output by 11 percent, but was considerably below the postwar peak of 18,979 ounces attained in 1947 according to R. B. Maurer, of the United States Department of the Interior, Bureau of Mines. Silver production fell 10 percent below the relatively small yield of the metal in 1948.

The production of gold from Oregon ores and gravels was 16,226 fine ounces (including the fine gold content of "natural gold" sold on the open market) valued at $567,910 in 1949 compared with 14,611 fine ounces valued at $511,385 in 1948. Placer mines contributed 89 percent of the gold, and 74 percent of the placer gold was recovered by bucket-line dredges, 22 percent by dragline dredges, 2 percent by hydraulicking and 2 percent by other methods. Lode mines produced 11 percent of the total gold and 99 percent of the lode gold was derived from dry and siliceous gold ore and old tailings and 1 percent was from siliceous silver ore and copper ore. Metallurgical data show that ultimate recovery of nearly 47 percent of the total lode gold was from smelting of concentrates, nearly 38 percent from the smelting of ore, 15 percent was as bullion from amalgamation of ore and less than 1 percent from cyanidation of ore. The leading Oregon gold producers in 1949 in the order named were the Baker Dredging Co., Sumpter district, Baker County and Porter & Co., Granite district, Grant County (bucket-line dredges), and Calhoun & Howell of Oregon, Ltd., North Fork district, Grant County (dragline dredge).

Oregon ores and gravels in 1949 yielded 12,195 ounces of silver valued at $11,037 compared with 13,596 ounces valued at $12,305

in 1948, a decrease of 10 percent in both quantity and value. More than 99 percent of the State total came from Grant, Lane, and Baker Counties, principally the yield from lode mines; dry and siliceous gold ore was the principal source of lode silver and smelting of concentrates the principal method of recovery.

STATES EAST OF THE MISSISSIPPI RIVER

In 1949 the reported production of gold from mines in the States east of the Mississippi River was 1,967 fine ounces valued at $68,845 and silver, 101,612 fine ounces valued at $91,964, according to Samuel A. Gustavson of the United States Department of the Interior, Bureau of Mines. Production and value of gold and silver produced in 1948 were, respectively, 2,479 fine ounces valued at $86,765 and 101,171 fine ounces valued at $91,565. The prices per ounce used to calculate value for both 1949 and 1948 were $35 for gold and $0.9050505 for silver.

Gold was produced chiefly as a byproduct in the course of mining for magnetite-pyrite-chalcopyrite ore from the Cornwall mine, Lebanon County, Pa.; copper ore from the Elizabeth mine, Orange County, Vt.; and copper-iron-zinc ore from the Tennessee Copper Co. mines, Polk County, Tenn. Production in 1949 from these States was: Pennsylvania, 1,645 ounces; Tennessee, 171 ounces; and Vermont, 120 fine ounces. A total of 4 ounces of gold was reported from two lode gold mines and a total of 27 ounces of gold was reported from two placer mines, one of each in Georgia and North Carolina. In 1948 one lode gold mine in Georgia reported production of 19 ounces, whereas no placer output was reported.

There was little change from 1948 in the output of silver from mines in States east of the Mississippi River. Production was 101,612 fine ounces valued at $91,964 in 1949 and 101,171 ounces valued at $91,565 in 1948. All the silver was recovered as a byproduct from copper, lead, or zinc-lead ores from mines in Illinois, 3,128 ounces; New York, 18,378 ounces; Pennsylvania, 10,827 ounces; Tennessee, 41,833 ounces; and Vermont, 27,446 ounces.

SOUTH DAKOTA

Production of gold in South Dakota rose 23 percent in 1949 over 1948 and was the highest since 1942, according to A. J. Martin, of the United States Department of the Interior, Bureau of Mines. Production from the Homestake mine at Lead, Lawrence County, largest gold-producing mine in the United States, reached the highest rate of the postwar period in the last half of 1949. Since the mine resumed operations after the wartime shutdown it has not operated a full year at normal productive capacity because of the limited number of men available for underground work. The company reported that the full number of men required for the mine department was nearly reached in mid-November 1949. Output from the Bald Mountain mine at Trojan, an important gold producer, was a little higher than in 1948. There were no other regularly operating gold mines in the State in 1949. A little gold and silver, including 1 ounce of placer gold, was recovered by small-scale intermittent operators in Lawrence County. Silver is recovered as a byproduct of gold mining.

The total South Dakota output of gold in 1949 was 464,650 fine ounces valued at $16,262,750 and silver 109,383 fine ounces valued at $98,997. In 1948 the output of gold was 377,850 ounces valued at $13,224,750 and silver 94,693 ounces valued at $85,702.

Ore mined at the Homestake mine in 1949 was 1,112,183 tons compared with 896,862 tons in 1948. The mine is opened by three vertical shafts, the deepest being 4,245 feet, with an inside winze to the 5,000-foot level. The primary crushing plants are at the hoists. Other surface plants include the 180-stamp South mill (the main secondary crushing, grinding, and amalgamating plant), two cyanide plants, a slime plant, and refinery. At the refinery silver is parted from the gold, and virtually pure metals are shipped to the Denver mint. Bullion with a value of $15,683,159 was produced in 1949, which is $3,025,021 more than in 1948. Dividends paid in 1949 amounted to $4,520,880. From 1876 through 1949 the mine yielded bullion and concentrates that brought a net return of $494,113,151 and paid $165,176,794 in dividends.

Output of ore from the Bald Mountain Mining Co. group at Trojan in 1949 was 117,759 tons yielding 17,544 fine ounces of recovered gold and 25,612 fine ounces of silver; the net return to the mine on bullion sold during the year (including a small quantity of refinery slag) was $633,445. The ore-treatment process includes crushing to five-eighth-inch size, ball milling in cyanide solution, thickening and agitation, countercurrent washing in four stages, Merrill-Crowe zinc-dust precipitation, and reduction of precipitate in a gas-fired reverberatory-type tilting furnace.

The total production of gold and silver, in terms of recovered metals, in South Dakota from 1876 through 1949 has been 22,295,995 fine ounces of gold valued at $561,957,034 and 10,003,769 fine ounces of silver valued at $7,185,831.

TEXAS

Four small mines in Texas produced ores yielding recoverable gold or silver or both metals in 1949, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. The total output of gold was 40 fine ounces valued at $1,400 and silver 2,691 fine ounces valued at $2,435. Comparable figures for 1948 were 57 ounces of gold valued at $1,995 and 3,065 ounces of silver valued at $2,774. The gold and silver produced in both years were recovered from copper and lead ores. The producing mines in 1949 were the Mary Ellen 25 miles north of Van Horn, Culberson County; the Sancho Panza near Allamoore, Hudspeth County; and The R. I. Carr leased properties west of Shafter, and the Silver Dome group northwest of Presidio, both in Presidio County.

The total Texas production of gold and silver, in terms of recovered metals, from 1885 through 1949 has been 8,432 fine ounces of gold valued at $229,065 and 33,294,666 fine ounces of silver valued at $23,438,865. The Presidio mine at Shafter, which produced most of the State output of silver in the past, was idle in 1949.

UTAH

The mine production of gold in Utah in 1949 was 314,058 fine ounces (314,046 ounces from lodes and 12 ounces from placers) valued

at $10,992,030, according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines. This represents a decline of 15 percent in quantity and value from the 1948 output of 368,422 ounces valued at $12,894,770. Of the larger gold-producing properties in Utah in 1949, only the property of the Park Utah Consolidated Mines Co. in the Park City region reported a gain over 1948 output. Loss was especially large at the Utah Copper mine in Bingham Canyon, owing to a work stoppage which began in October 1948 and continued until February 1949.

Of the total gold in 1949, 85 percent came from copper ore, 12 from zinc-lead ore, 0.3 from other base-metal ores, and nearly 3 percent from gold and silver ores. Two placers reported production. The West Mountain (Bingham) district supplied 91 percent of the total gold, the Park City region 6, and the Tintic district nearly 2 percent. Output of the metal in the West Mountain (Bingham) district was 14 percent below that in 1948, and in the Tintic district 53 percent, but in the Park City region it rose 2 percent.

The leading gold producers in Utah in 1949, each with an output of more than 1,000 ounces of recoverable metal, were as follows: Utah Copper mine and United States & Lark group, both in the West Mountain (Bingham) district; the properties of the New Park Mining Co. and Park Utah Consolidated Mines Co., both in the Park City region; Eureka Lilly mine and the Chief Consolidated Mining Co. property, both in the Tintic district; Butterfield property in the West Mountain (Bingham) district; and the Calumet mine in the Rush Valley district. These eight properties furnished 98 percent of the State gold.

The total production of gold in Utah, in terms of recovered metal, from 1864 through 1949, has been 11,747,120 ounces valued at $311,374,240.

The mine output of silver in Utah in 1949 was 6,724,880 fine ounces valued at $6,086,356—a decrease of 17 percent in quantity and value from the 8,045,329 ounces valued at $7,281,429 in 1948. With the exception of the Butterfield property in the West Mountain (Bingham) district and the Daly No. 1 dump at Park City, all of the larger silver producers in Utah reported lower yields in 1949 than in 1948. Decreases were especially large at the Utah Copper mine and at the properties of the Park Utah Consolidated Mines Co. and Silver King Coalition Mines Co., both at Park City. Output of the metal dropped 8 percent in the West Mountain (Bingham) district, 38 in the Park City region, and 19 in the Tintic district.

Zinc-lead ore, zinc ore, lead ore, and zinc-lead-copper ore together furnished almost 57 percent of the State silver in 1949; copper ore, 33 percent; and gold and silver ores, 10 percent; the remainder came principally from zinc slag fumed.

Utah properties that produced more than 100,000 ounces of recoverable silver each in 1949 were as follows: Utah Copper mine; United States & Lark group, properties of Chief Consolidated Mining Co. and New Park Mining Co.; Butterfield group; Park Utah Consolidated Mines Co. property; Daly No. 1 dump; Calumet mine; and Silver King Coalition Mines Co. property. These mine producers contributed 92 percent of the State silver.

The total production of silver in Utah, in terms of recovered metal, from 1864 through 1949, has been 741,722,760 ounces valued at $544,494,476.

WASHINGTON

The mine output of gold in Washington in 1949 was 71,994 fine ounces valued at $2,519,790, according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines. Lode output was 71,984 ounces and came from 29 properties; placer output was 10 ounces and came from 3 properties.

The State gold yield in 1949 was 3 percent greater than the yield of 70,075 ounces valued at $2,452,625 in 1948. This increase of 1,919 ounces resulted mainly from substantial shipments of gold ore during the second half of the year from the Gold King mine near Wenatchee. The Holden mine, in Chelan County, was the State's leading gold producer, followed in order by the Knob Hill mine in Ferry County, the Gold King mine in Chelan County, and the Aurum group in Ferry County. The above four properties contributed all but a small quantity of the State gold in 1949. Yield of the metal increased slightly at the Holden mine but declined at the Knob Hill mine and the Aurum group. Of the State gold in 1949, almost 60 percent was recovered from zinc-copper ore, and most of the remainder from gold ore.

The total production of gold in Washington, in terms of recovered metal, from 1860 through 1949, has been 2,355,704 ounces valued at $61,204,963.

The mine output of silver in Washington in 1949 was 357,853 fine ounces valued at $323,875, a decrease of 5 percent in quantity and value from the 375,831 ounces valued at $340,146 in 1948. Among the four leading State silver producers in 1949, only the Bonanza mine in Stevens County reported an increase. The Knob Hill mine (gold ore) remained in first place by a slight margin, followed by the Holden mine (zinc-copper ore), the Bonanza mine (lead ore), and the Aurum group (gold ore). These four furnished 89 percent of the State silver. Gold ore supplied 44 percent of the State silver in 1949, followed by zinc-copper ore with about 37 percent; most of the remainder came from lead and zinc-lead ores.

The total production of silver in Washington, in terms of recovered metal, from 1860 through 1949, has been 13,857,293 ounces valued at $10,039,365.

WYOMING

Mines in Wyoming produced 389 fine ounces of gold valued at $13,615 and 21 fine ounces of silver valued at $19 in 1949, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. The production in 1948 was 115 ounces of gold valued at $4,025 and 11 ounces of silver valued at $10. Nearly all the output in both years came from the Carissa mine in the South Pass district, Fremont County. This mine had a substantial output in 1947 and was under development, with intermittent production in 1948 and 1949; it is equipped with a 100-ton amalgamation and cyanidation mill. A little gold was recovered from the St. Louis lode property and a small placer, both in the South Pass district. In Teton County 1 ounce of gold was recovered from the Sterling placer on Pacific Creek and 1 ounce from the Mercury claim near Moran.

The total production of gold and silver in Wyoming, in terms of recovered metals, from 1867 through 1949, has been 80,031 fine

ounces of gold valued at $1,909,413 and 74,819 fine ounces of silver valued at $51,912.

Distribution of gold and silver production of the United States, in fine ounces, for 1949, by sources of production (table furnished by the Bureau of Mines)

State	Gold			Silver		
	Lode mines	Placer mines		Dry and siliceous ores [1]	Lead ores [2]	Copper ores
		Floating bucket-line dredges	All other			
Alaska	8,327	156,020	65,069	32,317	3,739	
Arizona	108,428		565	328,358	2,230,019	2,412,359
California	166,683	226,838	23,710	96,943	658,495	28,442
Colorado	89,475	[3] 12,231	912	1,180,064	1,655,753	59,069
Georgia	1		17			
Idaho	62,751	10,234	4,844	4,365,038	5,683,665	554
Illinois					3,128	
Michigan						
Missouri					123,413	
Montana	42,903	7,758	2,063	435,913	4,045,329	1,845,783
Nevada	122,457	[4] 7,650	292	765,299	901,000	133,910
New Mexico	3,218		31	28,630	197,131	155,094
New York					18,378	
North Carolina	3		10			
Oregon	1,761	10,744	3,721	12,173		22
Pennsylvania	[5] 1,645					[5] 10,827
South Dakota	464,649		1	109,170	213	
Tennessee	171					41,833
Texas	40				2,610	81
Utah	314,046		12	663,160	3,828,012	2,233,708
Vermont	120					27,446
Washington	71,984		10	166,593	190,154	1,106
Wyoming	386		3	21		
Total	1,459,048	431,475	101,260	8,183,679	19,541,039	6,950,234

[1] Contains small quantity of silver from placer mines (61,368 fine ounces).
[2] Includes silver in lead, lead-copper, zinc, zinc-lead, zinc-copper, and zinc-lead-copper ores.
[3] Production by dragline dredges included with that by bucket-line dredges; Bureau of Mines not at liberty to publish separately.
[4] Production by nonfloating washing plants included with that by bucket-line dredge; Bureau of Mines not at liberty to publish separately.
[5] From copper concentrates from magnetitite-pyrite-chalcopyrite ores.

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

LIST OF TABLES IN THE ADDENDA

	Page
Number of gold and silver deposit transactions and assay determinations during the fiscal year 1950	40
Number of gold and silver deposit transactions and assay determinations during the calendar year 1949	40
Deposits and purchases of gold during the fiscal year 1950	42
Deposits and purchases of silver during the fiscal year 1950	44
Deposits and purchases of gold during the calendar year 1949	46
Deposits and purchases of silver during the calendar year 1949	48
Deposits of foreign gold bullion and coin during the fiscal year 1950	50
Deposits of foreign silver bullion and coin during the fiscal year 1950	50
Deposits of foreign gold bullion and coin during the calendar year 1949	51
Deposits of foreign silver bullion and coin during the calendar year 1949	51
Domestic coins, including assay pieces, withdrawn from monetary use during the fiscal year 1950	52
Domestic coins, including assay pieces, withdrawn from monetary use during the calendar year 1949	53
Standard silver dollars (uncurrent) melted for recoinage into subsidiary coin	54
Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin since 1883	54
Silver coin (including silver dollars) withdrawn from circulation for recoinage into subsidiary coin since 1890	54
Sales of Treasury silver under act of July 31, 1946, during fiscal years 1947–49	54
Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year 1936–50	55
Summary of newly mined domestic silver purchased by the Treasury, fiscal years 1934–50	56
Detailed receipts of the Bureau of the Mint for the fiscal year ended June 30, 1950	57
Cash assets and liabilities of the United States Mint Institutions on June 30, 1950	58
Cash assets and liabilities of the United States Mint Institutions on December 31, 1949	59
United States coinage during the calendar year 1949	61
United States coinage during the past 10 fiscal years, by denomination and number of pieces	62
United States coinage during the past 10 fiscal years, by denomination and face value	63
Authority for United States coinage, by class and denomination, with standard weight and fineness, and total coined	64
Estimated stock of coins in the United States on June 30, 1950	67
Minor coins outstanding on June 30, 1950	68
Estimated stock of coins in the United States on December 31, 1949	68
Coinage by the United States mints for other countries during the fiscal year 1949 (corrected table)	68
Coinage by the United States mints for other countries during the calendar year 1949	69
Summary of foreign coinage by United States mints, by year, through December 31, 1949	70

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations, prior to the fiscal year 1940, the receipt classification item of "Domestic refinery bullion" included that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that worked only old materials. Beginning with the fiscal year 1940 segregation of these items has been made in the tabulations.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial use and general disappearance; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such; any unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, considering only coins of the type commonly in circulation, the amounts coined, those withdrawn for recoinage, and general disappearance. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage

but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

Number of gold and silver deposit transactions and assay determinations during the fiscal year 1950

Item	Philadelphia	San Francisco	Denver	New York	Seattle	Total

Bronze, copper, and copper-zinc	do	1,284,016.65
Copper-silver-manganese alloy (not recoined)	do	103,544.07
Zinc-coated steel (not recoined)	do	1,648,328.77
		Value
Monetary value of metal obtained:		
Gold (at $35 per fine ounce)		$187,616.94
Silver (at $1.38+ per fine ounce):		
Uncurrent silver dollars		250,880.76
All other silver coin		2,201,210.96
Cupro-nickel		197,235.72
Bronze, copper, and copper-zinc		128,401.67
Gain by recoinage: Uncurrent silver dollars (net)		9,140.76
Total		2,974,486.81
Loss by recoinage:		
Silver (except uncurrent silver dollars)		166,931.81
Cupro-nickel		7,001.44
Bronze, copper, and copper-zinc		2,103.95
Total		176,037.20

Standard silver dollars (uncurrent) melted for recoinage into subsidiary coin [1]

Fiscal year	Face amount	Fiscal year	Face amount
1943	$8,080,739	1948	$361,789
1944	44,658,194	1949	241,740
1945	393,881	1950	273,501
1946	96,455		
1947	66,655	Total	54,172,954

[1] The act of Dec. 18, 1942, authorized all worn and uncurrent standard silver dollars held, or thereafter received in the Treasury, to be formed into bars and used for coinage.

Standard silver dollars (mutilated) purchased as bullion for use in the manufacture of subsidiary silver coin since 1883

Fiscal year	Face amount	Fiscal year	Face amount
1883-1929 [1]	$221,149	1941	$407

[1] Will not agree with figures in table, stock of (minor) coins in the United States. (See Bases Used for Mint Service Statistics.)
[2] See table, Authority for United States coinage, for weights and proportions of metals.
[3] Consists only of worn and mutilated coins unfit for circulation, returned to the mints and melted.
[4] Represents total coinage minus worn and mutilated coins returned to the mints and melted.
[5] There is no record of the earlier melting of copper half cents, but it is believed that few, if any, are now in circulation.

Estimated stock of coins in the United States on Dec. 31, 1949

Item	Silver coin	Minor coin	Total coin
Stock in the United States on Jan. 1, 1949	$1,470,479,576	$367,002,870	$1,837,482,446
Coinage executed calendar year 1949	18,650,806	9,695,275	28,346,081
Exports of United States coin calendar year 1949 (net) [1]	+29,259	+160,421	+189,680
Coin withdrawn from monetary use calendar year 1949	2,610,859	553,852	3,164,711
Coin used in industrial arts, general disappearance, etc., calendar year 1949 [2]	100,000	1,200	101,200
Stock in the United States on Dec. 31, 1949	1,486,448,782	376,303,514	1,862,752,296

[1] Partly estimated. [2] Estimated.

Coinage by the United States mints for other countries during the fiscal year 1949

[Corrected table: Coinage for Venezuela during fiscal year 1949 was executed at San Francisco instead of Denver]

Country and denomination	Composition	Gross weight per coin	Coinage by mint at—			
			Philadelphia	San Francisco	Denver	Total
		Grains	*Pieces*	*Pieces*	*Pieces*	*Pieces*
China: Dollar	880 silver, 120 copper	412	9,950,000		2,410,000	12,360,000

[1] For ratios from 1687–1836, see p. 91 of the 1944 Annual Report. Ratios shown above from 1837–1878 inclusive are from Pixley and Abell's tables. Ratios since 1878 are based upon the price of gold at $20.67+ per fine ounce until 1934 and at $35 per fine ounce thereafter; and upon the prices of silver as shown in the preceding table titled "Highest, lowest, and average price of silver per fine ounce in New York since 1874."

Summary of total United States exports and imports of gold and silver during the fiscal year 1950 [1]

Description	Gold		Silver	
	Exports	Imports	Exports	Imports
Ore and base bullion	$79,000	$33,197,384	----------	$24,612,022
Refined bullion	67,120,570	701,156,883	$846,350	37,845,462
United States coin	269	----------	507,655	1,785,356
Foreign coin	4,223,525	883	15,294,522	8,732,009
Total	71,423,364	734,355,150	16,648,527	72,974,849

WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are often incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries the most reliable data available are used in compiling world statistics.

Tables include the following:

1. Gold and silver monetary stocks of principal countries of the world at end of calendar year 1949.
2. Coinage of nations during the year ended December 31, 1949.
3. Mints of the world in operation during the year ended December 31, 1949.
4. Coins withdrawn from active circulation in various countries of the world during the year ended December 31, 1949.
5. Gold and silver in the form of old plate, jewelry, and other old material returned from use in the industrial arts by being deposited with the monetary authority in various countries of the world during the year ended December 31, 1949.
6. Estimated quantity of gold and silver used in the industrial arts in various countries of the world during the year ended December 31, 1949.
7. Characteristics of coins in circulation at end of December 1949.
8. World production of gold, 1944–49, by countries, in fine ounces (compiled by the Bureau of Mines, U. S. Department of Interior).
9. World production of silver, 1944–49, by countries, in fine ounces (compiled by the Bureau of Mines, U. S. Department of Interior).
10. Coinage of nations during the year ended December 31, 1948 (part).

912795—51——6

Gold and silver monetary stocks of principal countries of the world at end of calendar year 1949 (subject to revision)

[Gold reported on quantity basis, in troy ounces, grams, or kilograms and converted to United States money at rate of $35 per fine ounce (1 United States dollar is legally defined as 15 5/21 grains of gold 9/10 fine). Silver reported face amount converted to United States money at exchange rate, or reported quantity valued at New York average market rate for December 1949, $0.7325 per ounce 999/1000 fine]

Gold and silver monetary stocks of principal countries of the world at end of calendar year 1949 (subject to revision)—Continued

Country	Monetary unit	Exchange rate—average for December 1949 (New York rate if certified)	Gold bullion and coin held by Government agencies		Silver bullion and coin—U. S. dollar value			
			Number of fine troy ounces (000 omitted)	U. S. dollar value (000 omitted)	Bullion held by Government agencies (000 omitted)	Coin held by Government agencies (000 omitted)	Coin (estimated) in circulation including coin in commercial banks (000 omitted)	Total silver (000 omitted)
Other countries [15]			52,959	$1,853,357				
Bank for International Settlements			1,955	68,416				
International Monetary Fund			41,447	1,450,633				
Total [16]			1,001,531	35,053,414	$2,238,821	$585,074	$2,175,349	$4,999,244

[1] Approximate.
[2] January 1949.
[3] Includes holdings of commercial and development banks which are partly estimated.
[4] Amount in commercial banks. Amount in circulation not available.
[5] Includes United States silver subsidiary coin which also circulates.
[6] Data not available.
[7] March 1949.
[8] In addition, the Allied Occupation Forces held in custody 3,552,000 fine ounces of gold valued at $124,327,000, of which 1,075,000 fine ounces valued at $37,627,000 were earmarked for governments other than Japan (included in total).
[9] In addition, the Allied Occupation Forces held in custody 64,845,000 fine ounces of silver valued at $47,465,000 (included in total).
[10] Unrounded ounces, 285.
[11] Southern Rhodesia coins also circulate in Northern Rhodesia and Nyasaland.
[12] Gold holdings included under "Other countries."
[13] Includes cupro-nickel coins which were first minted during the latter part of 1946, and first issued on Jan. 2, 1947.
[14] Includes gold holdings of commercial banks.
[15] Includes gold holdings (partly estimated) for Argentina, Bulgaria, Czechoslovakia, Poland, Tangier, Rumania, United Kingdom, Yugoslavia, and gold not yet delivered by the Tripartite Commission for Restitution of Monetary Gold.
[16] No estimates included for countries not specified.

Coinage of nations during the year ended Dec. 31, 1949

[So far as reported to the Director of the United States Mint]

[See also tables "Characteristics of coins in circulation" for further description]

Country	Denomination	Number of pieces coined	Nominal value in monetary unit of issuing country		Composition
United States	Half dollar	13,514,612	6,757,306.00	dollars	900 silver, 100 copper.
	Quarter dollar	19,380,400	4,845,100.00	dollars	Do.
	Dime	70,484,000	7,048,400.00	dollars	Do.
	5 cents	106,866,000	5,343,300.00	dollars	75 copper, 25 nickel.
	1 cent	435,197,500	4,351,975.00	dollars	95 copper, 5 zinc and tin.

World total (estimate) [1]						

[1] Figures used derived in part from American Bureau of Metal Statistics. For some countries accurate figures are not possible to obtain owing to clandestine trade in gold. Data not available for Austria, Bulgaria, Germany, Norway, and Yugoslavia; estimate not included in total. In addition, production in Indonesia and Papua was negligible, and Thailand produced none in 1944–47.

[2] Refinery production. Excludes production of the Philippines.

[3] Data revised as recent information states the gold in zinc concentrates is not recoverable.

[4] Imports into United States.

[5] Exports.

[6] Estimate.

[7] Data not available, estimate included in total.

[8] Includes gold mined in Transylvania which temporarily formed part of Hungary.

[9] Output from U. S. S. R. in Asia included with U. S. S. R. in Europe.

[10] Lode only.

[11] Figure published by Director of the Mint, representing gold of Philippine origin refined but not necessarily mined during the year.

[12] Includes Ruanda-Urundi.

[13] Included is yield from Nkana mine refinery slimes accumulated during the war: 6,594 ounces in 1946, 547 in 1947, 999 in 1948, and 972 in 1949.

World production of silver, 1944–49, by countries, in fine ounces [1]

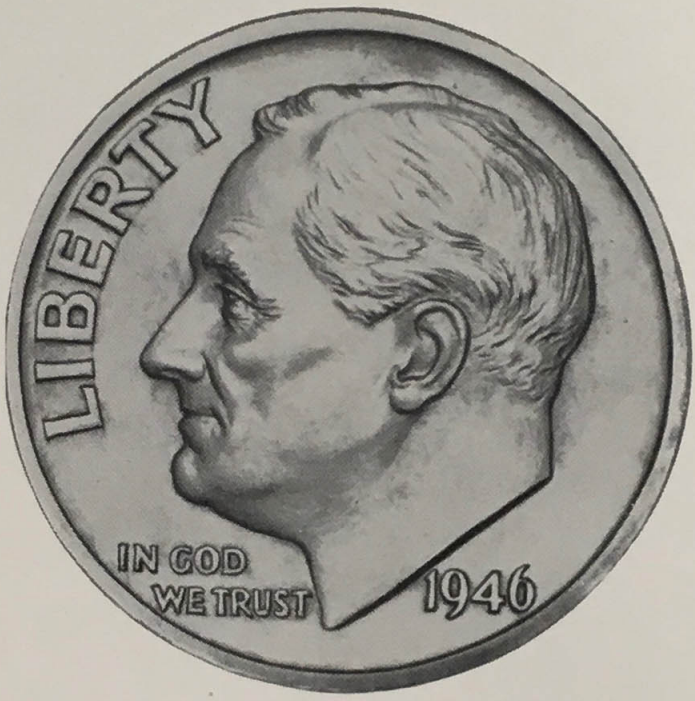
REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1946

OBVERSE



REVERSE

NEW DESIGN DIME, JANUARY 1946

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 26, 1946.

SIR: In compliance with the provisions of Section 3547 of the Revised Statutes of the United States, I have the honor to submit herewith a report covering the operations of the mints, assay offices, and bullion depositories of the United States for the fiscal year ended June 30, 1946, being the Seventy-fourth Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1945.

OPERATION OF THE MINTS, ASSAY OFFICES, AND BULLION DEPOSITORIES

Functions and Institutions of the Mint Service

The principal functions of the Mint Service consist of the manufacture of domestic coins; the safeguarding of the Government's holdings of the monetary metals, including coins in processing stages until finished and distributed to the Treasury or to the Federal Reserve Banks; and the acquisition of gold and silver bullion, payments for which are made on the basis of Mint assays. Other major activities include the refining of gold and silver; the manufacture of coins for foreign governments; and the production of medals and other decorations.

During the fiscal year 1946, seven field institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; Assay Offices at New York and Seattle; Gold Bullion Depository at Fort Knox; and Silver Bullion Depository at West Point. The Bureau of the Mint in Washington administers all Mint Service activities.

Coinage

Coinage production during the fiscal year 1946 amounted to a volume of 2.9 billion pieces, of which 1.7 billion pieces were United States coins and 1.2 billion were foreign coins. Details of production are given below.

Coinage for domestic use.—Domestic coins manufactured during the fiscal year 1946 totaled 1,658,127,100 pieces, compared with 2,646,134,101 pieces in 1945. Production for 1946 was as follows:

Domestic coinage executed, by Mints, during the fiscal year 1946

Denomination	Philadelphia	San Francisco	Denver	Total value	Total pieces
SILVER					
Half dollars	$4,275,000	$4,098,000	$2,911,800	$11,284,800	22,569,600
Quarter dollars	13,425,000	2,098,000	1,801,000	17,324,000	69,296,000
Dimes	16,691,000	4,247,000	5,758,350	26,696,350	266,963,500
Total silver	34,391,000	10,443,000	10,471,150	55,305,150	358,829,100
MINOR					
5-cent pieces	7,003,350	3,028,950	2,099,000	12,131,300	242,626,000
1-cent pieces	6,786,640	1,354,700	2,425,380	10,566,720	1,056,672,000
Total minor	13,789,990	4,383,650	4,524,380	22,698,020	1,299,298,000
Total domestic coinage	48,180,990	14,826,650	14,995,530	78,003,170	1,658,127,100

Minor coinage alloys.—The 5-cent piece coined through December 31, 1945, was composed of 56 percent copper, 35 percent silver and 9 percent manganese. Beginning January 1946, the former alloy of 75 percent copper and 25 percent nickel was resumed. The 1-cent coins produced throughout the year were composed of 95 percent copper and 5 percent zinc.

New design dime.—The new Roosevelt dime was released on January 30, 1946, the late President's birthday. The obverse bears a portrait of the late Franklin Delano Roosevelt, to left; LIBERTY, around border to left side; lower left field, IN GOD WE TRUST; lower right field, date, 1946. The reverse, vertically in center a torch signifying LIBERTY; and olive branch on left signifying PEACE; an oak branch on right signifying STRENGTH and INDEPENDENCE. Above around border, UNITED STATES OF AMERICA; below around border, ONE DIME; across lower field, E. PLURIBUS UNUM. A total of 143,507,500 of the new dimes were produced during the fiscal year. (See illustrations facing page 1.)

Coinage for foreign governments.—Production of silver and minor coins for foreign governments totaled 1,198,811,798 pieces during the fiscal year 1946, compared with 1,388,971,000 pieces in 1945. Production was as follows:

Coinage by the United States Mints for other countries, fiscal year 1946

Country and denomination	Composition	Number of pieces coined			
		Philadelphia	San Francisco	Denver	Total
Colombia:					
5 centavos	25 nickel-75 copper	13,423,000	1,800,000		15,223,000

5 centimos	do	12,000,000			12,000,000
					26,740,000
Total foreign coinage		834,703,000	193,598,798	170,510,000	1,198,811,798

Summary of coinage for other countries, fiscal year 1946

Country	Monetary unit	Number of pieces coined	Face value in monetary units of issuing country
Colombia	Peso	15,223,000	761,150
Cuba	do	39,883,000	635,450
El Salvador	Colon	5,000,000	50,000
Ethiopia	Dollar	10,000,000	500,000
Netherlands East Indies	Guilder	833,251,000	29,444,395
Philippines	Peso	256,714,798	31,202,658
Saudi Arabia[1]	Riyal	12,000,000	10,300,000
Venezuela	Bolivar	26,740,000	2,885,000
Total		1,198,811,798	

[1] In addition, the Philadelphia Mint made 60,780 gold disks 916 ⅔ fine for Saudi Arabia.

Mint issue of domestic coins

During the fiscal year 1946 the mints issued coins with a face value of approximately $105 million. Issues were as follows:

Denomination	Number of pieces	Face value
Silver dollars	15,888,605	$15,888,605.00
Half dollars	33,564,037	16,782,018.50
Quarter dollars	85,202,706	21,300,676.50
Dimes	255,532,899	25,553,289.90
5-cent pieces	203,061,000	10,153,050.00
1-cent pieces	1,529,497,500	15,294,975.00
Total	2,122,746,747	104,972,614.90

Stock of domestic coins in the United States.—The total stock of domestic coins in the United States aggregated an estimated $1.7 billion as of June 30, 1946. Kind of coin and location are as follows:

Kind of coin	Total stock	Held in Treasury	Held by Federal Reserve Banks and Agents	In circulation
Silver dollars	$493,580,003	$350,855,763	$2,405,374	$140,318,866
Subsidiary coin	878,958,125	13,320,052	22,516,260	843,121,813
Minor coin	325,977,935	3,907,511	5,076,046	316,994,378
Total coin	1,698,516,063	368,083,326	29,997,680	1,300,435,057

Medals

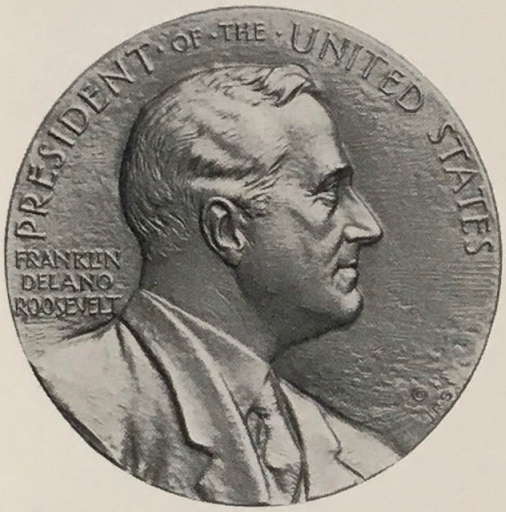
Production in the medal department of the Philadelphia Mint exceeded any previous year in the history of the Mint. Decorations for the armed forces totaling 1,205,125 pieces included 748,682 medals and 456,443 ribbon bars, lapel buttons, and other distinguishing devices. Medals included the Navy Cross, Silver Star, Distinguished Flying Cross, Navy and Marine Corps Medal, Air Medal, Purple Heart, and Bronze Star. In addition, 13,508 various commemorative medals with a value of $22,904 were sold to the public out of stock.

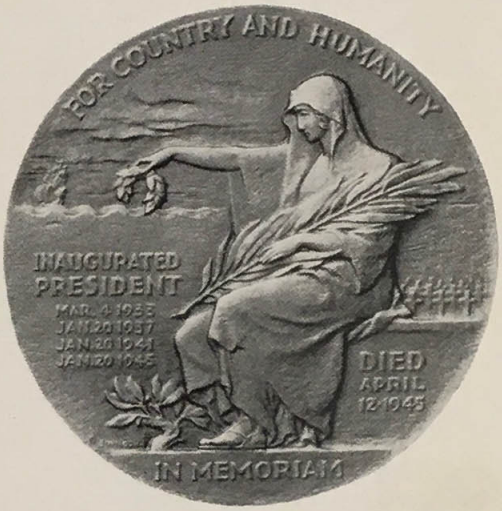
Gold and silver

Bullion deposit transactions.—Bullion deposit transactions during the fiscal year numbered 8,133, including 61 inter-mint transfers. Assay determinations required by the transactions numbered 19,626, including 632 determinations for the inter-mint transfers. In order to maintain uniformity in assay of bullion in the Mint Service all institutions use proof metal produced at one place; proof gold at the New York Assay Office, and proof silver at the Philadelphia Mint.

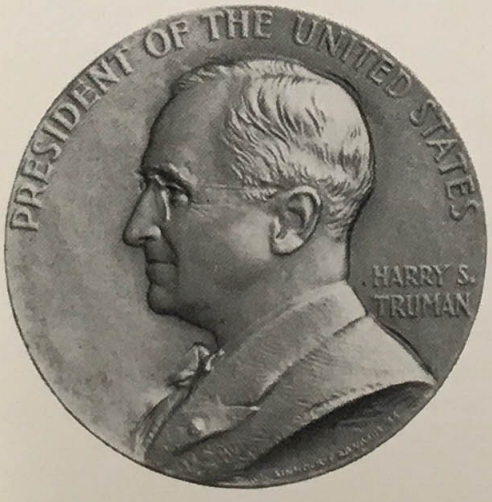
Long term storage of bullion.—No transfers of bullion to the depositories were made during 1946. There were withdrawals from storage, however, as follows: Gold withdrawn from Fort Knox amounting to 29,379,299 fine ounces, with a value of $1,028,275,480, was shipped to New York to meet the demand for industrial use, for earmarking

ROOSEVELT MEMORIAL MEDAL





TRUMAN PRESIDENTIAL MEDAL



purposes, and for export. Silver withdrawn from West Point for sales to industry under the Green Act, for lend-lease, and for coinage amounted to 105,128,971 fine ounces. On June 30, 1946, gold in storage at Fort Knox was valued at $12,483,415,360. Silver in storage at West Point amounted to 172,703,046 fine ounces.

Stock of gold and silver.—The total Treasury stock of gold bullion on June 30, 1946, was valued at $20,269,934,470. The Treasury stock of silver bullion on the same date aggregated 1,695,987,445 fine ounces.

Refineries.—During the fiscal year 1946 the refineries produced 2,946,191 fine ounces of gold and 3,354,506 fine ounces of silver by the electrolytic process. Output by each refinery was as follows:

Refinery	Electrolytic product	
	Gold	Silver
	Fine ounces	*Fine ounces*
San Francisco	657,856	967,989
Denver	1,407,659	845,937
New York	880,676	1,540,580
Total	2,946,191	3,354,506

Stocks of unrefined bullion.—Stocks of unrefined bullion on hand at the mint institutions on June 30, 1946, amounted to approximately 1,055 tons of gold and 594 tons of silver. Stocks at each institution were as follows:

Institution	Gold, fine ounces	Silver, fine ounces
Philadelphia	9,549	124,831
San Francisco	6,700,965	5,176,874
Denver	17,983,467	6,721,832
New York	6,055,257	5,295,741
Seattle	34,490	18,760
Total	30,783,728	17,338,038

Production and consumption of gold and silver in the United States during the calendar year 1945.[1]—Total gold production in 1945 amounted to 928,893 fine ounces with a monetary value of $32,511,255, compared with 1,022,238 fine ounces valued at $35,778,330 in 1944. Total silver production in 1945 amounted to 29,063,255 fine ounces compared with 35,651,049 fine ounces in 1944.

Consumption of gold by industry and the arts during 1945 was valued at $108,944,332 compared with $97,298,283 in 1944. Industrial consumption of silver during 1945 totaled 126,300,000 fine ounces compared with 120,100,000 fine ounces in 1944.

Gold operations.—Gold acquisitions, entered as classified melted receipts, amounted to $705,047,489 during the fiscal year 1946; receipts of domestic coin melted amounted to $281,074; and transfers between mint institutions amounted to $1,047,343,471. These transactions totaled $1,752,672,034 and included $3,194 of gold received

[1] See part II of the report for detailed tables on production and consumption.

at $20.67+ per fine ounce, the increment on which was $2,214. Details of deposits and purchases by number of ounces and by institution, are given in the addenda of this report.

Gold issue bars manufactured during the year numbered 107,337 and contained 23,222,780 fine ounces of gold with a value of $812,797,314. Details by institution were as follows:

Institution	Gold bars manufactured	
	Number	Fine ounces
Philadelphia	627	33,202
San Francisco	2,624	668,962
Denver	4,116	1,488,148
New York	99,970	21,032,468
Total	107,337	23,222,780

The mints at Philadelphia, San Francisco, and Denver and the New York Assay Office issued in exchange for cash, gold bars containing over 3.2 million fine ounces with a value of over $113 million during the fiscal year 1946, an increase of 73 percent over the preceding year. Monthly issues were as follows:

Month	Value of bars issued	Month	Value of bars issued
1945:		1946—Continued	
July	$2,331,569.10	March	$12,601,587.15
August	7,311,052.36	April	15,906,305.44
September	8,272,621.73	May	13,742,799.13
October	7,449,602.15	June	10,615,136.09
November	9,257,936.73		
December	7,385,134.70	Total fiscal 1946	113,097,557.25
1946:			
January	9,779,787.75	Total fiscal 1945	65,290,843.72
February	8,444,024.92		

Receipts and disbursements of gold bullion during the fiscal year 1946, and balances on hand June 30, 1946, as compared with June 30, 1945, are shown in the following table:

Institution	Balance on hand June 30, 1945	Receipts during fiscal year 1946 (details below) [1]	Total	Disbursements during fiscal year 1946 (details below) [1]	Balance on hand June 30, 1946 [2]
Philadelphia	$5,762,562.59	$8,829,881.88	$14,592,444.47	$10,954,562.53	$3,637,881.94

Silver operations.—Total silver receipts by the mints and assay offices during the fiscal year 1946 amounted to 44,891,463 fine ounces and were classified as follows:

Source or description	*Number of fine ounces received*
Newly mined domestic silver	1,306,290
Silver contained in gold deposits, etc	362,368
Silver received in exchange for Government-stamped bars	263,030
Uncurrent subsidiary coin for recoinage	1,182,377
Unfit standard silver dollars melted	72,140
Intermint transfers of silver	15,426,014
Deposits of silver in trust by foreign governments	26,279,244
Total receipts of silver	[1] 44,891,463

[1] Includes 128,287 fine ounces received for account of Reconstruction Finance Corporation, Office of Metals Reserve.

Details of purchases and deposits, by institution, are given in the addenda of this report.

The price paid for newly mined domestic silver during the fiscal year was $0.7111+ per fine ounce in accordance with the act of July 6, 1939. The price paid for silver contained in gold deposits and other miscellaneous silver from July–October 1945 was $0.44 per ounce. Such silver was purchased for account of the Office of Metals Reserve. During October the price was raised to $0.70 per ounce and the receipts were for account of the Treasury.

Silver issue bars manufactured during the year numbered 3,819 and contained 1,400,332 fine ounces of silver. Details by institution were as follows:

Institution	Silver bars manufactured	
	Number	Fine ounces
Philadelphia	377	35,116
San Francisco	1,843	76,830
New York [1]	1,599	1,288,386
Total	3,819	1,400,332

[1] In addition, the New York Assay Office manufactured coinage ingots containing 14,451,663 fine ounces of silver for use at the Philadelphia Mint.

Silver consumed in domestic coinage during the fiscal year 1946 amounted to 48,703,533 fine ounces, of which 40,006,363 ounces were used in subsidiary coinage, and 8,697,170 ounces in 5-cent coinage.

Mint sales of silver bullion under the Green Act from July 1 until December 31, 1945, when the act expired, totaled 58,440,839 fine ounces. Monthly sales were as follows:

Month, 1945	Fine ounces sold	Month, 1945	Fine ounces sold
July	5,828,323	November	10,049,021
August	4,702,322	December	28,352,200
September	3,274,992		
October	6,233,981	Total	58,440,839

Silver released to foreign governments under lend-lease procedure during the fiscal year totaled 76,542,583 fine ounces, of which 261,333 ounces went to Belgium; 26,000,000 ounces to Great Britain; 41,000,000 ounces to India; and 9,281,250 ounces to Saudi Arabia.

Treasury silver on lease to the Office of Defense Plants of the Reconstruction Finance Corporation, etc., amounted to 877,715,175 fine ounces at the close of the fiscal year.

During the fiscal year silver certificates in the amount of $388,803,232 were issued against 300,715,000 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. The difference between the cost of the silver and the monetary value was $248,298,454, and this amount constituted seigniorage.

Engraving Department activities

All coinage and medal dies used by the mints are produced by the engraving department of the Philadelphia Mint. During the fiscal year ended June 30, 1946, the engraving department produced 15,659 working dies for domestic coinage; 9,427 working dies for foreign coinage; numerous medal dies and several sculptured models, including models for foreign coins, a new design dime, and a Presidential medal. The designing, modeling, and production of dies is highly intricate work requiring the talents of skillful artists. All die work is under supervision of Mr. John R. Sinnock, engraver of the Philadelphia Mint. Mr. Sinnock personally designed and modeled the new Roosevelt dime, the Roosevelt Memorial Medal, and the Truman Presidential Medal, illustrations of which appear facing pages 1 and 4.

Operations of the melting and refining and of the coining departments, fiscal year 1946

The aggregate quantity of metals operated upon in the above-mentioned departments at the coinage mints, and assay office at New York, during the fiscal year ended June 30, 1946, was 27.9 million fine ounces of gold and 257.0 million fine ounces of silver. There were also operated upon at the coinage mints 1,055.9 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to the operative offices, as prescribed in section 355, title 31, United States Code, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—silver, 0.001.

Wastage of coinage metal and loss on sale of sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1946, was $137,772.47. A loss of $4,889.83 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the following table:

Item	Mint at—			Total
	Philadelphia	San Francisco	Denver	
Gold wastage: Melting and refining department	----------	$2,361.98	$61,461.65	$63,823.63
Silver wastage:				
Melting and refining department	$3,290.42	----------	----------	3,290.42
Coining department	1,862.12	11,309.23	8,557.21	21,728.56
5-cent alloy coinage wastage:				
Melting and refining department	13,424.01	2,759.39	837.86	17,021.26
Coining department	724.56	344.95	70.77	1,140.28
Nickel wastage:				
Melting and refining department	6,097.12	66.86	----------	6,163.98
Coining department	356.51	117.34	----------	473.85
Bronze wastage:				
Melting and refining department	20,321.76	399.81	1,846.94	22,568.51
Coining department	911.98	526.37	123.63	1,561.98
Loss on sales of sweeps	2,702.73	----------	2,187.10	4,889.83
Total wastage and loss	49,691.21	17,885.93	75,085.16	142,662.30
Reimbursements:				
Gold, departmental wastage offset by other departmental surpluses	----------	87.12	207.97	295.09
Silver, departmental wastage offset by other departmental surpluses	----------	11,309.23	8,557.21	19,866.44
5-cent alloy, nickel, and bronze wastage from minor coinage profits	25,206.90	4,214.72	2,879.20	32,300.82
Bronze and nickel wastage offset by charges to Foreign metals accounts	16,629.04	----------	----------	16,629.04
Other wastages, and loss on sweeps from appropriation	7,855.27	2,274.86	63,440.78	73,570.91
Total reimbursements	49,691.21	17,885.93	75,085.16	142,662.30

Appropriations, income and expenses

Regular appropriations available for the mint service during the fiscal year 1946 totaled $5,565,800, consisting of the following: Salaries and expenses, Office of Director of the Mint, $145,000; transportation of bullion and coin, $12,800; printing and binding, $8,000; and salaries and expenses, mints and assay offices, $5,400,000.

Supplemental appropriations under the joint resolution approved April 19, 1946, making additional appropriations for the fiscal year 1946 to pay increased compensation to officers and employees, authorized by legislation enacted during or applicable to that fiscal year were: Salaries and expenses, Office of the Director of the Mint, $23,000; and salaries and expenses, mints, and assay offices, $242,900.

The following is a statement of the income and expenses of the mint service for the fiscal year 1946, and the number of employees on June 30, 1946.

Institution	Gross income [1]	Gross expenses	Excess of income or expenses (—)	Number of employees on June 30, 1946
Philadelphia	$39,023,472	$7,034,695	$31,988,777	1,652
San Francisco	10,936,437	1,872,879	9,063,558	263
Denver	11,855,378	1,782,907	10,072,471	334
New York [2]	272,210,757	689,404	271,521,353	199
Seattle	23,478	27,111	—3,633	10
Fort Knox		106,592	—106,592	39
Bureau of the Mint		171,651	—171,651	50
Total	334,049,522	11,685,239	322,364,283	2,547

[1] Includes $2,214 increment on revalued gold; $35,716,943 seigniorage on silver coin; $16,853,374 seigniorage on minor coin; $248,298,454 seigniorage on silver bullion revalued; and profit on sale of silver bullion $25,116,650
[2] Includes Assay Office at New York City and silver bullion depository at West Point.

Employees.—The total number of officers and employees, by departments, on June 30, 1946, is shown in the following statement:

Institution	Established under act of—	Number of employees, by departments										
		General					Engraving	Assaying	Coining	Melting and refining	Total	
		Administrative, etc.	Custodial: Guards	Custodial: Other	Mechanical	Deposits Division					June 30, 1946	June 30, 1945
Bureau of the Mint	Feb. 12, 1873	50									50	51
Philadelphia Mint	Apr. 2, 1792	121	71	63	116	66	32	10	819	354	1,652	2,608
San Francisco	July 3, 1852	31	29	6	28	9		12	76	72	263	424
Denver Mint	Apr. 21, 1862	34	38	2	53	4		8	114	81	334	437

[1] Allotment made from a lump construction appropriation.

Assay Commission's Annual Test of Coin for 1945

Section 3547 of the Revised Statutes of the United States, provides for an annual test of the domestic coinage executed during each calendar year by a commission, of whom part are ex officio members, the others, who serve without compensation, being appointed by the President. The purpose is to secure a due conformity in the silver coins to their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint February 13, 1946, reported the following results of their examination of the 1945 coinage:

Annual assay coins reserved at various mints during the calendar year 1945

Denomination	Philadelphia		Denver		San Francisco	
	Pieces	Value	Pieces	Value	Pieces	Value
Half dollar	15,751	$7,875.50	4,985	$2,492.50	5,078	$2,539.00
Quarter dollar	37,186	9,296.50	6,171	1,542.75	8,502	2,125.50
Dime	79,565	7,956.50	20,123	2,012.30	20,960	2,096.00
Total	132,502	25,128.50	31,279	6,047.55	34,540	6,760.50

REPORT OF THE COMMITTEE ON COUNTING

In accordance with section 3539 of the Revised Statutes, the committee on counting reports that the packages said to contain the pieces reserved by the several mints for the trial of coins were delivered to us by the Superintendent of the Mint at Philadelphia. Verification of the coins reserved was made by checking same against the original record of coin deliveries and reservations for assay in respect to the Philadelphia Mint, and against transcripts furnished the committee showing reservations for assay from the Denver and San Francisco Mints.

At random the three committees selected from the deliveries a certain number of packages, and it was the intention of the committees to include all denominations. Of the packages selected, the coins contained therein were counted and it was found that a sufficient number of pieces had been reserved in each instance as against the amounts shown to be delivered to the superintendents of the respective mints for that particular day, in accordance with the provisions of section 3539 of the Revised Statutes of the United States, which requires that 1 silver coin be reserved out of each 2,000 delivered.

REPORT OF THE COMMITTEE ON WEIGHING

The committee on weighing reports that it selected at random a total of 170 coins, consisting of 85 coins from the Philadelphia Mint, 40 coins from the Denver Mint, and 45 coins from the San Francisco Mint. These coins were taken from 757 different deliveries and are believed to be adequately representative of the year's coinage of each mint.

The coins were weighed directly against weights from the set of coin and grain weights regularly reserved for the use of the Commission. This set was delivered under seal of the National Bureau of Standards, and was accompanied by a certificate from that Bureau showing that the errors of all weights of the set were negligible.

Weighings were made with a precision of 0.01 grain on a balance, the sensitiveness, accuracy, and reliability of which was tested and found adequate before the beginning of the work on February 13, and again on the morning of February 14.

It is to be noted that the weight of each coin was well within the tolerance allowed by law.

The following table shows the maximum deviation of the heaviest and lightest coins of each denomination from each mint as found from individual weighings:

Denomination	Legal deviation allowed	Actual deviation					
		Philadelphia		Denver		San Francisco	
		Heavy	Light	Heavy	Light	Heavy	Light
	Grains	*Grain*	*Grain*	*Grain*	*Grains*	*Grain*	*Grain*
Half dollar	1.5	0.930	0.808	0.663	1.158	0.777	0.807
Quarter dollar	1.5	.885	.881	.583	.756	.505	.660
Dime	1.5	.854	.882	.675	.608	.398	.506

Considering the 170 coins as a group, the average deviation, with regard to sign was found to be only 0.034 grain. In other words, of the coins weighed, the 97 coins were very nearly offset by the 73 coins. The average error without regard to sign was 0.34 grain. In general, any coin taken at random from any mint appears equally likely to be heavy or light.

REPORT OF THE COMMITTEE ON ASSAYING

In compliance with section 3547 of the Revised Statutes, the Committee on Assaying is pleased to report that the assays have been completed on samples taken from the different lots of coin, representing all denominations of silver coined during the calendar year 1945, by the United States Mints at Philadelphia, Denver, and San Francisco.

No gold was coined at any of the mints during the year.

The results of assays on individual coins and mass melts of coins are satisfactory, being well within the limits of tolerance, which is three one-thousandths for silver coinage.

The highest and lowest assay on an individual coin from each of the three mints is as follows:

	Highest	*Lowest*
Philadelphia Mint	900.4	898.4
Denver Mint	900.4	898.6
San Francisco Mint	900.4	898.6
Result of mass melting:		
Philadelphia Mint	899.3	
Denver Mint	899.5	
San Francisco Mint	899.3	

The assay balances were tested and found to be in adjustment. The nitric acid used for assaying was found to be free from chlorine and the weights used for weighing the samples for assay were checked against a set of weights that had been standardized by the National Bureau of Standards.

The foregoing report, covering the operations of the mints, assay offices, and bullion depositories of the United States for the fiscal year ending June 30, 1946, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

Hon. JOHN W. SNYDER,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES FOR THE CALENDAR YEAR 1945

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1945

INTRODUCTION

The official estimate of production of gold and silver in the United States, made by the Bureau of the Mint, is based upon arrivals at United States Mints and Assay Offices and at privately owned refineries. The mints and assay offices determine the State source of all newly-mined unrefined material at the time deposits are received. The State source of material received by privately owned refineries is determined from information submitted by them and by intervening smelters, mills, etc., involved in the reduction processes.

The estimated industrial consumption of gold and silver is based upon sales by mints and assay offices, private refiners, dealers and manufacturers, plus an estimate of domestic coin melted for industrial use. From the total thus calculated there is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net materials consumed.

Gold production

Production of gold during the calendar year 1945 by the several States, Alaska, and the Philippine Islands, based on arrivals at mints and assay offices and private refineries, amounted to approximately 929,000 fine ounces with a value of $32.5 million. While the total production was 9 percent smaller than in 1944, several States showed an increase. These States were California, New Mexico, South Dakota, Vermont, Washington, and Alaska. Utah was the leading producer in 1945 with an output valued at $9.5 million, followed in order by California with $5.0 million, Colorado with $3.6 and Nevada with $3.2 million.

The grand total gold production of the United States and Territories since 1792 amounts to 274,512,636 fine ounces valued at $6,328,473,355. For production by calendar years 1792–1943, see the 1944 Annual Report of the Director of the Mint, page 36.

Production in 1944 and 1945 of gold mined in the several States and Territories, with percentage increase (+) or decrease (−) for the latter year (based on arrivals at mints and assay offices and private refineries)

State in which mined	Gold refinery production				
	1944		1945		Percentage change
	Ounces	Value [1]	Ounces	Value [1]	
Alabama			5	$175	
Alaska	50,848	$1,779,680	60,331	2,111,585	+18.6
Arizona	127,619	4,466,665	78,246	2,738,610	−38.7
California	115,555	4,044,425	142,794	4,997,790	+23.6
Colorado	111,484	3,901,940	101,635	3,557,225	−8.8
Georgia	4	140			
Idaho	22,326	781,410	18,820	658,700	−15.7
Montana	49,127	1,719,445	42,094	1,473,290	−14.3
Nevada	115,561	4,044,635	90,596	3,170,860	−21.6
New Mexico	11,535	403,725	13,384	468,440	+16.0
North Carolina	21	735			
Oregon	1,290	45,150	734	25,690	−43.1
Pennsylvania	2,117	74,095	1,608	56,280	−24.0
South Dakota	10,875	380,625	41,002	1,435,070	+277.0
Tennessee	222	7,770	148	5,180	−33.3
Texas	43	1,505			
Utah	353,550	12,374,250	270,969	9,483,915	−23.4
Vermont	101	3,535	102	3,570	+1.0
Virginia	95	3,325	74	2,590	−22.1
Washington	49,846	1,744,610	52,857	1,849,995	+6.0
Wyoming	19	665	4	140	
Philippines			13,490	472,150	
Total	1,022,238	35,778,330	928,893	32,511,255	−9.1

[1] Gold valued at $35 per ounce.

Silver production

Production of silver during the calendar year 1945 by the several States, Alaska and the Philippine Islands, based on arrivals at mints and assay offices and private refineries, amounted to over 29 million fine ounces, a decrease of 18 percent over the output in 1944. Five States, however, showed an increased production in 1945, namely, California, Colorado, New Mexico, South Dakota, and Vermont. Idaho ranked first with 8.2 million ounces; Utah ranked second with 6.2 million ounces, followed by Montana with 5.5 million, and Arizona with 3.4 million ounces.

The grand total silver production of the United States and Territories since 1792 amounts to 3,891,014,674 fine ounces with a commercial value of $2,988,468,671. For production by calendar years 1792–1943, see the 1944 Annual Report of the Director of the Mint, page 36.

The following table gives the estimated production, by State, for the calendar years 1944 and 1945:

Production in 1944 and 1945 of silver mined in the several States and Territories, with percentage increase (+) or decrease (−) for the latter year (based on arrivals at mints and assay offices and private refineries)

State in which mined	Silver refinery production				Percentage change
	1944		1945		
	Ounces	Value [1]	Ounces	Value [1]	
Alabama			1	$1	
Alaska	15,240	$10,837	8,811	6,266	−42.2
Arizona	4,674,097	3,323,802	3,411,405	2,425,888	−27.0
California	791,519	562,858	950,211	675,706	+20.0
Colorado	2,136,140	1,519,033	2,406,844	1,711,534	+12.7
Idaho	10,645,179	7,569,905	8,227,758	5,850,850	−22.7
Illinois	3,002	2,135	1,546	1,099	−48.5
Michigan	53,605	38,119	20,007	14,227	−62.7
Missouri	104,361	74,212	20,494	14,574	−80.4
Montana	6,669,273	4,742,594	5,493,448	3,906,452	−17.6
Nevada	1,408,259	1,001,429	1,155,860	821,945	−17.9
New Mexico	545,081	387,613	653,893	464,991	+20.0
New York	39,029	27,754	14,200	10,098	−63.6
North Carolina	1,461	1,039			
Oregon	18,599	13,226	12,352	8,784	−33.6
Pennsylvania	13,549	9,635	10,530	7,488	−22.3
South Dakota	5,312	3,777	41,191	29,291	+675.4
Tennessee	45,907	32,645	35,391	25,167	−22.9
Texas	21,471	15,268	20,849	14,826	−2.9
Utah	8,104,520	5,763,214	6,244,394	4,440,458	−23.0
Vermont	18,914	13,450	20,038	14,249	+5.9
Virginia	19,297	13,722	8,505	6,048	−55.9
Washington	317,231	225,586	288,303	205,015	−9.1
Wyoming	3	2	16	11	
Philippines			17,208	12,237	
Total	35,651,049	25,351,855	29,063,255	20,667,205	−18.5

[1] Silver valued in 1944 and 1945 at $0.7111+, the price established for newly mined domestic silver by act of July 6, 1939.

Gold consumption

Gold used in the industrial arts in the United States during the calendar year 1945 is estimated at 3.1 million fine ounces with a value of $108.9 million, compared with 2.8 million fine ounces valued at $97.3 million in 1944, an increase of 12 percent. The following statement shows a comparison of gold consumption during the calendar years 1944 and 1945:

Gold consumption	Calendar year 1944	Calendar year 1945
	Value	*Value*
Bar sales by mints and assay offices [1]	$41,589,833	$82,763,912
Sales by private refiners and dealers	[2] 81,387,390	57,172,325
Total	122,977,223	139,936,237
Old jewelry, plate, scrap, etc. returned to private refiners and dealers, and to monetary use	25,678,940	30,991,905
Net new material used in industry	97,298,283	108,944,332

[1] See table on page 6 for mint issues of gold by months.
[2] Revised.

Silver consumption

Silver used in arts and industry in the United States during the calendar year 1945 is estimated to have aggregated 126.3 million fine ounces, an increase of 6.2 million ounces over the amount used in 1944. The statement below compares the amounts issued in 1944 and 1945:

Silver consumption	Calendar year 1944	Calendar year 1945
	Fine ounces	*Fine ounces*
Bar payment in exchange for bullion at mints and assay offices	154,196	183,925
Bar sales under Green Act by mints and assay office [1]	38,287,082	81,560,599
Silver in various forms issued by private refiners and dealers [2]	137,770,787	102,606,868
United States silver coin (estimated)	77,344	309,375
Total	176,289,409	184,660,767
Old jewelry, plate, scrap, etc., returned to private refiners and dealers and to monetary use	56,189,409	58,360,767
Net new material used in industry	120,100,000	126,300,000

[1] Excludes silver sold under Green Act for monetary use.
[2] Excludes silver purchased from mints and assay offices under Green Act.

Review of Gold and Silver Mining Industry

A review of the gold and silver mining industry in the various States and Alaska for the calendar year 1945, for which acknowledgment is made to the United States Bureau of Mines, follows. It should be noted that production figures stated therein are based on a mine canvass of recoverable metal and, due principally to the time lag involved before this material reaches the mints and assay offices and private refineries, will not necessarily agree, on a yearly basis, with the figures published by the Bureau of the Mint.

ALASKA

The value of the production of gold and silver from mines in Alaska was $2,391,194 in 1945, compared with $1,734,862 in 1944, according to Charles White Merrill, United States Department of the Interior, Bureau of Mines. Gold recovered from ores and gravels totaled 68,117 fine ounces valued at $2,384,095, an increase of 38 percent from the 1944 output but only 9 percent of the quantity produced in 1940, the recent peak year. Except for 1944, the 1945 output was the smallest since 1894. Alaska silver production in 1945—9,983 fine ounces valued at $7,099—was 25 percent less than in 1944 and the smallest since 1893.

Of the total Alaska output of gold in 1945, placer mines produced 85 percent and floating connected-bucket dredges 51 percent, compared with 68 percent for all placers and 53 percent for dredges in 1944. Fourteen dredges operated in 1945, compared with 9 in 1944. Other placer operations numbered 188 and recovered 34 percent of the total gold produced, compared with 189 operations producing 15 percent in 1944. The connected-bucket dredge operators producing over 2,500 ounces of gold in 1945 listed in order of output were: Arctic Circle Exploration Co., Fairhaven district; United States Smelting, Refining, and Mining Co., Fairbanks district; New York Alaska Gold

Dredging Co., Tuluksak-Aniak district; and Gold Placers, Inc., Circle district. No other placer operator produced as much as 2,500 ounces of gold in 1945.

Eighteen lode mines were active in 1945, compared with 9 in 1944, and these contributed 15 percent of the total gold output, compared with 32 percent in 1944. Virtually all the lode gold was recovered at amalgamation mills from gold ore. Idleness of the Alaska Juneau Gold Mining Co. mine at Juneau was the principal cause of the greatly reduced importance of lode gold in Alaska's total production. This company closed its mine indefinitely on April 9, 1944, but gold recovered from a mill clean-up resulted in the company ranking as Alaska's second largest lode gold producer in 1945. The Cleary Hill Mines Co., the leading producer in 1945, operated its mine on Cleary Creek in the Fairbanks district.

The total production of gold and silver in Alaska, in terms of recovered metals, from 1880 through 1945, has been 25,856,647 ounces of gold, valued at $617,997,247, and 19,748,505 ounces of silver, valued at $14,047,822.

ARIZONA

Despite the rescinding, effective July 1, 1945, of the War Production Board gold-mine closing order (L–208), issued October 8, 1942, the output of gold in Arizona declined from 112,162 fine ounces valued at $3,925,670 in 1944 to 77,223 fine ounces valued at $2,702,805 in 1945, a 31 percent loss, according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines; no revival at gold mines in the State was in evidence during the year. Copper ore is the principal source of gold in Arizona, and in 1945 the output of gold from this source declined 28,848 ounces (32 percent) from that in 1944, owing to the large decrease in production of copper ore; and gold from siliceous ores declined 8,427 ounces (78 percent) but that from zinc-lead ore increased 3,580 ounces (49 percent). Gold from lode mines decreased from 111,920 ounces in 1944 to 76,683 ounces in 1945, but that from placer mines increased from 242 to 540 ounces. Copper ore yielded more than 80 percent of the State total gold, zinc-lead ore 14 percent, siliceous ores 3 percent, and lead ore, zinc-copper ore, and placers most of the remainder. Gold recovered from ore amalgamated amounted to 25 ounces; from old tailings cyanided, 4 ounces; from concentrates smelted, 51,573 ounces; from crude ore sent direct to smelters, 25,081 ounces; and from placers, 540 ounces. The chief gold-producing districts in Arizona in 1945 were Ajo, Warren (Bisbee), Verde (Jerome), Big Bug, Copper Mountain (Morenci), Pioneer (Superior), and Globe-Miami. The New Cornelia mine of the Phelps Dodge Corp. in Pima County was the leading gold producer in Arizona; it was followed by the Copper Queen (Bisbee) branch of the Phelps Dodge Corp. in Cochise County, the United Verde and Iron King mines in Yavapai County, the Morenci branch of the Phelps Dodge Corp. in Greenlee County, the Magma mine in Pinal County, and the Denn mine in Cochise County. These seven properties produced 88 percent of the State total output.

The total gold production in the State of Arizona, in terms of recovered metals, from 1860 to 1945, inclusive, has been 10,789,135 ounces.

The output of recoverable silver in Arizona in 1945 was 3,558,216 fine ounces (valued at $2,530,287)—a 19 percent decrease from 1944. The chief decreases were 992,865 ounces (32 percent) in silver from copper ore, 106,466 ounces (50 percent) from zinc-copper and zinc-lead-copper ores, 45,044 ounces (23 percent) from siliceous ores, and 27,749 ounces (34 percent) from lead ore. The only increase was 330,264 ounces (42 percent) from zinc-lead ore. Copper ore yielded 59 percent of the State total silver; zinc-lead ore, 32 percent; siliceous ores, 4 percent; zinc-copper ore and zinc-lead-copper ore, 3 percent; and lead ore and zinc ore nearly all the remainder. The Phelps Dodge Corp. continued to be the chief silver producer in Arizona, although its output was 23 percent less than in 1944; its four properties (Copper Queen, Morenci, New Cornelia, and United Verde) produced 68 percent of the State gold output, more than 56 percent of the silver, and 58 percent of the copper. Other large silver producers in Arizona in 1945 were the Iron King, Magma, Trench-Flux, San Xavier (Eagle-Picher Mining & Smelting Co.), Castle Dome, and Shattuck Denn properties. The chief silver-producing districts were the Warren (Bisbee), Verde (Jerome), Copper Mountain (Morenci), Big Bug, Ajo, Pioneer (Superior), Globe-Miami, Harshaw, and Pima; more than 40 percent of the total silver came from the Warren and Verde districts, but the output from these districts decreased 701,574 ounces from 1944.

The total silver production in the State of Arizona, in terms of recovered metals, from 1860 to 1945, inclusive, has been 289,418,649 ounces.

CALIFORNIA

California gold production in 1945 was 26 percent above the record low level of 1944, an increase for the first year since 1940, according to Alfred L. Ransome and Burton H. Marliave, of the United States Department of the Interior, Bureau of Mines. Silver production was 27 percent higher than in 1944, making 1945 the second consecutive year of increase.

The upward trend in gold production was largely the result of termination of War Production Board Limitation Order L–208 on July 1, 1945, the immediate effect of which was an accelerated output from placer-mining operations. A continuation of higher wages, rising prices of supplies and equipment and difficulties of obtaining them, high taxes, the fixed price for gold, and the country-wide economic uncertainty following the end of the war were factors that prevented a more rapid recovery.

Monthly gold-production figures covering the period since January 1937 show an upward trend until a peak was reached during 1940. In 1941, however, a reaction set in which gained headway in 1942. By February 1943, a production of 8,547 ounces was reported compared with a high of 149,718 ounces recorded in December 1940. The 1945 monthly data reveal a decided upward trend in the latter half of the year, the production in January being 10,126 ounces, in June 8,970 ounces (the low point for the year), and in December 18,266 ounces. The monthly average for 1945 was 12,328 ounces compared with a monthly average of 9,781 ounces in 1944; in 1940 the monthly average was 121,306 ounces.

The output of recoverable gold from California ores, gravels, and retreated tailings in 1945 was 147,938 fine ounces valued at $5,177,830 compared with 117,373 ounces valued at $4,108,055 in 1944; the increase in both quantity and value was 26 percent. In 1945, 87 lode mines produced 54,458 ounces of gold, valued at $1,906,030, and 99 placer mines produced 93,480 ounces of gold, valued at $3,271,800. Placer mines supplied 63 percent and lode mines 37 percent of the total in 1945 compared with 64 percent for placer mines and 36 percent for lode mines in 1944. Of the gold derived from lode operations 86 percent was recovered from dry gold ore, 8 percent from zinc ore, 3 percent from lead ore, 1 percent from copper ore, and the remainder from gold-silver, zinc-copper, and zinc-lead ores. Metallurgical data show that 21 percent of the lode gold in 1945 (35 percent in 1944) was recovered by smelting of concentrates, 51 percent (35 percent in 1944) by amalgamation of ore and old tailings, 22 percent (22 percent in 1944) by cyanidation of ore, old tailings, and concentrates, and 6 percent (8 percent in 1944) by smelting of ore and old tailings.

Although the yardage of material handled at placer mines increased 38 percent, the output of placer gold gained only 25 percent. On the other hand, lode gold production advanced 29 percent despite a reduction in the tonnage of material treated.

In the following data on placer mining, 1944 figures are given in parentheses. Dredging was the leading method of working placer deposits in 1945, both as to yardage of gravel washed and the quantity of placer gold recovered. Floating dredges of the connected-bucket type washed 30,738,000 (21,524,000) cubic yards of gravel and recovered 88,318 (64,925) ounces of gold valued at $3,091,130 ($2,272,375) or 94 (87) percent of the placer gold produced in the State in 1945. Dragline dredges (those having a floating washing plant to which gravel is delivered by a dragline excavator) washed 414,400 (1,213,000) yards of gravel which yielded 1,242 (6,241) ounces of gold valued at $43,470 ($218,435). Nonfloating washing plants to which gravel was delivered by mechanical means washed 519,300 (223,000) yards of gravel and recovered 974 (1,210) ounces of gold valued at $34,090 ($42,350). Hydraulic mines produced 922 (838) ounces of gold valued at $32,270 ($29,330) derived from 282,300 (212,000) yards of gravel; 2,700 (3,800) yards of gravel from drift mines were washed, from which 498 (424) ounces of gold valued at $17,430 ($14,840) were recovered. Small-scale hand-operated equipment, including small sluice boxes, long toms, dip boxes, rockers, and pans, was used in the production of 1,526 (1,408) ounces of gold valued at $53,410 ($49,280).

Nevada County stood first among California leading gold-producing counties in 1945; most of the gold produced in the county was credited to lode mines in the Grass Valley-Nevada City district. Sacramento and Yuba Counties, because of the productivity of connected-bucket dredges following the termination of Order L–208, ranked second and third, respectively, in 1945. Stanislaus County, which occupied fourth place, derived all of its 1945 gold output from connected-bucket dredging. San Joaquin County, which occupied fifth place, derived almost all of its 1945 gold production from connected-bucket dredging. Other counties producing over $100,000 in gold in 1945, listed in order of output, were Butte County (largely connected-bucket dredging),

Sierra County (gold ore), Shasta County (dredging), Tuolumne County (gold ore), and Mariposa County (zinc ore and gold ore).

The principal gold-producing mines in California in 1945, listed by operators in order of output, were the Yuba Consolidated Gold Fields (Yuba Unit), Yuba County (dredge); Natomas Co., Sacramento County (dredge); Idaho Maryland Mines Corp., Nevada County (gold ore); Empire Star Mines Co., Ltd., Nevada County (gold ore); Gold Hill Dredging Co., San Joaquin County (dredge); Tuolumne Gold Dredging Corp., Stanislaus County (dredge) Eagle Shawmut Mine, Tuolumne County (gold ore); Original Sixteen to One Mine, Inc., Sierra County (gold ore); Capital Dredging Co., Sacramento County (dredge); Eagle Shawmut Mine (Penn mine), Calaveras County (zinc ore); La Grange Gold Dredging Co., Stanislaus County (dredge); Ancho-Erie Mining Co., Nevada County (gold ore); French Gulch Dredging Co., Shasta County (dredge); Gold Hill Dredging Co., Butte County (dredge), and Yuba Consolidated Gold Fields (Butte Unit), Butte County (dredge).

The output of silver from California ores, gravels, and retreated tailings in 1945 was 986,798 fine ounces, valued at $701,723, compared with a production of 778,936 ounces, valued at $533,910, in 1944. Of the lode silver 57 percent was derived from zinc-lead ore, 18 percent from zinc ore, 11 percent from lead ore, 10 percent from zinc-copper ore, and the remainder from gold, gold-silver, silver, and copper ores. A small quantity of silver was recovered as a byproduct of dredging and other placer mining carried on principally for gold. Smelting of concentrates supplied 31 percent of the lode silver recovered in the State, smelting of ore and old tailings 68 percent, and cyanidation and amalgamation of ore and old tailings 1 percent.

The principal silver-producing mines in California in 1945, listed by operators and in order of output, were Darwin Mines, Arthur J. Theis, trustee (operated by Anaconda Copper Mining Co. following purchase of property on August 1, 1945), Inyo County (zinc-lead ore); Red Cloud Mines, Inc., Mariposa County (zinc ore); The Mountain Copper Co., Ltd., Shasta County (zinc-copper ore); Eagle Shawmut Mine (Penn mine), Calaveras County (zinc ore); Shoshone Mines Inc., and Finley Co. (operating at different periods of the year the Columbia No. 2 mine) Inyo County (lead ore), L. D. Foreman & Co., Inyo County (lead ore); Dunton-Ray & Greenwood, San Bernardino County (zinc-lead ore); Hoefling Bros., Butte County (zinc ore); Winston Copper Co., Amador County (copper ore), and Idaho Maryland Mines Corp., Nevada County (gold ore).

CENTRAL STATES

From 1941 through 1945 no mine production of gold was reported from ores mined in the Central States. The output of recoverable silver in 1945 totaled 118,883 fine ounces valued at $84,539 compared with 148,898 ounces valued at $105,883 in 1944, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. The principal producer of silver continued to be the St. Joseph Lead Co., which operates large lead mines in the southeastern Missouri district. The concentrates made in milling ore from these mines generally contain from 1 to 2 ounces of silver to the ton. Con-

centrates shipped from other lead mines in this region also contain some silver. The lead bullion derived from smelting the concentrates carries most of the silver, but part of the bullion is not desilverized. Silver recovered from lead bullion and residues derived from smelting lead concentrates produced in the southeastern Missouri district in 1945 totaled 89,460 ounces; in addition, 5,362 ounces were recovered from copper concentrates made in treating lead-copper-cobalt-nickel-iron ore from this region. Lead concentrates recovered from zinc-lead-fluorspar and lead-fluorspar ores in the southern Illinois district in 1945 contained 2,198 ounces of recoverable silver. In Michigan 21,863 ounces of silver were recovered from copper ore. The ore containing the recoverable silver came from the Quincy mine, which was closed at the end of August. Most of this silver was contained in copper bullion shipped to the electrolytic refinery at Laurel Hill, N. Y.; the rest was native silver recovered in mill jigs and by hand picking from tables. Considerable silver not reported as mine production is retained in copper bullion used for making commutators in electric motor armatures, engravers' plate, trolly wire, and other articles. The silver is said to raise annealing temperatures, prevent brittleness, facilitate soldering, and increase hardness.

COLORADO

Despite the rescinding of War Production Board Limitation Order L–208, effective July 1, Colorado gold output in 1945 was the smallest since 1873, and silver production the smallest since 1873, except for the period 1931–33, according to George E. Woodward and S. A. Gustavson, of the United States Department of the Interior, Bureau of Mines. The shortages of labor and supplies in the principal gold-producing districts were the reasons most generally given for the small gold and silver output from Colorado mines. Gold recovered from Colorado mines in 1945 totaled 100,935 fine ounces, valued at $3,532,725, compared with 111,455 in 1944. Placer mining on a large scale was resumed in Park County in July and contributed much to the State total production.

Ore sold or treated in Colorado totaled 1,357,551 tons in 1945 compared with 1,550,422 in 1944. In all, 195 lode mines and 41 placer mines were active in 1945 compared with 196 lode mines and 13 placer mines in 1944.

Although virtually all ores produced from Colorado mines in 1945 contain gold as a valuable constituent, ores from mines in Boulder, La Plata, Park, Rio Grande, and Teller Counties were valuable chiefly for their gold content. The principal gold-producing districts in 1945 were: Cripple Creek (gold ores), in Teller County, which produced 28 percent of the State output of recoverable gold; Animas (principally complex gold-silver, copper, lead, and zinc ores), in San Juan County, 22 percent; Upper San Miguel (principally complex gold-silver-copper-lead-zinc ores), in San Miguel County, 18 percent; California (principally zinc-lead ores), in Lake County, 16 percent; Fairplay (chiefly placer gold), in Park County, 7 percent; and Sneffels (complex gold-silver-lead-zinc-ores), in Ouray County, 3 percent. Dry and siliceous ores yielded 73 percent of the State total

gold; zinc-lead ores, 17 percent; placers, 8 percent; and copper, lead, zinc, zinc-copper, zinc-lead-copper ores, 2 percent.

Mine production of recovered silver in Colorado in 1945 was 2,226,780 fine ounces valued at $1,583,488, a decrease of 1 percent in both quantity and value from the 1944 output. The Creede district in Mineral County continued to be the largest producer of silver and contributed 19 percent of the State total. Other principal silver-producing districts in 1945 were the California (Leadville), in Lake County, slightly less than 19 percent; Animas, in San Juan County, 14 percent; Upper San Miguel, in San Miguel County, 12 percent; Pioneer (Rico), in Dolores County, 7 percent; and Sneffels, in Ouray County, 4 percent. Dry and siliceous ores yielded 52 percent of the total State output of silver; zinc-lead ore, 41 percent; and copper, lead, zinc-lead-copper ores and placers, 7 percent.

The Golden Cycle mill at Colorado Springs operated throughout the year on company and custom ores from nearly all mining districts in the State; 227,063 tons of ore of all classes were treated in 1945 compared with 221,543 tons in 1944. Of the total ore treated, 129,770 tons (113,565 tons in 1944) were company and custom gold-silver sulfotelluride ores from the Cripple Creek district (Teller County), and 97,293 tons (107,978 tons in 1944) were miscellaneous zinc-lead, zinc-lead-copper, and gold ores and middlings from Boulder, Chaffee, Clear Creek, Custer, Fremont, Gilpin, Gunnison, Lake, Park, Pitkin, Saguache, San Juan, San Miguel, and Summit Counties. The tonnage from the Cripple Creek district in 1945 was well over 50 percent dump ore, and as a result, the average original gold content of the material treated was considerably below normal.

The bulk of the placer-gold output of Colorado in 1945 came from Park County and was recovered by a floating connected-bucket dredge which began operations in July. The remainder came from small-scale operations scattered throughout the State.

The total production of gold and silver in Colorado, in terms of recoverable metals, from 1858 through 1945, has been 38,915,330 fine ounces of gold valued at $855,913,514, 48 percent of which was produced from mines in the Cripple Creek district of Teller County, and 728,186,527 fine ounces of silver valued at $565,760,083.

EASTERN AND APPALACHIAN STATES

Nearly all the gold and silver mined in the Eastern and Appalachian States in 1945, as in the two preceding years, was a byproduct of the recovery of other metals. Gold recovered totaled 1,857 fine ounces valued at $64,995 compared with 2,595 ounces valued at $90,825 in 1944, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. The silver production in 1945 amounted to 81,983 ounces valued at $58,299 compared with 124,006 ounces valued at $88,182 in 1944. The estimated total output of gold in the Southern Appalachian States (Alabama, Georgia, Maryland, North Carolina, South Carolina, Tennessee, and Virginia) from 1799 to 1945 is recorded as 2,597,939 ounces valued at $55,392,704. Three of these States (Alabama, Tennessee, and Virginia) contributed to the output of gold and silver in 1945, but their combined production was only 165 ounces of gold and 36,692 ounces of silver.

In the Northern Appalachian region, Pennsylvania and Vermont together produced 1,692 ounces of gold and 31,020 ounces of silver in 1945, and New York produced 14,271 ounces of silver.

When the gold mines were shut-down in 1942 for the duration of the war, the principal producers of gold in the Eastern and Appalachian States were the Haile gold mine in Lancaster County, S. C., and the Condor (old Howie) in Union County, N. C., both equipped with cyanidation mills. Although War Production Board Limitation Order L–208 which had closed the mines was revoked effective July 1, 1945, economic conditions remained unfavorable for gold mining the rest of the year. The only output made from straight gold or gold-silver mines was 5 ounces of gold and 1 ounce of silver recovered from 400 tons of old tailings put through a burlap-lined sluice at the Hog Mountain mine in Tallapoosa County, Ala. The Cornwall iron (magnetite-pyrite-chalcopyrite) mine of the Bethlehem Steel Co. in Lebanon County, Pa., continued to be the largest producer of by-product gold. The ore, which also yields byproduct silver, is treated by magnetic concentration followed by flotation of the tailings from the magnetic separators for the recovery of copper concentrate, which contain most of the gold and silver, and pryite concentrate, which contain cobalt. The copper concentrate is shipped to the Phelps Dodge smelter and electrolytic refinery at Laurel Hill, N. Y., where gold and silver are recovered. The Vermont output of 104 ounces of gold and 20,586 ounces of silver in 1945 was also recovered from copper concentrate shipped to the Laurel Hill plant; the concentrate was derived from copper ore from the Elizabeth mine of the Vermont Copper Co. in Orange County. The 14,271 ounces of silver produced in New York came from zinc-lead-iron-silver ore from the Balmat mine of the St. Joseph Lead Co. in St. Lawrence County; the silver was recovered from lead concentrate shipped to the company smelter at Herculaneum, Mo. In Tennessee 148 ounces of gold and 35,391 ounces of silver were recovered from copper-iron sulfide ore from the mines of the Tennessee Copper Co. at Ducktown. Copper concentrate from mills treating this ore and some of the crude ore were smelted in the company smelter at Copperhill. The blister copper produced, which contained the recoverable gold and silver, was shipped to an electrolytic refinery on the Atlantic seaboard. The Virginia output of 12 ounces of gold and 1,300 ounces of silver was recovered from zinc-lead ore from the Valzinco mine in Spotsylvania County, closed in January 1945, and copper ore from the Toncrae mine in Floyd County, operated from January through August.

IDAHO

The output of recoverable gold in Idaho was 17,780 fine ounces ($622,300) in 1945, the smallest since 1927 and 29 percent less than that in 1944, according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines. The yield of gold from lode mines decreased from 24,872 ounces in 1944 to 16,011 ounces in 1945, but that from placers increased from 136 to 1,769 ounces. The increase from placers resulted from resumption, in September, of bucket dredging at Idaho City in Boise County after L–208 (the War

Production Board gold-mine closing order of October 8, 1942) was rescinded effective July 1, 1945. The Idaho-Canadian Dredging Co. resumed operating its 7½-cubic foot bucket dredge at Idaho City in September. In 1945 bucket dredging recovered 1,593 fine ounces of gold, hydraulic and sluicing 168 ounces, and drift mining 8 ounces. The decline of 8,861 fine ounces (nearly 36 percent) in output of recoverable gold from lode mines resulted from a marked decrease in output of gold from the Boise-Rochester-Monarch (Talache Mines, Inc.) property at Atlanta, Yellow Pine mine at Stibnite, and Triumph property near Hailey. About 81 percent of the State total gold in 1945 came from zinc-lead ore from the Triumph property in Blaine County, gold-tungsten-antimony ore from the Yellow Pine mine in Valley County, zinc-lead ore from various mines in the Coeur d'Alene region, and bucket dredging in Boise County. Gold recovered from ore amalgamated amounted to 373 ounces; from concentrates smelted, 14,136 ounces and from crude ore sent direct to smelters, 1,502 ounces.

The total production of gold, in terms of recoverable metal, from 1863 to 1945 inclusive, has been 7,797,774 ounces.

Although Idaho's production of recoverable silver dropped from 9,931,614 fine ounces in 1944 to 8,142,667 fine ounces in 1945, the State remained the largest producer of silver in the United States; it has been in first place since 1933. Large decreases in silver output were reported by the Sunshine Mining Co., Coeur d'Alene Mines Corp. (Mineral Point mine), Bunker Hill & Sullivan Mining & Concentrating Co., Federal Mining & Smelting Co., Triumph Mining Co., Clayton Silver Mines, Tamarack & Custer Consolidated Mining Co., Bradley Mining Co. (Yellow Pine mine), and Sullivan Mining Co. (Star mine); however, a marked increase was made from treating old tailings from the Osburn dump in the Coeur d'Alene region by the Hecla Mining Co. The Coeur d'Alene region produced 87 percent of the State total silver in 1945; the remainder came largely from the Warm Springs, Bayhorse, Deadwood Basin, Blue Wing, Yellow Pine, South Mountain, and Clark Fork districts. Of the State total silver, zinc-lead ore and old tailings yielded 49 percent, silver ore 44 percent, lead ore 5 percent, and zinc ore and slag and gold ore nearly all the remainder. The yield of silver from silver ore and lead ore decreased 1,379,469 ounces owing chiefly to the decline in output of ore from property operated by the Sunshine Mining Co.; and that from zinc-lead ore 334,603 ounces, owing to a decline in output of zinc-lead ore from most of the important producers.

Ten mines—the Sunshine, Polaris, Osburn tailings, Bunker Hill & Sullivan, Silver Dollar, Triumph, Page, Morning, Sherman, and Star—produced more than 76 percent of the silver output of the State in 1945. All these mines except the Triumph are in the Coeur d'Alene region.

The total production of silver, in terms of recoverable metal, from 1863 to 1945, inclusive, has been 513,994,308 ounces.

MONTANA

Montana lodes in 1945 yielded 34,907 fine ounces of gold, and placers 9,690 fine ounces—a total of 44,597 fine ounces valued at $1,560,895—according to C. E. Needham and Paul Luff of the

United States Department of the Interior, Bureau of Mines. Compared with 1944, this represents a decline of 11 percent, attributed mainly to lower production from the copper-producing operations of the Anaconda Copper Mining Co. and to reduced output from a number of other larger gold mines.

Of the State total gold in 1945, 45 percent was derived from siliceous gold and silver ores, 33 percent from base-metal ores, and 22 percent from placers, compared with 51 percent from siliceous ores, 36 percent from base-metal ores, and 13 percent from placers in 1944. Ores concentrated yielded 32 percent of the State total gold, ores shipped to smelters nearly 28 percent, and ores treated at amalgamation and cyanidation mills (with or without concentrating equipment) more than 18 percent.

Placer mining showed increased activity following the revocation, effective July 1, of War Production Board Order L–208, and 56 percent more gold was recovered from gravels during the year than in 1944. The gain recorded was in connected-bucket and dragline dredging; output from hydraulicking, small-scale hand methods, and drift mining declined. Connected-bucket dredges washed 25 percent more gravel than in 1944 and recovered 56 percent more gold. The two operations—H. & H. Mines in Granite County and Porter Bros. Corp. in Lewis and Clark County—washed 97 percent of the total gravel mined in the State and produced 95 percent of the State placer gold.

The leading gold producers in 1945 were the Anaconda Copper Mining Co. (copper ore and waste materials) at Butte and Anaconda; Jardine Mining Co. (gold ore) at Jardine; Porter Bros. (placer); H. & H. Mines (placer); the Golden Sunlight mine (gold ore) near Whitehall; the Granite-Bimetallic tailing dump (gold-silver ore) at Philipsburg; and the U. S. Grant mine (gold-silver ore) near Virginia City. These seven producers furnished 78 percent of the State total gold.

The total production of gold in Montana, in terms of recovered metal, from 1862 to 1945, inclusive, has been 16,981,614 ounces.

The output of recoverable silver in Montana was 5,942,070 fine ounces in 1945, which represents a decline of 1,151,145 ounces (16 percent) from the output of 7,093,215 ounces in 1944.

Copper ores and tailings furnished over 75 percent of the State total silver; siliceous ores, 11 percent; zinc-lead ores, nearly 11 percent; and lead ores and zinc ores, less than 3 percent. Ores treated at concentrating mills yielded 87 percent of the total silver, and smelting ores nearly 13 percent; minor sources were slag fumed, ores amalgamated or cyanided in plants with or without concentrating equipment, and placers.

The Anaconda Copper Mining Co. remained the State leading silver producer, and from its copper mines, mine dumps, tailing dumps, slime ponds, zinc mines, and the North Butte and Flathead mines supplied 77 percent of the State total compared with 79 percent in 1944. Other important sources of silver were the Emma mine at Butte, the Granite-Bimetallic tailing dump at Philipsburg, the Mike Horse mine at Flesher, and the Elkhorn dump at Elkhorn.

The total production of silver in Montana, in terms of recovered metal, from 1862 to 1945, inclusive, has been 745,876,683 ounces.

NEVADA

Nevada gold production (in terms of recovered metal) in 1945 was 23 percent below the total for 1944, and was the lowest in quantity since 1895, according to Alfred L. Ransome and Burton H. Marliave, of the United States Department of the Interior, Bureau of Mines. Silver production fell 17 percent to the lowest level since 1899. Rising costs of labor, supplies, and equipment, the difficulty of obtaining them, and the fixed prices for gold and silver were factors in reducing Nevada's precious metal production. An expected increase in production of gold following the rescinding of War Production Board Limitation Order L–208 effective July 1, 1945, did not materialize, except in the case of placer mines. In 1943, for the first time in the history of the State, more gold was derived from base-metal ores than from dry ores; this condition continued in 1944 and again in 1945.

The output of gold from Nevada ores, retreated tailings, and gravels in 1945 was 92,265 fine ounces valued at $3,229,275 compared with 119,056 ounces valued at $4,166,960 in 1944 and was the lowest in quantity since 1895 and in value since 1933. Production of silver in 1945 was 1,043,380 fine ounces valued at $741,959 compared with 1,259,636 ounces valued at $895,741 in 1944. Silver output was thus the lowest in quantity since 1899 and in value since 1933.

Gold was recovered from the following sources: Copper ore, 56 percent; dry gold ore, 30 percent; placer gravel 10 percent; zinc-lead ore, 2 percent; dry gold-silver ore, 1 percent; and other ores 1 percent. Metallurgical data show that 64 percent of the State lode gold was recovered by the smelting of concentrates, 24 percent by cyaniding of ore and old tailings, 11 percent by the direct smelting of ore, and 1 percent by amalgamation of ore and old tailings. The proportion of gold recovered by cyanidation of ore and old tailings in 1945 was lowered to almost half of the percentage in 1944.

The principal Nevada gold mines in 1945, listed by operating companies and in order of output were Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); Consolidated Coppermines Corp., White Pine County (copper ore); Getchell Mine, Inc., Humboldt County (gold ore); Manhattan Gold Dredging Co., Nye County (connected-bucket dredge); Willow Creek Mines, Inc., Lander County (gold ore); Copper Canyon Mining Co. (and International Smelting & Refining Co.), Lander County (copper ore); Tonopah Divide Mining Co., Esmeralda County (gold ore); Combined Metals Reduction Co., Lincoln County (zinc-lead ore); Golden Dawn Mng. & Milling Co., Clark County (gold ore); and lessees of the Tonopah Mining Co., of Nevada, Nye County (gold-silver ore).

Nevada lode silver was recovered from the following sources in 1945: Zinc-lead ore, 33 percent; copper ore, 26 percent; lead ore, 16 percent; zinc ore, 10 percent; dry gold-silver ore, 7 percent; dry silver ore, 5 percent; and dry gold ore, 3 percent. Placer gravels washed primarily for gold yielded a small quantity of silver. Smelting of concentrates accounted for 57 percent of the lode silver produced in Nevada in 1945, and 43 percent was recovered by direct smelting of ore and old tailings. A very small quantity (0.46 percent) of silver was recovered by cyanidation of ore and old tailings; a negligible quantity of silver was recovered by the amalgamation of ore.

The principal silver mines in Nevada in 1945, listed by operating companies and in order of output, were: Combined Metals Reduction Co., Lincoln County (zinc-lead ore); Kennecott Copper Corp. (Nevada Mines Division), White Pine County (copper ore); McFarland & Hullinger, Elko County (silver and lead ores); Consolidated Coppermines Corp., White Pine County (copper ore); Copper Canyon Mining Co. (and International Smelting & Refining Co.), Lander County (copper ore); Prince Consolidated Mining Co. and lessees, Lincoln County (zinc, silver, and lead ores); Salt Lake-Pioche Mining Co. (Financier mine), Lincoln County (lead ore); Bristol Silver Mines Co., Lincoln County (copper and zinc ores); lessees of the Tonopah Mining Co., of Nevada, Nye County (gold-silver ore); and Ely Valley Mine, Lincoln County (zinc ore).

NEW MEXICO

Mines in New Mexico yielded (in terms of recovered metals) 5,604 fine ounces of gold valued at $196,140 in 1945, according to George E. Woodward and S. A. Gustavson of the United States Department of the Interior, Bureau of Mines. The lifting of Government restrictions on gold mining on July 1, 1945, had little effect on the output during the remainder of the year 1945. Except for 1943, the gold output was less than for any year since 1876. The principal gold-producing districts in 1945 were: Central, in Grant County, which contributed 29 percent of the State output of recovered gold; Mogollon, in Catron County, 25 percent; Lordsburg, in Hidalgo County, 25 percent; and Steeple Rock, in Grant County, 17 percent; all others combined produced about 4 percent. Dry and siliceous ores yielded 53 percent of the State total gold; zinc-lead ore 33 percent; copper ore 10 percent; and lead and zinc ores and placers 4 percent.

Mine production of recovered silver in New Mexico in 1945 was 465,127 ounces valued at $330,757, a decrease of 13 percent on both quantity and value compared with 1944. The Central district in Grant County, contributed 44 percent of the total State output of recovered silver in 1945; Mogollon, in Catron County, 20 percent; Lordsburg, in Hidalgo County, 19 percent; Magdalena, in Socorro County, 8 percent; Steeple Rock, in Grant County, 6 percent; and Pinos Altos, in Grant County, 2 percent. Zinc-lead ore yielded 51 percent; dry and siliceous ores 34 percent; copper ore 5 percent; and lead and zinc ores and placers 10 percent.

The total production of gold and silver in New Mexico (in terms of recovered metals) from 1848 through 1945 has been 2,178,826 ounces of gold valued at $49,593,103 and 67,416,731 ounces of silver valued at $52,672,094.

OREGON

Production of gold in Oregon in 1945 advanced 226 percent above the 1944 output, entirely owing to resumption of dredging operations, but the total was only 4 percent of the all-time record set in 1940, according to Alfred L. Ransome, of the United States Department of the Interior, Bureau of Mines. Silver production was down to half the 1944 output and was the lowest since 1932.

The production of gold from Oregon ores and gravels in 1945 was 4,467 fine ounces, valued at $156,345, compared with 1,369 ounces

valued at $47,915 in 1944. The leading Oregon gold producer in 1945, the Sumpter Valley Dredging Co., produced over half of the State output. Placer mines produced 89 percent of the gold and lode mines 11 percent, thus reverting to the general condition of many years' standing, before 1943, in which placers had been the principal source of gold. Connected-bucket dredge operations, inactive since 1942, accounted for 94 percent of the placer gold and 84 percent of the total gold produced in Oregon in 1945. The remaining 6 percent of placer gold was recovered by hydraulicking and small scale hand methods. All of the lode gold came from dry and siliceous ores, most of which were valued principally for gold. Metallurgical data show that 53 percent of Oregon lode gold was recovered by direct smelting of ore, 21 percent as bullion by amalgamation of ore, 17 percent as bullion by cyanidation of ore, and 9 prcent by smelting of flotation concentrates.

Oregon ores, and gravels in 1945 yielded 10,461 fine ounces of silver valued at $7,439 compared with 20,243 ounces valued at $14,395 in 1944. Jefferson County again, as in 1944, supplied over 80 percent of the State total, dry silver ore was the principal source, and smelting of ore the principal method of recovery. The Oregon King mine, Ashwood district, Jefferson County was the principal source of silver in the State in 1945 as in 1944, 1943, and 1942.

SOUTH DAKOTA

South Dakota gold production in 1945 amounted to 55,948 fine ounces valued at $1,958,180 compared with 11,621 ounces valued at $406,735 in 1944, according to George E. Woodward and S. A. Gustavson of the United States Department of the Interior, Bureau of Mines.

Lode gold mining, the principal source of mineral revenue in South Dakota, was at a standstill in 1945 until War Production Board Limitation Order L–208 was rescinded, effective July 1, 1945. With the lifting of this restriction, the Homestake Mining Co. and the Bald Mountain Mining Co., both in Lawrence County, resumed operations. Neither company, however, was able to reach full-scale operations during the year due chiefly to a shortage of labor.

Operations by the Homestake Mining Co. were resumed July 2, 1945, after being suspended except for maintenance work since June 8, 1943 (the last ore was hoisted from the mine May 26, 1943). Operation of the mill units was begun July 9, and the first bullion produced was shipped August 8, 1945. An average of 1,700 tons of ore per day was treated during the remainder of the year—capacity of the plant is about 3,900 tons a day.

The Bald Mountain Mining Co. began rehabilitation of its properties at Trojan on July 1, 1945, and began milling operations September 20, 1945. An average of 134 tons of ore per day was treated during the remainder of the year.

The output of silver recovered as a byproduct of gold mining in 1945 was 26,564 ounces valued at $18,890. The total production of gold and silver in terms of recovered metal in South Dakota from 1876 through 1945 has been 20,734,054 fie ounces of gold valued at $507,289,099 and 9,601,108 ounces of silver valued at $6,829,842.

TEXAS

Texas mines produced (in terms of recovered metals) 23,265 fine ounces of silver valued at $16,544 in 1945, according to George E. Woodward and S. A. Gustavson of the United States Department of the Interior, Bureau of Mines.

Production of silver for 1944 was 5,355 fine ounces valued at $3,808. No gold has been recovered from ores mined in Texas since 1943. In 1945 four mines accounted for all of the production—three in Hudspeth County and one in Culberson County. The principal silver producer in the State was the Hackberry mine, which supplied 84 percent of the total State output.

The total production of gold and silver (in terms of recovered metals) from 1885 through 1945 has been 8,281 fine ounces of gold valued at $223,780 and 33,225,441 ounces of silver valued at $23,380,380. Most of the silver (30,293,606 ounces) came from the Presidio mine at Shafter, Presidio County. This property ceased operations in September 1942, and soon afterward all equipment at the property was dismantled and sold.

UTAH

The mine production of gold in Utah in 1945 was 279,979 fine ounces (all from lodes), valued at $9,799,265, according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines. This was a decrease of 19 percent from the output of 344,223 ounces in 1944; nevertheless, the State retained its position as the Nation's leading gold-producing State in 1945. Gold mining as such remained at a low level during the year, and over 92 percent of the State total gold was derived from copper ores and zinc-lead ores; most of the remainder came from siliceous gold and silver ores.

The West Mountain (Bingham) district again was the leading gold-producing area in the United States, although its output dropped 20 percent from 312,493 ounces in 1944 to 248,570 ounces in 1945. The Tintic district forged ahead of the Park City region in 1945 to become second to the West Mountain (Bingham) district in gold production. Output rose from 11,417 ounces in 1944 to 14,536 ounces in 1945, a 27 percent gain. The Park City region, ranking third, had a gold output of 13,822 ounces in 1945—9 percent under the output of 15,149 ounces in 1944.

The gold output of the Utah Copper Co. was considerably below that in 1944; however, the company remained the leading gold producer in the United States in 1945. Following the Utah Copper Co. Bingham Canyon pit in State gold output, in the order named, were the United States & Lark group (zinc-lead ore) at Bingham, the New Park property (zinc-lead ore) at Keetley, the Tintic Bullion mine (gold ore) and the Tintic Standard property (gold-silver ore and lead ore) in the Tintic district, the Niagara mine (zinc-lead ore) in the West Mountain district, the Eureka Lilly mine (gold-silver ore) in the Tintic district, the Boston Consolidated property (copper ore) and the National Tunnel & Mines Co. (copper ore and zinc-lead ore) in the West Mountain district, and the Calumet mine (zinc-lead ore)

in the Rush Valley district. These 10 properties produced 97 percent of the State gold output in 1945.

The total production of gold in Utah, in terms of recovered metal, from 1864 to 1945, inclusive, has been 10,464,445 ounces.

The mine output of silver in Utah in 1945 was 6,106,545 fine ounces, a 20-percent decline from the 7,593,075 ounces produced in 1944. Zinc-lead ore, zinc-ore, and lead ore supplied 51 percent of the State total silver in 1945, followed by copper ore, 34 percent, and siliceous gold and silver ores, 15 percent.

The West Mountain (Bingham) district, the leading silver-producing area in the State, supplied 59 percent of the State output, but production dropped from 4,671,478 ounces in 1944 to 3,628,229 ounces in 1945. The Tintic district, ranking second, increased its output from 1,070,214 ounces in 1944 to 1,086,435 ounces in 1945. In the Park City region, the third leading silver-producing area in the State, output dropped 28 percent from 1,429,650 ounces in 1944 to 1,033,830 ounces in 1945.

The Utah Copper Co.'s Bingham Canyon open-pit remained the leading silver producer in the State in 1945, but its output was nearly half a million ounces less than in 1944. It was followed by the United States & Lark property, which also showed a loss of nearly half a million ounces from 1944. Other important silver producers in order of output were the Tintic Standard, New Park, Park Utah Consolidated, Silver King Coalition, Chief Consolidated, Calumet, Godiva, and Butterfield properties. These 10 properties furnished 89 percent of the State total silver in 1945.

The total production of silver in Utah, in terms of recovered metal, from 1864 to 1945, inclusive, has been 715,054,066 ounces.

WASHINGTON

The mine production of gold in Washington in 1945 was 57,860 fine ounces, valued at $2,025,100; lode mines yielded 57,846 fine ounces ($2,024,610) and placer mines 14 fine ounces ($490), according to C. E. Needham and Paul Luff of the United States Department of the Interior, Bureau of Mines.

The gain of over 10,000 ounces (22 percent), compared with the output of 1944, resulted largely from a greater output of gold from the Holden property of the Howe Sound Co. in Chelan County, which remained the State leading gold producer. Although the tonnage of zinc-copper ore from this mine dropped 19 percent from 1944, the average gold content of the ore increased enough in 1945 more than to offset the loss in quantity of ore mined. The only other important gold producer during the year was the Knob Hill mine (gold ore) in Ferry County, which showed increased activity following the revocation, effective July 1, 1945, of War Production Board Order L–208, but failed to equal its 1944 output by about 2,000 ounces. These two mines produced 97 percent of the State total output of gold in 1945. Almost 70 percent of the State total gold was derived from zinc-copper ore, and nearly all the remainder from siliceous gold ore.

The total production of gold in Washington, in terms of recovered metal, from 1860 to 1945, inclusive, has been 2,127,502 ounces.

The mine output of silver in Washington in 1945 was 281,444 fine ounces, a 12-percent decrease from the yield of 321,608 ounces in

1944. The silver produced was entirely a byproduct of gold and base-metal ores.

As with gold, the two leading silver producers were the Holden and Knob Hill mines, which together furnished nearly 82 percent of the State total. The Kaaba mine in Okanogan County contributed an additional 9 percent, but its output in 1945 was only half that in 1944.

Zinc-copper ore advanced to first place in 1945 as a source of silver, supplying 43 percent of the State total; gold ore dropped to a close second with 42 percent, followed by zinc-lead ore with 14 percent. Placers yielded no silver in 1945.

The total production of silver in Washington, in terms of recovered metal, from 1860 to 1945, inclusive, has been 12,565,420 ounces.

WYOMING

Two Wyoming mines accounted for the total State output of gold and silver in 1945, which amounted to 2 fine ounces of gold valued at $70 and 31 ounces of silver valued at $22, according to George E. Woodward and S. A. Gustavson of the United States Department of the Interior, Bureau of Mines. The total production of gold and silver (in terms of recovered metals) from Wyoming mines from 1867 through 1945 has been 77,936 fine ounces of gold valued at $1,836,088 and 74,666 ounces of silver valued at $51,776. There was no placer production of gold or silver during 1945.

Distribution of gold and silver production of the United States, in fine ounces, for 1945, by sources of production (table furnished by the Bureau of Mines)

State	Gold			Silver		
	Lode mines	Placer mines		Dry and siliceous ores [1]	Lead ores [2]	Copper ores
		Floating connected-bucket dredges	All other			
Alabama	5			1

Total	769,909	154,472	30,191	7,075,276	12,825,809	9,123,112

[1] Contain small quantity of silver from placer mines (20,398 fine ounces).
[2] Includes silver in lead, lead-copper, zinc, zinc-lead, zinc-copper, and zinc-lead-copper ores.
[3] Includes silver from galena concentrates, a byproduct of fluorspar mining.
[4] From copper concentrates from magnetite-pyrite-chalcopyrite ores.

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations, prior to the fiscal year 1940, the receipt. classification item of "Domestic refinery bullion" included that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that worked only old materials. Beginning with the fiscal year 1940 segregation of these items has been made in the tabulations.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial use; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such; any unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, considering only coins of the type commonly in circulation, the amounts coined, and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as

used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

[1] For deposits by separate fiscal years 1873–1944, see annual Report for 1944, p. 52.
[2] Gold on quantity basis with value calculated at $20.67+ per fine ounce until 1934, and at $35 thereafter.
[3] Includes gold and silver domestic refinery product from foreign ores, etc. prior to fiscal year 1940. Also silver for 1934–36 includes refined bars (of whatever production source) received under executive Proclamation of Aug. 9, 1934 (nationalized silver).
[4] Includes unfit silver dollars melted under authority of act of Dec. 18, 1942, beginning April 1943.
[5] Foreign silver bullion includes imported bars (whether foreign or domestic bullion previously exported) acquired under Silver Purchase Act of June 19, 1934.

The Mint issue of fine gold bars for the industrial arts, by months, is given below for the calendar years 1944 and 1945:

Month	Value of gold bars issued		Month	Value of gold bars issued	
	1944	1945		1944	1945
January	$1,896,452.83	$6,146,676.37	August	$3,029,877.65	$7,311,052.36

Coinage by the United States Mints for other countries, calendar year 1945

During the calendar year 1945, the United States mints broke all records for the manufacture of foreign coins. The coinage for other countries totaled 1,802,284,798 pieces as compared with 788,498,000 pieces during the prior calendar year.

The coinage by countries, denominations, composition, and mint institutions was as follows:

Country and denomination	Composition	Philadelphia	Denver	San Francisco	Total pieces
Dominican Republic: 5 centavos	35 silver-56 copper-9 manganese.	2,000,000	----------	----------	2,000,000
El Salvador:					
1 centavo	95 copper-5 zinc	5,000,000	----------	----------	5,000,000
25 centavos	900 silver-100 copper	----------	----------	1,000,000	1,000,000
Total, El Salvador coinage	----------	----------	----------	----------	6,000,000
Ethiopia:					
1 cent	95 copper-5 zinc	12,000,000	----------	----------	12,000,000
5 cents	do	12,838,000	----------	----------	12,838,000

[1] For separate fiscal year data prior to 1930, see Annual Report for 1931, p. 72.
[2] Includes silver dollars melted for subsidiary coin under act of Apr. 23, 1918: $1,000,000 in 1919; $10,000,000 in 1920; and $111,168 in 1921.
[3] Includes unfit silver dollars melted for recoinage into subsidiary coin under act of Dec. 18, 1942: $8,080,739 in 1943; $44,658,194 in 1944; $393,881 in 1945; $96,455 in 1946.
[4] In 1944, gain on silver dollars, $1,171,538; loss on subsidiary coin, $141,090.
[5] In 1945 gain on silver dollar, $8,503; loss on subsidiary coin, $257,597.

Minor coins outstanding

Minor coins were first manufactured at the Philadelphia Mint in 1793, at the San Francisco Mint in 1908, and at the Denver Mint in 1911.

During the fiscal year 1946 1-cent coins were minted of 95 percent copper and 5 percent zinc. Five-cent coins minted the first half of the fiscal year were composed of 56 percent copper, 35 percent silver and 9 percent manganese; the last half of the fiscal year of the former alloy of 25 percent nickel and 75 percent copper.

The following statement shows the coinage of minor coins, by denomination and composition, the amount on hand at the mints, the amount issued, melted, and outstanding on June 30, 1946:

Denomination and composition	Total coined	On hand at mints unissued	Issued	Melted	Issued amount outstanding June 30, 1946
Half cents, copper [1]	$39,909.11		$39,909.11	$2.47	$39,906.64
Cents:					
Copper	1,562,887.44		1,562,887.44	383,793.14	1,179,094.30
Nickel-copper	2,007,720.00		2,007,720.00	809,229.74	1,198,490.26
Bronze and copper-zinc	145,705,720.98	$424,015.00	145,281,705.98	2,254,397.74	143,027,308.24
Zinc-coated steel	10,938,386.70		10,938,386.70	14,048.71	10,924,337.99
2 cents, bronze	912,020.00		912,020.00	344,229.82	567,790.18
3 cents, nickel-copper	941,349.48		941,349.48	288,070.71	653,278.77
5 cents:					
Nickel-copper	140,725,016.60	608,400.00	140,116,616.60	12,570,236.86	127,546,379.74
Copper-silver-manganese	43,496,185.00	[2]1,969,100.00	[2]41,624,085.00	26,556.90	41,500,528.10
Total	346,329,195.31	[2]3,001,515.00	[2]343,424,680.31	16,690,566.09	326,637,114.22

[1] There is no record of the earlier melting of old copper half cents, but it is believed that few, if any, are now in circulation.
[2] Includes $97,000 copper-silver-manganese 5-cent coins previously issued and returned to stock.

Stock of coin in the United States Dec. 31, 1945	1,350,875,431	317,386,695	1,668,262,126

[1] Not adjusted for imports.

NOTE.—The number of standard silver dollars coined from 1878 to date was 847,629,915, which added to Hawaiian dollar coinage, 500,000 plus the number imported from the Philippine Islands, 150,000 and the number returned in Government transports, 496,859 equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000; the net export from November 1919 to July 1920 in movement due to the high price of silver was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, total 270,232,722; unfit melted under act of Dec. 18, 1942, total 53,132,814, those melted otherwise (mutilated, etc.) since 1883 numbered 230,980 and the number of Hawaiian dollars melted to date was 455,329; a total disposition of 354,833,987, leaving in the United States on Dec. 31, 1945, 493,942,783 standard silver dollars and 856,932,648 dollars in subsidiary silver coin.

[1] For annual prices 1833–1943, see Annual Report for 1944, p. 88; for price for 1944, see Annual Report for 1945, p. 77.

[2] Bullion quotations in the London market changed from 0.925 fine to 0.999 fine on Jan. 2, 1945.

SUMMARY OF SILVER RECEIPTS AND ISSUES, FISCAL YEARS 1932 TO 1946, INCLUSIVE

This summary has been compiled for the purpose of making available, in one place, a series of tables showing silver receipts and issues during the 15-year period from June 30, 1931, to June 30, 1946. There was considerable activity in silver operations during this period; new laws relating to silver were enacted and use of the metal for coinage and other purposes reached unprecedented amounts. A comprehensive discussion of the Treasury's silver policy is beyond the scope of this review, the statistics here presented being only for the purpose of summarizing receipts and issues of silver during the period stated above.

Summary of silver receipts, issues and balances, fiscal years 1932 to 1946

		Number of fine ounces
Silver on hand at beginning of fiscal year 1932		16, 323, 704
Add receipts during fiscal years 1932 to 1946, incl:[1]		
Newly mined domestic silver	507, 210, 428	
Purchase Act silver	2, 045, 231, 408	
Foreign Debt silver	22, 734, 824	
Nationalized silver	113, 032, 916	
Silver bullion in exchange for Government stamped bars	7, 846, 363	
Silver bullion ordinary	8, 699, 567	
Recoinage bullion from uncurrent subsidiary coin	49, 821, 424	
Recoinage bullion from uncurrent silver dollars	39, 498, 005	
		2, 794, 074, 935
Total silver available during period		2, 810, 398, 639
Deduct issues during fiscal years 1932 to 1946, incl:[1]		
Silver processed into United States coin	521, 948, 248	
Silver bar payment in exchange for bullion	7, 846, 363	
Silver lend-leased to foreign governments	410, 814, 344	
Silver sold for industrial and monetary use	172, 080, 118	
Silver sold in sweeps, operative losses, etc	1, 722, 121	
		1, 114, 411, 194
Balance as of June 30, 1946:		
Silver bullion monetized to secure silver certificates	1, 476, 568, 375	
Silver bullion held at cost value	218, 984, 960	
Silver bullion held at recoinage value	434, 110	
		1, 695, 987, 445

[1] NOTE.—See following pages for detailed break-down of receipts and issues by fiscal years.

1946	1,289,067		
Total	507,210,428	2,045,231,408	22,734,824

[1] *Newly mined domestic silver.*—This class of silver represents that received from mines of the United States and Territories. The mints and assay offices purchased newly mined domestic silver offered in accordance with the Executive Proclamation of Dec. 21, 1933 at 64.64+ cents per fine ounce until Apr. 9, 1935; under subsequent proclamations at 71.11+ cents between Apr. 9, 1935, and Apr. 23, 1935; at 77.57+ cents between Apr. 24, 1935, and Dec. 31, 1937; and at 64.64+ cents between Jan. 1, 1938, and June 30, 1939. From July 1, 1939, through June 30, 1946, newly mined domestic silver was purchased at 71.11+ cents per fine ounce as directed by the act of July 6, 1939.

[2] *Purchase Act silver.*—Silver acquired under the Silver Purchase Act of June 19, 1934, was purchased at varying rates from foreign sources by the Federal Reserve Bank of New York as fiscal agent of the Secretary of the Treasury, and transferred by the bank to mint institutions.

[3] *Foreign debt silver.*—Title III of the Agricultural Adjustment Act of May 12, 1933, authorized for the ensuing 6 months the acceptance of silver tendered by foreign governments in payment of indebtedness due the United States Government. The act specified that the silver was to be valued at not in excess of 50 cents per ounce. Under this authority 22,734,824 fine ounces of silver valued at $11,367,412 were received at the New York Assay Office and San Francisco Mint during the months of July, August, and October 1933. Countries making payment in silver were: Czechoslovakia, 359,010 ounces; Finland, 296,632 ounces; Great Britain, 20,001,037 ounces; Italy, 2,000,041 ounces; Lithuania, 19,981 ounces; and Rumania, 58,123 ounces.

[4] *Nationalized silver.*—The Executive order of Aug. 9, 1934, which was issued under powers contained in the Silver Purchase Act of 1934, required that silver situated in the continental United States (other than newly mined domestic), with certain stipulations, be delivered to the United States mints. Depositors were paid 50.01 cents per fine ounce for silver delivered under this order, which was revoked on Apr. 28, 1938.

[5] *Silver bullion in exchange for Government-stamped bars.*—This silver was received from depositors in exchange for refined bars bearing the official stamp of a mint or assay office.

[6] *Silver bullion ordinary.*—Consists of miscellaneous silver, and at present includes silver contained in gold deposits, mutilated United States coins, and bullion recovered in melting, refining, and coining processes. Prior to the acquisition of silver under classification of Newly Mined Domestic, Purchase Act, Foreign Debt and Nationalized silver, all silver purchased by the mints and assay offices was termed "ordinary." The figures for this class of silver for the fiscal years 1932 and 1933 are therefore not strictly comparable to figures for subsequent years. This bullion is purchased at prices set by the Director of the Mint, with the approval of the Secretary of the Treasury and usually approximate the price of silver in the New York bullion market.

[7] *Recoinage bullion from subsidiary coin.*—United States subsidiary silver coin which becomes too worn to remain in circulation is returned to the mints by the Federal Reserve banks and by the Treasurer's office in Washington. Such coin, termed "uncurrent," is exchanged at full value and is to be distinguished from "mutilated" coin which is purchased at bullion value. Uncurrent coin is melted, alloyed with copper to bring it to the proper coinage standard, and recoined.

[8] *Recoinage bullion from uncurrent silver dollars.*—Until the fiscal year 1943 there was no legislation which permitted uncurrent standard silver dollars to be melted and recoined as in the case of subsidiary coin. Consequently, there was an accumulation in the mint vaults of dollar coins unfit for circulation which had been returned over a period of years by the Federal Reserve Banks and Treasury offices. The act of Dec. 18, 1942, contained a provision which permitted the mints to melt such coin and to recoin it into subsidiary silver coin. In addition to providing the mints with space in vaults occupied by the uncurrent dollars, there was provided an additional source of copper alloy for coinage, at a time when copper was a strategic metal needed for war purposes.

Coinage of subsidiary silver coin, fiscal years 1932–46 [1]

Fiscal year	Number of pieces coined	Face value	Number of fine ounces of silver consumed
1932	5,606,000	$803,000	580,870

Total	3,501,519,043	646,320,979	467,532,436

[1] Includes half dollars, quarter dollars, and dimes.

Silver in 5-cent coinage fiscal years 1932–46 [1]

Fiscal year	Number of pieces coined	Face value	Number of fine ounces of silver consumed
1943	306,084,600	$15,304,230	17,221,086
1944	253,630,000	12,681,500	14,269,858
1945	155,627,100	7,781,355	8,755,970
1946	154,582,000	7,729,100	8,697,170
Total	869,923,700	43,496,185	48,944,084

[1] The 5-cent coin, popularly known as the "nickel," is normally composed of 75 percent copper and 25 percent nickel. During the war period, however, these metals were needed for war production and it became necessary for the mints to employ different alloys. The Second War Powers Act of Mar. 27, 1942, authorized the use of silver in the 5-cent denomination. The standard weight of the coin remained at 77.16 grains and the alloy adopted was composed of 35 percent silver, 56 percent copper and 9 percent manganese. This alloy was used only from Oct. 1, 1942 to Dec. 31, 1945, after which the regular cupro-nickel alloy was resumed.

Coinage of standard silver dollars, fiscal years 1932–46 [1]

Fiscal year	Number of dollars coined	Number of fine ounces of silver consumed
1935	5,635,557	4,358,751
1936	1,439,000	1,112,977
Total	7,074,557	5,471,728

[1] Silver dollars were coined only during the fiscal years 1935 and 1936.

Recapitulation of all coinage, fiscal years 1932–46

Denomination	Number of pieces coined	Number of fine ounces of silver consumed
Subsidiary silver coins	3,501,519,043	467,532,436
Silver-copper-manganese 5¢ coins	869,923,700	48,944,084
Standard silver dollars	7,074,557	5,471,728

[1] The Green Act authorizing sale of Treasury silver was passed July 12, 1943, effective first through Dec. 31, 1944, and later amended to extend through the calendar year 1945. Each sale was made at 71.11+cents per fine ounce, in accordance with War Production Board (or Civilian Production Administration) priorities.

[2] Includes silver sold for Philippine coinage as follows: October 1944, 7,860,857 ounces; March 1945, 3,544,619 ounces; April 1945, 4,340,350 ounces; October 1945, 5,000,000 ounces; and December, 6,000,000 ounces; total 26,745,826 ounces.

Sales of silver bullion ordinary for industrial use, fiscal year 1943 [1]

Month and year	Number of fine ounces
October 1942	1, 017, 741
January 1943	99, 877
March 1943	1, 982, 259
April 1943	1, 600, 000
Grand total	4, 699, 877

[1] No special legislation was obtained for sales from "ordinary" stock which occurred during the fiscal year 1943 prior to passage of the Green Act. Sales were at 45+ cents per fine ounce.

Location of stock of Treasury silver on June 30, 1946

Location	Number of fine ounces
Philadelphia Mint	75, 892, 984
San Francisco Mint	487, 305, 995
Denver Mint	19, 529, 145
New York Assay Office	62, 822, 340
Seattle Assay Office	18, 760
West Point Depository	172, 703, 046
Office of Defense Plants of RFC, etc.[1]	877, 715, 175
Total silver	1, 695, 987, 445

[1] The largest amount held by the Defense Plant Corporation, etc., during the war period was 902,622,278 fine ounces. As of June 30, 1946, 24,907,103 fine ounces had been returned leaving a balance of 877,715,175 ounces still in possession of the Defense Plant Corporation, etc.

Value of Treasury stock of bullion on June 30, 1946

Item	Number of fine ounces	Value
Bullion securing silver certificates	1, 476, 568, 375	$1, 909, 098, 500
Cost bullion	218, 984, 960	102, 348, 779
Recoinage bullion	434, 110	596, 173
Total Treasury stock	1, 695, 987, 445	2, 012, 043, 452

Break-down by classes, of Treasury stock of silver at cost and recoinage value on June 30, 1946

Class of silver bullion	Number of fine ounces
Newly mined domestic	
Purchase Act	653, 106
Ordinary	217, 632, 366
Recoinage:	699, 488
From uncurrent subsidiary coin	390, 020
From uncurrent silver dollars	44, 090
Total	219, 419, 070

Silver bullion revalued from cost to monetary value as security for silver certificates 1935–46 [1]

Fiscal year [1]	Number of fine ounces of bullion monetized	Monetary value
1934	1,206,563	$1,560,000
1935	241,118,262	311,748,863
1936	305,432,000	394,901,979
1937	98,215,000	126,985,050
1938	156,209,171	201,967,413
1939	149,600,000	193,422,222
1940	94,805,000	122,576,161
1941	64,000,000	82,747,475
1942	54,090,000	69,934,545
1943	10,752,379	13,902,066
1944	300,000	387,878
1945	125,000	161,616
1946	300,715,000	388,803,232
Total	1,476,568,375	1,909,098,500

[1] Silver bullion was first monetized as security for silver certificates in January 1934 under act of May 12, 1933.

WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are often incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries the most reliable data available are used in compiling world statistics.

A number of countries are omitted from the tables because of complete lack of information.

In connection with the table *"Monetary stock of principal countries of the world, end of calendar year 1945"*—the following general qualifications should be taken in consideration:

Gold stocks.—It is understood that material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies, and those hoarded or held outside regularly reported stocks. Additional explanatory notes relating to the various countries follow the table.

Silver stocks.—The amount of silver in circulation in many countries is not obtainable.

Population estimates, chiefly from the *International Statistical Year Book, League of Nations, 1942–44*, do not all relate to the same period.

*Monetary stock of principal countries of the world at end of calendar year 1945 (subject to revision)**

[Stated in United States money (000 omitted), except paper circulation which is stated in monetary unit of issuing country (000 omitted). Population 000 omitted. 1 U. S. dollar=15 5/21 grains of gold 9/10 fine; that is an ounce of fine gold=$35]

Country	Monetary unit			Gold stock conversions to United States equivalent at legal parity, except as otherwise indicated in notes at end of table			Monetary silver stock in government treasuries, banks and in circulation (United States equivalent, of reported face amount at current exchange rate)	Notes in circulation in monetary unit of issuing country [See col. *See explanatory notes preceding and following table.

Notes to table "Monetary stock of principal countries of the world at end of calendar year 1945"

---

[1] *Canada.*—Includes gold held by Foreign Exchange Control Board.
[2] *Newfoundland and Labrador.*—Canadian currency legal tender. Amount in circulation not available.
[3] *Costa Rica.*—Gold valued at 5.61 colones per United States dollar.
[4] *Cuba.*—Cuban and United States money.
[5] *Dominican Republic.*—Silver coin, Dominican and United States. Notes, United States; amount in circulation not available.
[6] *El Salvador, Martinique, Nicaragua, Paraguay, Surinam.*—Gold converted at current exchange rate.
[7] *Haiti.*—United States money also circulates.
[8] *Honduras.*—Silver coin, Honduran and United States. Notes, United States, converted at rate of 2 lempira per dollar.
[9] *Netherlands West Indies.*— Fine ounces of gold converted at $35 per ounce.
[10] *Panama.*—United States money chief circulating medium, amount in circulation not available.
[11] *Argentina.*—Gold valued at rate of 0.29289 gram per paper peso.
[12] *Bolivia.*—Gold valued at 46 bolivianos per United States dollar.
[13] *Brazil, Ecuador.*—Grams of gold converted at $1.125+ per gram.
[14] *Paraguay, Peru.*—Notes include coin.
[15] *Peru.*—Gold valued partly at legal and partly at market rate.
[16] *Venezuela.*—Silver includes nickel coin.
[17] *Belgium.*—Gold valued at 49,145 francs per kilogram fine.
[18] *Belgium, Netherlands, Sweden, British India.*—Silver includes only coin in Central Bank. Amount in circulation not available.
[19] *Bulgaria.*—Includes bank notes, coin, and Treasury bonds which circulate as legal tender.
[20] *Czechoslovakia.*—Gold valued at rate of 0.03584 gram per koruna.
[21] *Eire.*—Gold valued at rate of 172 shillings 3 pence per fine ounce.
[22] *Finland.*—Gold valued at 135,000 markka per fine kilogram.
[23] *France.*—Gold valued at rate of 134,027.90 francs per kilogram fine. Excludes gold held by Exchange Stabilization Fund.
[24] *Greece.*—Gold valued at rate of 2,000 drachmas per pound sterling. Notes represent new drachma currency (1 new drachma equals 50 billion old drachmas).
[25] *Hungary.*—The monetary unit, pengö, was replaced in June 1946 by a new unit, the forint, based on 13,210 forint per kilogram fine gold. Gold, kilograms fine converted at $1,125.27+.
[26] *Netherlands.*—Gold valued at 2,970 florin per kilogram fine.
[27] *Portugal.*—Gold valued at market rate.
[28] *Rumania.*—Gold valued on basis of 0.00474 gram fine per leu.
[29] *Spain.*—Gold valued at 0.290322 gram fine per gold peseta (1 gold peseta equals 3.5770 paper pesetas).
[30] *Switzerland.*—Gold valued at 0.20535 gram fine per franc.
[31] *United Kingdom.*—Gold, valued at 172 shillings 3 pence per fine ounce. Does not include gold held in Exchange Equalization Account. Silver, estimated amount of Imperial silver coin in circulation in British Isles.
[32] *Iran.*—Gold valued on basis of 32.50 rials per United States dollar.
[33] *Turkey.*—Gold in metric tons converted at $1,125,276.
[34] *Union of South Africa.*—Includes coin and currency in circulation in Basutoland, Bechuanaland, South West Africa, and Swaziland.

Coinage of nations (exclusive of minor coinage) during the calendar year 1945 [1]

[So far as reported to the Director of the United States Mint]

Country	Monetary unit of issuing country	Silver coinage

[a] Does not include gold other than that held by the Treasury.

[b] These amounts are not included in the total, since the gold or silver held as security against gold and silver certificates and Treasury notes of 1890 is included under gold, standard silver dollars, and silver bullion, respectively.

[c] This total includes credits with the Treasurer of the United States payable in gold certificates in (1) the Gold Certificate Fund-Board of Governors, Federal Reserve System, in the amount of $14,247,119,682, and (2) the redemption fund for Federal Reserve notes in the amount of $800,358,626.

[d] Includes $1,800,000,000 Exchange Stabilization Fund.

[e] Includes $147,000,000 lawful money deposited as a reserve for Postal Savings deposits.

[f] The amount of gold and silver certificates and Treasury notes of 1890 should be deducted from this amount before combining with total money held in the Treasury to arrive at the total amount of money in the United States.

[g] The money in circulation includes any paper currency held outside the continental limits of the United States.

NOTE.—There is maintained in the Treasury—(i) as a reserve for United States notes and Treasury notes of 1890—$156,039,431 in gold bullion; (ii) as security for Treasury notes of 1890—an equal dollar amount in standard silver dollars (these notes are being canceled and retired on receipt); (iii) as security for outstanding silver certificates—silver in bullion and standard silver dollars of a monetary value equal to the face amount of such silver certificates; and (iv) as security for gold certificates—gold bullion of a value at the legal standard equal to the face amount of such gold certificates. Federal Reserve notes are obligations of the United States and a first lien on all the assets of the issuing Federal Reserve Bank. Federal Reserve notes are secured by the deposit by the Federal Reserve Bank concerned, with its Federal Reserve Agent, of a like amount of collateral consisting of such discounted or purchased paper as is eligible under the terms of the Federal Reserve Act, or gold certificates, or direct obligations of the United States. Each Federal Reserve Bank must maintain reserves in gold certificates of not less than 25 percent against its Federal Reserve notes in actual circulation. Gold certificates deposited with Federal Reserve Agents as collateral, and those deposited with the Treasurer of the United States as a redemption fund, are counted as part of the required reserve. "Gold certificates" as herein used includes credits with the Treasurer of the United States payable in gold certificates. Federal Reserve bank notes and National bank notes are in process of retirement.

REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1944

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 1, 1944:

SIR: In compliance with the provisions of section 253, title 31, United States Code, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1944, being the Seventy-second Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1943.

OPERATION OF THE MINTS, ASSAY OFFICES, AND BULLION DEPOSITORIES

Institutions of the Mint Service

During the fiscal year ended June 30, 1944, six mint institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which handles the major portion of the gold imported and exported, and its auxiliary silver bullion depository at West Point; gold bullion depository at Fort Knox, Ky.; and assay office at Seattle. Electrolytic refineries are maintained at the New York, Denver, and San Francisco institutions.

Coinage

Domestic coin manufactured during the fiscal year ended June 30, 1944, amounted to the record production of 2,578,640,270 pieces, compared with 1,472,098,762 pieces during the preceding year. As in previous years, the denomination most largely produced was the 1-cent piece. Production in 1944, in amount $109,464,836.70, consisted of 406,356,600 subsidiary silver coins, value, $77,596,800.00; 253,630,000 5-cent coins, value, $12,681,500.00; and 1,918,653,670 1-cent coins, value, $19,186,536.70, of which 898,686,670 coins were of zinc-coated steel and 1,019,967,000 were of copper-zinc.

Coinage for foreign governments totaled 487,847,000 pieces, compared with 173,023,000 during the preceding year.

The grand total of domestic and foreign coinage in 1944 amounted to 3,066,487,270 pieces, which was an increase in domestic coinage over the prior fiscal year of 1,106,541,508 pieces, or 75 percent, and an increase in foreign coinage of 314,824,000 pieces, or 182 percent. The weight of the finished coins was 12,354.31 tons, or an average production of 35 tons per day.

Minor Coinage Alloys

Five-cent coin.—The 5-cent piece issued under authority of the Second War Powers Act, approved March 27, 1942, was coined during the fiscal year 1944. The composition is an alloy of 56 percent copper, 35 percent silver, and 9 percent manganese, and its standard weight is 77.16 grains. No 5-cent pieces containing 75 percent copper and 25 percent nickel have been coined since May 1942.

One-cent coin.—Production of the zinc-coated steel cent was discontinued December 31, 1943. The total number of zinc-coated steel coins struck from the beginning of production in February 1943 to their discontinuance December 31, 1943, was 1,093,838,670 pieces, value, $10,938,386.70. Beginning January 1, 1944, production of a copper-zinc coin was commenced, the composition of the alloy being 95 percent copper and 5 percent zinc. This was done under authority of the order of the Acting Secretary of the Treasury, filed with the Federal Register December 15, 1943, pursuant to the act of December 18, 1942, Public Law No. 815, Seventy-seventh Congress. The change was made as a result of the availability of fired brass cartridge cases, to which copper is added to produce the alloy. The standard weight of the coin is 48 grains, the same as the former bronze 1-cent coin.

Metal savings.—The production of the copper-silver-manganese 5-cent piece and the zinc-coated steel 1-cent piece during the fiscal year 1944 freed 3,194 tons of copper, 350 tons of nickel, and 120 tons of zinc for use in furtherance of the war effort.

Bullion Deposit Transactions

Bullion deposit transactions during the year numbered 7,492, including 53 intermint service transactions, compared with 15,406 and 99, respectively, during the prior year. The deposit transactions required 14,022 assay determinations, compared with 23,019 assay determinations last year.

Long-Term Storage of Bullion

There were no transfers of bullion for long-term storage during the fiscal year 1944. Withdrawals from bullion depositories were as follows: Because of increased sales of gold bars for industrial consumption and the large amounts of gold used for earmarking purposes, it became necessary to transfer 29,625,700 fine ounces of gold with a value of $1,036,899,495 from the Bullion Depository at Fort Knox to the New York Assay Office.

The balance of silver in the Bullion Depository at West Point was also decreased by removal of silver for sales under the terms of the Green Act (Public Law 137, 78th Cong., approved July 12, 1943) and for lend-lease transactions. During the year 40,791,567 ounces of silver were sold under the Green Act and 211,359,650 ounces were lend-leased. The New York Assay Office manufactured coinage ingots containing 11,063,000 fine ounces of silver which were transferred to the Philadelphia Mint for use in domestic subsidiary silver coinage.

Additional amounts of silver were removed from West Point for use in defense plants. The total amount of silver loaned for that purpose to Defense Plant Corporation, etc., amounted to 891,792,971

fine ounces on June 30, 1944, as compared to 699,819,332 fine ounces on June 30, 1943. This silver is to be returned to Treasury custody after it has performed its function.

The balance of silver in the Bullion Depository at West Point amounted to 513,706,973 fine ounces on June 30, 1944.

Gold Operations

Gold acquisitions by the mints and assay offices during the year, on the basis of classified melted receipts, amounted to $58,524,200.77 and transfers between mint-service institutions amounted to $1,040,831,947.20. These transactions totaled $1,099,356,147.97, compared with $208,006,481.87 for the prior year which included $19,871,516.21 in intermint transfers.

Acquisitions in 1944 included $10,764.13 of gold received at $20.67+ per fine ounce. Increment on this gold amounted to $7,459.44.

Silver Operations

Treasury silver acquisitions during the year totaled 12,042,027.25 fine ounces. The total value, at an average of $0.478 per fine ounce, equalled $5,757,512.53. Acquisitions were as follows:

Item	Amount (fine ounces)	Value
Newly mined domestic silver	861,293.90	$550,312.71
Silver contained in gold bullion deposits, etc	120,175.74	51,773.04
Silver received in exchange for Government stamped bars	231,250.14	101,749.96
Redeposits	10,829,307.47	5,053,676.82
Total	12,042,027.25	5,757,512.53

United States coin received for recoinage during the year amounted to 1,127,651.70 fine ounces, with a recoinage value of $1,558,875.67. Also, unfit silver dollars with a face value of $44,658,194 were melted, yielding 33,152,082.31 fine ounces of silver.

Transfers of silver between mint institutions amounted to 9,109,409.72 fine ounces, and foreign governments deposited 58,581,355.97 ounces of silver for foreign coinage, making a grand total of silver handled during the year 114,012,526.95 fine ounces.

During the year 1944, $387,878 of silver certificates were issued against 300,000 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. This silver had been acquired at an average price of $0.7111+ per fine ounce. The difference between the cost of the silver held to secure these certificates and the monetary value of such silver is $174,545, and this amount constitutes seigniorage.

The open-market price of silver in New York (mean of bid and asked) remained at $0.45062 throughout the fiscal year.

For newly mined domestic silver a return to the depositor of $0.7111+ per fine ounce, established by the act of July 6, 1939, prevailed during the year.

Refineries

The three electrolytic refineries produced 4,031,631 fine ounces (138 tons) of electrolytically refined gold bullion and 4,385,482 fine ounces

(150 tons) of silver bullion in 1944. During the prior year the quantities produced were 6,225,508 fine ounces (213 tons) of gold and 6,679,864 fine ounces (229 tons) of silver.

Stocks of unrefined gold and silver bullion in mint institutions decreased during the fiscal year 1944 by approximately 282.6 tons, leaving a total of 1,474.43 tons.

Medals

The Medal Division of the Philadelphia Mint manufactured approximately 133,000 Navy service medals during the year, an increase of about 57,000 medals over the previous year. In addition, 50,000 bronze stars and 15,000 gold stars were struck.

Other medals sold during the year were as follows:

Item	Number	Value
Gold medals	27	$4,216.01
Silver medals	390	786.95
Bronze medals	2,470	2,385.10
Total	2,887	7,388.06

Stock of Coin and Monetary Bullion in the United States

On June 30, 1944, the estimated stock of domestic coin in the United States totaled $1,505,218,196, consisting of $494,337,395 standard silver dollars, $734,488,137 subsidiary silver coin, and $276,392,664 minor coin.

The stock of gold bullion, including coin, held by the Treasury on the same date was valued at $21,173,065,544, a decrease of $1,214,456,564 from June 30, 1943. The stock of silver bullion was 2,139,693,743 fine ounces, a decrease of 290,576,279.

Production of Gold and Silver in the United States

Domestic gold production (refinery product) during the calendar year 1943 totaled 1,394,522 fine ounces, with monetary value of $48,808,270, compared with 3,741,806 fine ounces, with monetary value of $130,963,210 in 1942. The largest annual gold production occurred in 1940—6,003,105 fine ounces with monetary value of $210,108,700.

Domestic silver production (refinery product) during the calendar year 1943 totaled 40,820,639 fine ounces, a decrease of 15,270,216 ounces from the 1942 production of 56,090,855. The record silver production of 74,961,075 ounces was in 1915.

Industrial Consumption of Gold and Silver in the United States

Gold consumption in arts and industries during the calendar year 1943 is estimated at $96,864,353. Gold returned from industrial use amounted to $10,521,000, giving a net industrial consumption of new gold during the year of $86,343,353.

Silver used in arts and industries totaled 162,112,863 fine ounces, of which 129,940,686 fine ounces were of new material.

Compared with calendar year 1942, there was an increase in the amount of gold and silver used in industry amounting to 603,482 and 30,693,639 fine ounces, respectively.

Appropriations, Expenses, and Income

Regular appropriations available for the mint service during the fiscal year 1944 totaled $3,934,370, consisting of $150,000, office of Director of the Mint; $5,000, transportation of bullion and coin; $3,771,370, salaries and expenses, mints and assay offices; and $8,000, printing and binding.

Supplemental appropriations provided additional amounts as follows: Under the First Deficiency Appropriation Act, 1944, approved April 1, 1944—$7,000, office of Director of the Mint. Under the First Supplemental National Defense Appropriation Act, 1944, approved December 23, 1943—$7,800, transportation of bullion and coin; and $1,650,000, salaries and expenses, mints and assay offices.

Expenses amounted to $8,239,785, of which $7,901,453 was chargeable to appropriations and $338,332 was chargeable to revenue.

The regular income realized by the Treasury from the mint service during the fiscal year 1944 aggregated $108,100,541, of which $45,796,210 was seigniorage. The seigniorage on subsidiary silver coin was $22,688,274 and on minor coin, $23,107,936. Extraordinary income was $61,705,178 representing profits on sale of silver bullion, and $7,459 increment to $35 per ounce on revalued gold.

General Activities

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1944, and the number of employees on June 30, 1944, at each institution, are shown in the following table:

Gold and silver deposits, income, expenses, and employees, by institutions, fiscal year 1944

Institution	Number of bullion deposit transactions	Number of assay determinations on bullion deposits	Monetary value of gold and silver receipts, including transfers [1]	Gross regular income	Gross expenses	Excess of income (+) or of expenses (−)	Number of employees June 30, 1944
Philadelphia	1,702	3,385	$15,269,211	$33,751,941	$4,694,678	+$29,057,263	1,891

[6] 12 percent and 18 percent nickel-silver, metals furnished by Netherlands Government.

Mint Issue of Fine Gold Bars for Industrial Use

[On value basis; see p. 42]

The value of the fine-gold bars issued for industrial use, in exchange for cash, by the United States Mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1944, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1943:		1944—Continued.	
July	$162,470.05	March	$2,597,217.74
August	481,433.77	April	2,469,142.47
September	700,183.25	May	3,520,206.50
October	1,755,982.84	June	3,670,509.21
November	2,344,370.35		
December	2,477,815.75	Total	24,977,240.48
1944:			
January	1,896,452.83	Prior fiscal year	16,601,298.68
February	2,901,455.72		

Sales of Silver Under the Green Act During the Fiscal Year 1944

Treasury sales of silver for industrial use under terms of the Green Act (Public Law 137—78th Congress, approved July 12, 1943) during the fiscal year 1944, were as follows:

Month	Assay office at New York	Mint at San Francisco	Total
1943:	*Ounces*	*Ounces*	*Ounces*
July	2,003,685.05		2,003,685.05
August	5,610,650.32	19,995.75	5,630,646.07
September	6,249,448.48		6,249,448.48
October	2,890,685.89	10,399.67	2,901,085.56
November	406,101.60	27,499.06	433,600.66
December	3,551,339.99		3,551,339.99
1944:			
January	2,983,629.71		2,983,629.71
February	2,995,639.13		2,995,639.13
March	3,454,033.71		3,454,033.71
April	2,879,046.74	20,000.00	2,899,046.74
May	2,492,179.47		2,492,179.47
June	5,188,225.17	9,007.00	5,197,232.17
Total	40,704,665.26	86,901.48	40,791,566.74

Lend-Lease Silver

Details on lend-lease silver by the United States to foreign Governments during the fiscal year 1944 are shown in the table below:

Date	Country	Mint office	Total ounces
1943:			
August	United Kingdom	New York	11,998,880.93
Do	Netherlands	Philadelphia	581,799.86
Do	Australia	Denver	1,345,455.66

[1] Includes transfers.

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand at the mints, issued, melted, and outstanding June 30, 1944. Minor coins were first manufactured at the Philadelphia Mint in 1793, at the San Francisco Mint in 1908, and at the Denver Mint in 1911.

Item	Total coined	On hand at mints unissued	Issued	Melted	Issued amount outstanding June 30, 1944
Half cents, copper [1]	$39,909.11		$39,909.11	$2.45	$39,906.66
Cents:					
Copper	1,562,887.44		1,562,887.44	383,769.04	1,179,118.40
Copper-nickel	2,007,720.00		2,007,720.00	809,213.23	1,198,506.72
Bronze	115,545,830.98	$3,973,930	111,571,900.98	2,133,686.86	109,438,214.12
Zinc-coated steel	10,938,386.70		10,938,386.70		10,938,386.70
2-cents, bronze	912,020.00		912,020.00	344,206.92	567,813.08
3-cents, nickel-copper	941,349.48		941,349.48	288,055.71	653,293.77
5-cents:					
Nickel-copper	136,322,816.60		136,322,816.60	12,264,099.95	124,058,716.65
Copper-silver-manganese	27,985,730.00	3,914,695	24,071,035.00	2,014.60	24,069,020.40
Total	296,256,680.31	7,888,625	288,368,025.31	16,225,048.81	272,142,976.50

[1] There is no record of the earlier melting of the old copper half cents, but it is believed that few if any, are now in circulation.

Proof Bullion (1,000 fine)

In order to maintain uniformity in assay of bullion in the mint service, all proof gold and proof silver are made at one institution and furnished to other institutions when required. Proof gold is made at the New York Assay Office while proof and inquartation silver are made at the Philadelphia Mint. During the fiscal year 1944 New York and Philadelphia furnished other mints 50 ounces of proof gold, and 250 ounces of proof silver.

Operations of the melting and refining and of the coining departments, fiscal year 1944

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints, and assay office at New York, during the fiscal year ended June 30, 1944, was 9.3 million fine ounces of gold and 436.1 million fine ounces of silver. There were also operated upon at the coinage mints 674.8 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative offices, as prescribed in section 355, title 31, United States Code, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—silver, 0.001.

GOLD BULLION

Institution	Amount received	Amount returned	Amount operated upon, including reworked metal	Legal amount of wastage on amount received	Surplus recovered	Wastage	Wastage per 1,000 ounces operated upon

Wastage of Coinage Metal and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1944, was $107,032.56. A loss of $9,063.59 occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the following table:

Item	Mint at—			Assay office at New York	Total
	Philadelphia	San Francisco	Denver		
Silver wastage: Coining department	$80,356.97	$3,572.87	$733.03		$84,662.87
5-cent coinage wastage:					
Melting and refining department	7,487.15	1,096.08	538.84		9,122.07
Coining department	1,056.03	25.95	46.68		1,128.66
Bronze wastage:					
Melting and refining department	8,991.56	167.68	1,181.68		10,340.92
Coining department	1,258.88	122.29	88.12		1,469.29
Zinc-coated steel coinage wastage: Coining department			308.75		308.75
Loss on sales of sweeps	1,379.37	3,982.30	3,353.90	$348.02	9,063.59
Total wastage and loss	100,529.96	8,967.17	6,251.00	348.02	116,096.15
Reimbursements:					
Silver, departmental wastage offset by other departmental surpluses	59,138.32	3,572.87	733.03		63,444.22
5-cent alloy, bronze, and zinc-coated steel coinage wastage, from minor coinage profits	15,753.15	1,412.00	2,045.18		19,210.33
Bronze wastage, offset by charges to Foreign metals accounts	2,266.27		118.89		2,385.16
Other wastage, and loss on sweeps from appropriations	23,372.22	3,982.30	3,353.90	348.02	31,056.44
Total reimbursements	100,529.96	8,967.17	6,251.00	348.02	116,096.15

Employees

The total number of officers and employees of the mint service on June 30, 1944, was as follows:

*Allotment made from a lump construction appropriation.

Assay Commission's Annual Test of Coin for 1943

Section 363, title 31, United States Code, provides for an annual test of the domestic coinage executed during each calendar year by a commission, of whom part are ex officio members, the others, who serve without compensation, being appointed by the President. The purpose is to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint February 9, 1944, reported the following results of their examination of the 1943 coinage:

In accordance with section 3539 of the Revised Statutes, *the committee on counting* reports that the packages said to contain the pieces reserved by the several mints for the trial of coins were delivered to us by the Superintendent of the Mint at Philadelphia. Verification of the coins reserved were made by checking same against the original record of coin deliveries and reservations for assay in respect to the Philadelphia Mint, and against transcripts furnished the committee showing reservations for assay from the Denver and San Francisco Mints.

At random we selected from the deliveries a certain number of packages, and it was the intention of the committee to include all denominations. Of the packages selected the coins contained therein were counted and found to agree with the number as designated on each envelope from the different mints.

After this was accomplished, the reserved coins were then delivered to the committees on assaying and weighing.

The committee on assaying has completed the assays on samples taken from the different deliveries of coin, representing all denominations of silver coined during the calendar year 1943 by the United States Mints at Philadelphia, San Francisco, and Denver.

No gold was coined at any of the mints during the year.

The results of assays upon coins and mass melts of coins are satisfactory, being well within the legal limits of tolerance, which is three one-thousandths for silver coins.

The highest and lowest assays on individual silver coins were as follows:

	Highest	*Lowest*
Philadelphia Mint	900. 6	898. 6
Denver Mint	900. 0	898. 4
San Francisco Mint	900. 2	898. 4
Mass melt results:		
Philadelphia Mint	899. 3	
Denver Mint	899. 0	
San Francisco Mint	898. 7	

The committee on weighing reports that it selected at random a total of 141 coins, consisting of 77 coins from the Philadelphia Mint, 30 coins from the Denver Mint, and 34 coins from the San Francisco Mint. These coins were taken from 1,250 different deliveries and are believed to be adequately representative of the year's coinage of each mint.

The coins were weighed directly against weights from the set of coin and grain weights regularly reserved for the use of the Commission. This set was delivered under seal of the National Bureau of Standards, and was accompanied by a certificate from that Bureau showing that the errors of all weights of the set were negligible.

Weighings were made to the nearest 0.01 grain on a balance, the sensitiveness, accuracy, and reliability of which were tested and found adequate before the beginning of the work on February 9, and again on the morning of February 10.

It is to be noted that the weight of each coin was well within the tolerance allowed by law.

The following table shows the maximum deviation of the heaviest and lightest coins of each denomination from each mint as found from individual weighings:

Denomination	Legal deviation allowed	Actual deviation					
		Philadelphia		San Francisco		Denver	
		Heavy	Light	Heavy	Light	Heavy	Light
	Grains	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Half dollar	1.5	1.10	0.83	0.43	1.08	0.79	0.88
Quarter dollar	1.5	1.10	1.04	0.73	0.68	0.50	0.35
Dimes	1.5	0.72	1.02	0.34	0.85	0.37	0.13

Considering the 141 coins as a group the average deviation, with regard to sign, was found to be only 0.029 grain. In other words, of the coins weighed the heavy coins were very nearly offset by the light coins. The average error without regard to sign was 0.262 grain. In general, any coin taken at random from any mint is almost equally likely to be heavy or light, there being a slight preponderance toward heaviness.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ending June 30, 1944, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

Hon. HENRY MORGENTHAU, Jr.,
Secretary of the Treasury.

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1943

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1943

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint-service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

Gold production of the United States, including its insular dependencies, for the calendar year 1943, is estimated to have been 1,394,522 fine ounces, valued at $48,808,270; and silver production is estimated at 40,820,639 fine ounces valued at $29,028,010. A comparison of these figures with those of 1942 indicates decreases amounting to 2,347,284 ounces of gold, and 15,270,216 ounces of silver.

In 1943 Utah was the State of largest gold production, with 382,445 ounces. Arizona and California ranked second and third with 174,164 and 148,877 ounces respectively. California showed the largest decrease of any State over the previous year (745,271 ounces).

Idaho maintained first position in silver production in 1943 as in 1942, with 11,420,154 ounces. Utah with over 9,000,000 and Montana with over 8,000,000 ounces followed in order.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows. The production figures therein differ, as explained above, from the Bureau of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the Bureau of Mines at Washington.

ALASKA

The value of the production of gold and silver from mines in Alaska was $3,515,832 in 1943, compared with $17,151,858 in 1942, according to Charles W. Henderson and Robert V. Cushman of the United States Department of the Interior, Bureau of Mines. Gold recovered from ores and gravels totaled only 99,583 fine ounces valued at $3,485,405, a decrease of 80 percent from the 1942 gold production and the lowest quantity mined in the Territory since 1897. The most important factor contributing to this marked decrease in gold output was the War Production Board Gold Mining Limitation Order

L–208 issued on October 8, 1942, the full effect of which was not felt in Alaska until 1943. However, the regulations on gold mining in Alaska were eased slightly by the War Production Board in the spring of 1943 to allow those lode mines which produced 1,200 tons or less of commercial ore in 1941 and those placer mines which treated less than 1,000 cubic yards of material in 1941 to operate, provided that they employed not more than seven men. A serious shortage of labor at the mines, created by the high wages offered laborers on the numerous Army and Navy construction projects throughout the Territory, was another reason for the decrease. The Alaska Juneau Gold Mining Co. was the largest single producer of gold in the Territory in 1943.

Floating connected-bucket dredges recovered 19 percent of the total Alaska output of gold in 1943 compared with 51 percent in 1942. Only 7 of the 47 available floating dredges were in operation during the year; these dredges were allowed to work under limited reprieves. One dry-land dredge was in operation in 1943; nearly all earth-moving equipment had been disposed of to contractors on Government projects.

Other placers, totaling 106 operations, worked by bulldozers and hydraulic giants, drifting, and sluicing, together yielded 22 percent of the total gold produced in 1943.

Lode mines contributed 58 percent of the total Alaska gold output in 1943 as compared with 28 percent in 1942. There were only 8 active lode mines out of the 38 active in 1942. The Alaska Juneau Gold Mining Co., at Juneau, operating at a greatly reduced capacity was again the largest single producer of lode gold; the Alaska-Pacific Consolidated Mining Co., in the Willow Creek district near Wasilla, was second. These 2 producers made the Juneau and the Willow Creek districts respectively the largest lode-gold producing districts in 1943. Ore-dressing mills active in Alaska during the year included the 12,000-ton Alaska Juneau amalgamation-table concentration-flotation mill and 5 other mills, chiefly amalgamation-flotation plants. With the exception of the Alaska Juneau, no mill had a daily capacity over 75 tons.

The output of recovered silver in 1943, totaling 42,788 fine ounces valued at $30,427, was produced as a byproduct of gold mining. About 88 percent of the total output was recovered by lode-mining operations. All of the recovered lead output of Alaska in 1943 came from lead concentrates produced at the flotation mill of the Alaska Juneau Gold Mining Co.

The bulk of the gold and silver produced in 1943 was in the form of bullion or dust sent to mints and assay offices in the United States, either direct or through banks and bullion buyers located in Alaska. Most of the remaining gold and silver produced were obtained from high-grade ore and concentrates shipped to the Selby (Calif.) and Tacoma (Wash.) smelters. There are no smelters or refineries in the Territory.

The total production of gold and silver in Alaska, in terms of recovered metals, compiled from all sources by Charles W. Henderson, from 1880 through 1943, has been 25,739,234 fine ounces of gold, valued at $613,887,792, and 19,725,160 fine ounces of silver, valued at $14,031,221.

ARIZONA

The value of the production of gold, silver, copper, lead, and zinc from mines in Arizona was $121,212,902 in 1943 compared with $114,525,600 in 1942—an increase of 6 percent; it was the greatest since 1929, when the total value was $155,567,133, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. The value of the gold was $6,013,350, a 32-percent decline from 1942; and silver, $4,063,210, a 19-percent decline. The value of the gold production represented 5 percent of the State total, and silver 3 percent.

The Government gold-mine closing order issued in October 1942 resulted in an unusually large decrease in output of siliceous ores in 1943, especially gold ore, as nearly all large gold producers of gold ore were idle throughout the year.

The output of recoverable gold in Arizona in 1943 was 171,810 fine ounces—a 32-percent decrease from 1942. Gold from siliceous ores (chiefly dry and siliceous gold ore) declined 68,426 ounces or more than 72 percent and that from copper ore nearly 8 percent; gold from zinc-lead ore increased nearly 16 percent. Gold from placers decreased from 2,836 fine ounces in 1942 to 319 fine ounces in 1943 as no dredges of any type were active. Copper ore yielded 78 percent of the State total gold, siliceous ores 15 percent, and zinc-lead ore nearly 6 percent. Gold recovered from ores amalgamated amounted to 21 ounces; from ore and old tailings cyanided, 4,755 ounces; from concentrates smelted, 89,015 ounces; from crude ore sent direct to smelters, 77,700 ounces; and from placers 319 ounces. Gold ore treated at amalgamation mills decreased from 765 tons in 1942 to 4 tons in 1943, and siliceous material treated at cyanidation and cyanidation-concentration plants from 542,916 to 144,338 tons; 4 straight cyanidation plants treated 24,700 tons of material in 1943 compared with 15 plants that treated 337,350 tons in 1942. The most important cyanidation plants were those at the Mammoth–St. Anthony Limited, Iron King, and Gold Standard properties. Only 1 plant remained in operation at the close of the year. The gold output decreased sharply in the strictly gold-producing districts such as the San Francisco (Oatman, Goldroad, Katherine), Weaver (Octave), Martinez (Congress), and Vulture. The chief gold-producing districts in Arizona in 1943 were the Warren, Ajo, Verde, Old Hat, Pioneer (Superior), and Big Bug. The Copper Queen (Bisbee) branch of the Phelps Dodge Corporation continued to be the leading gold producer in Arizona; it was followed by the New Cornelia mine in Pima County, the United Verde mine in Yavapai County, the Mammoth-St. Anthony Limited property and the Magma mine both in Pinal County, and the Iron King mine in Yavapai County. These 6 properties produced 85 percent of the State total output.

The total gold production in the State of Arizona, in terms of recovered metal, from 1860 to 1943, inclusive, has been 10,599,750 ounces.

The output of recoverable silver in Arizona in 1943 was 5,713,889 fine ounces—a decrease of 19 percent from 1942. The chief decreases were 626,548 ounces in silver from copper ore, 539,097 ounces from siliceous ores, 117,594 ounces from zinc-lead ore and zinc-lead-copper

ore, 41,501 ounces from zinc ore and zinc-copper ore, and 25,450 ounces from lead ore. Copper ore yielded 76 percent of the State total silver, siliceous ores, 7 percent; zinc-lead ore, 11 percent; zinc-copper ore, 3 percent; zinc-lead-copper ore, 1 percent; and lead ore, 1 percent. The Phelps Dodge Corporation continued to be the chief silver producer in Arizona, although its output was 12 percent less than in 1942; its four properties (Copper Queen, Morenci, New Cornelia, and United Verde) produced 69 percent of the State gold output, 66 percent of the silver, and 58 percent of the copper. Other large silver producers in Arizona in 1943 were the Magma, Iron King, Trench-Flux, Ash Peak, and Shattuck Denn properties. The chief silver-producing districts were the Warren (Bisbee), Verde (Jerome), Ajo, Pioneer (Superior), Big Bug, Harshaw, and Copper Mountain (Morenci); more than 57 percent of the total silver came from the Warren and Verde districts.

The total silver production in the State of Arizona, in terms of recovered metal, from 1860 to 1943, inclusive, has been 281,466,394 ounces.

CALIFORNIA

California gold production in 1943 fell below that in any year since 1848, the year James A. Marshall made his historic discovery in the gravels of the American River near Coloma, according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. Higher wages, enlistment of miners in the armed forces, migration of miners to war industries, rising prices of supplies and equipment and difficulties in obtaining them, increased taxes, and the fixed price for gold were factors which accelerated the downward trend which has been under way since 1941. War Production Board Order L–208 promulgated October 8, 1942, was in force throughout 1943 with the result that no gold mines except the very smallest could operate except under special grant; only 38 such grants were issued by the Board to California miners during 1943. California has never derived a large part of its gold output as a byproduct from base metal mines; this proportion was much higher in 1943, however, than in preceding years.

Monthly production figures covering the period since January 1937 show an upward trend until a peak was reached during 1940. In 1941, however, a reaction set in which gained headway in 1942. By February 1943 a production of 8,547 ounces was reported compared with a high of 149,718 ounces recorded in December 1940. The monthly average in 1943 was 12,361 ounces compared with a monthly average of 121,306 ounces in 1940. The 1943 monthly data indicate that the declining trend, though greatly slowed compared with that in 1941 and 1942, had not been fully arrested.

The output of recoverable gold from California ores, gravels, and re-treated tailings in 1943 was 148,328 fine ounces valued at $5,191,480 compared with a production of 847,997 ounces valued at $29,679,895 in 1942; the decrease in both quantity and value was 83 percent. In 1943, 139 lode mines produced 58,903 ounces of gold, valued at $2,061,605, and 82 placer mines produced 89,425 ounces of gold, valued at $3,129,875. Placer mines supplied 60 percent and lode mines 40 percent of the total in 1943 compared with 55 percent for placer mines and 45 percent for lode mines in 1942; the placer-lode gold production ratio was the highest since 1900, when separate

annual data were first compiled and almost certainly the highest since large-scale hydraulicking was terminated by the Sawyer decision of 1884. Of the gold derived from lode operations, 84 percent was recovered from dry gold ore, 6 percent from lead ore, 5 percent from copper ore, and most of the remainder from zinc-copper ore. Metallurgical data show that 52 percent of the lode gold in 1943 (24 percent in 1942) was recovered by smelting of concentrates, 20 percent (38 percent in 1942) by amalgamation of ore and old tailings, 14 percent (3 percent in 1942) by smelting of ore and old tailings, and 14 percent (35 percent in 1942) by cyanidation of ore and old tailings. The shift in importance from amalgamation and cyanidation to concentration and direct smelting parallels the shift in emphasis from gold to base metal mines in the State.

Although gold output was not as greatly reduced at placers as at lode mines, nevertheless, the placer production decreased 81 percent. In the following data on placer mining 1942 figures are given in parentheses. Dredging was the leading method of working placer deposits in 1943 both as to yardage of gravel washed and the quantity of placer gold recovered. Floating dredges of the connected-bucket type washed 17,880,000 (106,543,000) cubic yards of gravel and recovered 66,999 (310,937) ounces of gold, valued at $2,344,965 ($10,882,795), or 75 (67) percent of the placer gold produced in the State in 1943. Dragline dredges (those having a floating washing plant to which gravel is delivered by a dragline excavator) washed 3,180,000 (24,526,000) yards of gravel, which yielded 14,196 (117,906) ounces of gold, valued at $496,860 ($4,126,710). Nonfloating washing plants to which gravel was delivered by mechanical means washed 547,000 (1,637,000) yards of gravel and recovered 2,997 (10,044) ounces of gold, valued at $104,895 ($351,540). Hydraulic mines produced 1,723 (6,106) ounces of gold valued at $60,305 ($213,710) derived from 366,000 (1,980,000) yards of gravel; 4,500 (22,000) yards of gravel from drift mines were washed from which 970 (2,339) ounces of gold, valued at $33,950 ($81,865) were recovered. Small scale hand-operated equipment, including small sluice boxes, long tons, dip boxes, rockers, pans, and dry washers, was used in the production of 2,540 (16,152) ounces of gold, valued at $88,900 ($565,320). Small outputs of gold were credited to suction dredge and Becker-Hopkins dredge operations in 1942 but no properties using either of these methods were active in 1943.

Yuba County, because of the productivity of those connected-bucket dredges which were granted permission to operate with older men under order L–208, was the leading gold-producing county in the State, thus displacing Nevada County which had held first place for many years. Nevada County stood in second place in 1943; almost all of the gold produced in the county was credited to lode mines in the Grass Valley-Nevada City district. Sacramento and Butte Counties, both depending principally on placer gold production, stood in third and fourth places, respectively. Tuolumne County, which occupied fifth place, derived most of its 1943 gold production from the Eagle Shawmut mine. Other counties producing over $100,000 in gold in 1943, listed in order of output, were Stanislaus County (dredging), Mariposa County (gold ore), San Joaquin County (dredging), Sierra County (gold ore and drift mining), Inyo County (base metal ores), Siskiyou County (copper ore and placers), and Kern County (gold ore and scheelite-gold placers).

The principal gold-producing mines in California in 1943, listed by operators and in order of output, were the Yuba Consolidated Gold Fields (Yuba unit), Yuba County (dredge); Natomas Co., Sacramento County (dredge); Lava Cap Gold Mining Corporation, Nevada County (gold ore); Golden Feather Dredging Co., Butte County (dragline dredge); Miller and Clemson, Tuolumne County (gold ore); Empire Star Mines Co., Ltd., and New Verde Mines Corporation (joint operations of Empire Star mines) Nevada County (gold ore); Tuolumne Gold Dredging Corporation, Stanislaus County (dredge); Gold Hill Dredging Co. (Upper Comanche dredge), San Joaquin County (dredge); Original Sixteen to One Mine, Inc., Sierra County (gold ore); and Shoshone Mines, Inc., Inyo County (lead ore).

The output of silver from California ores, gravels, and re-treated tailings in 1943 was 609,075 fine ounces, valued at $433,120, compared with a production of 1,450,440 ounces, valued at $1,031,424, in 1942. Of the lode silver 49 percent was derived from lead ore, 22 percent from dry gold ore, 12 percent from tungsten ore, 8 percent from copper ore, 4 percent from zinc-copper ore, and 5 percent from zinc ore, gold-silver ore- zinc-lead ore, and silver ore. A small quantity of silver was recovered as a byproduct of dredging and other placer mining carried on principally for gold. Smelting of ore and old tailings supplied 56 percent of the lode silver recovered in the State; smelting of concentrates, 41 percent; and cyanidation and amalgamation of ore and old tailings, 3 percent.

The principal silver-producing mines in California in 1943, listed by operators and in order of output, were Shoshone Mines, Inc., Inyo County (lead ore); Darwin Mines, Arthur J. Theis, trustee, Inyo County (lead ore); Lava Cap Gold Mining Corporation, Nevada County (gold ore); United States Vanadium Corporation, Inyo County (tungsten ore); The Mountain Copper Co., Ltd., Shasta County (copper ore); L. D. Foreman (Last Chance slag dump), Inyo County (lead ore); G. Ivan Smith, Calaveras County (zinc ore and zinc-copper ore); Damon & Damon, Inyo County (gold-silver ore and zinc ore); and Gray Eagle Copper Co., Siskiyou County (copper ore).

CENTRAL STATES

No mine production of gold was reported in the Central States from 1941 to 1943, inclusive. Silver recovered in 1943 totaled 161,917 ounces, valued at $115,141, compared with 130,884 ounces, valued at $93,073, in 1942, according to A. J. Martin, of the United States Department of the Interior, Bureau of Mines. Fluctuations in yearly silver production in the Central States are not significant, as silver is a minor constituent of the ores and brings no return to lead and zinc mines and only small returns to two or three copper mines. Most of the silver output is recovered as a byproduct in refining lead and copper bullion, but some native silver is recovered in Michigan by hand picking at the mill. Lead ore from southeastern Missouri yielded 111,285 ounces of recoverable silver in 1943; copper ore from Michigan, 48,479 ounces; and zinc-lead fluorspar and lead fluorspar ores from southern Illinois, 2,153 ounces. The principal producers of the ores from which silver was recovered were the St. Joseph Lead Co. lead mines in southeastern Missouri and the Quincy and North Kearsarge copper mines in Michigan.

COLORADO

Gold recovered from Colorado mines in 1943 totaled 137,558 fine ounces, valued at $4,814,530, a 49-percent decrease from 1942, and was the smallest production of any year since 1876, according to Charles W. Henderson, R. H. Mote, and Robert V. Cushman, of the United States Department of the Interior, Bureau of Mines.

The total ore sold or treated in Colorado was 1,631,318 tons in 1943, compared with 1,797,386 tons in 1942. The number of producing lode mines decreased from 311 in 1942 to 235 in 1943, the number of placer mines decreased from 68 to 17.

The Cripple Creek district, Teller County, continued to be the leading gold-producing district in Colorado; it was followed, in order, by the California (Leadville) district, Lake County; Animas district, San Juan County; Upper San Miguel district, San Miguel County; Mosquito Creek district, Park County; Sneffels district, Ouray County; Summitville district, Rio Grande County; Empire district, Clear Creek County; Buckskin district, Park County; Southern district, Gilpin County; and Trail Creek district, Clear Creek County, all of which yielded 1,000 ounces and upward of gold. Dry and siliceous ores yielded 86 percent of the State total gold; zinc-lead ore, 12 percent; and copper, lead, lead-copper, and zinc ores, and the small amount from placer operations, 2 percent. Except for the Cripple Creek district, virtually all the ores in Colorado districts—although chiefly valuable for gold and silver—contain some zinc, often discarded. A change in selection of ore and in metallurgy at many of the mines operating in the State in 1943 converted them into producers of zinc concentrates or products containing recoverable zinc and thereby allowed several of the largest gold-silver mines to continue to operate. The mines of the Cripple Creek district continued to operate at a greatly reduced scale under several reprieves granted by the War Production Board. Provisions of the first reprieve effective December 8, 1942, allowed operation until June 8, 1943, and called for conversion of a 300-ton unit of the Golden Cycle mill at Colorado Springs to selective-flotation in order to handle 450–500 tons of zinc-lead ore per day. Treatment of dry gold ore from Cripple Creek and Boulder Counties was permitted because this type of ore was needed in the mill plant. Conversion of the flotation unit to selective-flotation was completed the latter part of April 1943. A further reprieve of indefinite duration was granted August 8, 1943. Specific data on yardage handled at small-scale placer operations are not obtainable.

Mine production of recovered silver in 1943 was 2,664,142 fine ounces, valued at $1,894,501, compared with 3,096,211 fine ounces in 1942, valued at $2,201,750. Creede district, Mineral County, continued to be the largest producer of silver in 1943, followed in order by California (Leadville) district, Lake County; Animas district, San Juan County; Roaring Fork district, Pitkin County; Upper San Miguel district, San Miguel County; Red Cliff district, Eagle County; Griffith district, Clear Creek County; and Pioneer (Rico) district, Dolores County, all of which produced 100,000 ounces and upward of silver. Dry and siliceous ores yielded 61 percent of the State total silver; zinc-lead ore 34 percent; lead ore nearly 5 percent; and copper, lead-copper ore, and zinc ores and a small amount from placer mines, nearly 1 percent.

The total production of gold and silver in Colorado, in terms of recovered metal, compiled from all sources by Charles W. Henderson from 1858 through 1943, has been 38,702,940 fine ounces of gold valued at $848,479,864 and 723,710,917 fine ounces of silver valued at $562,577,427.

EASTERN AND APPALACHIAN STATES

The total gold output by mines in the Eastern and Appalachian States in 1943 was 2,878 fine ounces valued at $100,730, a decrease of 80 percent from 1942 and the lowest in any year since 1933, according to A. J. Martin of the United States Department of the Interior, Bureau of Mines. The silver production totaled 128,129 ounces valued at $91,114 in 1943, an increase of 22 percent over 1942. The old Haile mine in Lancaster County, S. C., principal producer of gold in the Eastern States from 1937 to 1942, inclusive, and the Condor (old Howie) mine at Waxhaw in Union County, N. C., second-largest producer in 1941 and 1942, were idle throughout 1943. The only output of gold ore during the year was 156 tons shipped crude to the U. S. Metals Refining Co. smelter at Carteret, N. J., from the Terry mine near Smyrna, S. C.; the ore contained 147 ounces of gold and 135 ounces of silver. In Georgia 2 ounces of gold were recovered by individuals placer mining in Lumpkin County, and 10 ounces were found in a creek bed in Union County while rock was being taken out to crush for road work.

The rest of the gold and silver produced in the Eastern and Appalachian States in 1943 was recovered as a byproduct of the mining of other metals. The Cornwall iron (magnetite-pyrite-chalcopyrite) mine in Pennsylvania yielded 2,218 ounces of recoverable gold and 13,095 ounces of silver, all contained in copper concentrates shipped to the smelting and electrolytic-refining plant at Laurel Hill, N. Y. The Tennessee output was 303 ounces of gold and 52,058 ounces of silver, recovered from blister copper shipped to an electrolytic refinery by the Tennessee Copper Co., which operated 4 mines, 2 mills, a copper smelter, sulfuric-acid plants, and copper-sulfate works in the Ducktown district. Zinc-lead ore from the Balmat mine of the St. Joseph Lead Co. in St. Lawrence County, N. Y., yielded 38,004 ounces of recoverable silver. In North Carolina copper ore from the Fontana and Hazel Creek mines in Swain County and the Terry & Knowlton prospect in Mecklenburg County yielded 131 ounces of gold and 7,169 ounces of silver. The Vermont production was 17 ounces of gold and 2,721 ounces of silver, contained in copper concentrates shipped from the Elizabeth mine of the Vermont Copper Co., reopened in September 1943 after having been closed since June 1930. In Virginia 50 ounces of gold and 14,947 ounces of silver were recovered from zinc-lead ore from the Valzinco mine of Panaminas, Inc., in Spotsylvania County.

IDAHO

The total value of gold, silver, copper, lead, and zinc produced by Idaho mines was $43,199,910 in 1943 compared with $46,063,326 in 1942, a 6-percent decrease, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. The value of the gold output was $1,078,280, silver $8,320,128,

copper $604,240, lead $14,468,550, and zinc $18,728,712. The quantity of each metal produced was less than in 1942.

The output of recoverable gold in Idaho was nearly 68 percent less in 1943 than in 1942. This decrease, which resulted from the closing in 1942 of most of the large lode producers and all the large placer producers, was caused principally by the gold-mine closing order issued by the Government in October 1942. The yield of gold from lode mines decreased from 50,440 ounces in 1942 to 30,553 ounces in 1943 and that from placers from 44,580 to 255 ounces. The output of gold from placers was the smallest ever recorded in the history of the State. About 53 percent of the State total gold in 1943 came from siliceous gold ore, more than 26 percent from zinc-lead ore, and nearly all the remainder from siliceous gold-silver ore. In 1942 dredging operations (chiefly bucket-line dredges) recovered 43,300 ounces (nearly 46 percent) of Idaho's gold output; no dredges operated in 1943. As a result of the idleness of dredges, gold production decreased sharply in 1943 in the Boise Basin, Yankee Fork, Middle Boise, Elk City, Hoodoo, Gibbonsville, Warren, and Orogrande districts. Gold output from lode mines slumped in the Middle Boise, Carson, West View, Mineral Hill (Lemhi County), Burgdorf-Marshall Lake, Ten Mile, Boise Basin, Thunder Mountain, and Yankee Fork districts. In 1943 nearly half of the State gold output came from a lode mine in the Middle Boise (Atlanta) district.

Talache Mines, Inc., operating a lode property at Atlanta, was by far the largest gold producer in Idaho, although the output was 40 percent less in 1943 than in 1942; it was followed by the Triumph mine near Ketchum and the Yellow Pine mine at Stibnite. These three properties produced 81 percent of the State gold output in 1943.

The total production of gold, in terms of recoverable metals, from 1863 to 1943 inclusive has been 7,754,986 ounces.

The output of recoverable silver in Idaho was 11,700,180 fine ounces in 1943—20 percent less than in 1942. A greater decrease was prevented by the discovery in June of high-grade lead-silver ore in the Chester vein of the Sunshine property near Kellogg. However, the total production of silver from this mine, leading silver producer in the United States, declined more than 1,000,000 ounces. Large decreases in silver output occurred also at the Mineral Point, Hecla, Polaris, De Lamar, Bunker Hill & Sullivan, Morning, Sherman, and Crescent properties. The Coeur d'Alene region produced nearly 88 percent of the State total silver in 1943; the remainder came largely from the Warm Springs, Bayhorse, Yellow Pine, Deadwood Basin, Blue Wing, Middle Boise, and South Mountain districts. Of the State total silver, zinc-lead ore yielded nearly 43 percent, silver ore 39 percent, lead ore nearly 16 percent, gold-silver ore and gold ore 2 percent, and other ores less than 1 percent. The yield of silver from silver ore decreased 2,932,814 ounces and from zinc-lead ore 357,302 ounces, but that from lead ore increased 716,016 ounces, owing to the yield from the Chester vein.

Eight mines—the Sunshine, Bunker Hill & Sullivan, Mineral Point, Triumph, Hecla, Page, Morning, and Polaris—produced 79 percent of the silver output of the State during 1943. All these mines except the Triumph are in the Coeur d'Alene region.

The total production of silver, in terms of recoverable metals, from 1863 to 1943 inclusive has been 495,920,027 ounces.

MONTANA

The total value of gold, silver, copper, lead, and zinc produced from Montana ores and gravels was, in terms of recovered metals, $53,642,658 in 1943, compared with $60,129,853 in 1942, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. This decrease was due to the smaller output of each metal, for although the average prices paid for copper, lead, and zinc were all higher than in 1942, only the value of the copper output showed a gain. Gold and silver production was cut drastically by the further closing of gold mines in Montana.

Virtually all gold mines in Montana were closed by the end of 1943. Only those remained active that could justify their operations by reason of supplying smelters with much-needed flux or by reason of producing some other mineral of strategic importance to the war program. The reasons for closing, Government Order L–208 issued in 1942, scarcity of labor, inadequate supply of equipment and materials, etc., which affected gold mines in 1942, continued to exist throughout 1943.

Montana ores and gravels yielded 59,586 fine ounces of gold in 1943, compared with 146,982 ounces in 1942—a 59 percent decrease; the output from lode mines decreased 60,136 ounces and from placer mines 27,170 ounces. Siliceous ores yielded 46 percent of the State total gold, and base metal ores 30 percent; there was a decrease in gold from each class of ore. Gold production from every county in the State except Flathead and Judith Basin showed a decrease, but both of these counties are of negligible importance as gold producers. The largest decreases were noted from mines in Madison, Broadwater, Jefferson, Park, Lewis and Clark, Silver Bow, and Granite Counties. Gold ore mined totaled 72,616 tons compared with 322,140 tons in 1942 and comprised 34,926 tons treated in amalgamation and cyanidation mills, 12,666 tons in concentrating mills, and 25,024 tons shipped crude to smelters. Ore treated at amalgamation and cyanidation mills (with or without concentrating equipment) yielded 16 percent of the State total gold; ore concentrated, 32 percent; ore of all classes shipped crude to smelters, 28 percent; and placers, 24 percent.

Decreases of 27,170 ounces in gold and 5,587 ounces in silver were noted in the yield from placer mines. Three floating connected-bucket dredges were active in 1943; however, one of these—the Porter Bros. Corporation dredge—ceased operations August 8, 1943. The other two remained in operation through December 1943 and are still operating in 1944. The H. & H. Mines Co. dredge recovers gold and scheelite and the Perry-Schroeder Mining Co. dredge recovers gold, sapphires, and some platinum. These dredges treated 3,215,759 cubic yards of gravel and recovered gold valued at $475,265, indicating an average recoverable gold value of 14.8 cents per cubic yard treated. No dragline floating or dry-land dredges were active in Montana in 1943.

The leading gold producers in Montana in 1943 (each either closed during 1943 or active in 1944 only because of special product mined or contained in the ore) were all the company-operated copper mines of the Anaconda Copper Mining Co. at Butte, the Perry-Schroeder dredge (gold and sapphires) on the Missouri River in Lewis and Clark County, the Boaz mine (cyanide mill closed December 1943) in Madison County, the Golden Sunlight mine (siliceous flux) in Jefferson

County, the Porter Bros. dredge (closed August 1943) near Helena, the Granite-Bimetallic mine (siliceous tailings as flux) in Granite County, and the Ohio Keating mine (cyanide mill closed July 1943).

The total production of gold in Montana, in terms of recovered metal, from 1862 to 1943 inclusive, has been 16,886,996 ounces.

The output of recoverable silver in Montana in 1943 was 8,450,370 fine ounces, compared with 11,188,118 ounces in 1942—a 24-percent decrease. Decreases were noted in nearly all the important silver-producing counties; the largest were in Silver Bow, Cascade, Granite, and Flathead. Ore treated at concentrating mills yielded 84 percent of the total silver, and crude smelting ore 15 percent. Copper ore yielded 71 percent of the State total silver; siliceous ore 15 percent; zinc-lead ore 12 percent; and lead ore, zinc ore, and placers together 2 percent. The output of silver ore was 140,466 tons and of gold-silver ore 53,890 tons.

Copper mines, dumps, tailings piles, and slime ponds (at Anaconda), zinc mines at Butte, and the Flathead mine in Flathead County—all operated by the Anaconda Copper Mining Co.—produced 78 percent of the total silver in 1943. Other large producers included the Emma mine at Butte (all byproduct silver), the Granite-Bimetallic mine (tailings) in Granite County, the St. Joseph Lead Co. property (zinc-lead ore) (closed in October 1943) in Judith Basin County, the Mike Horse mine (zinc-lead ore) in Lewis and Clark County, and the Elkhorn mine dump in Jefferson County.

The total production of silver in Montana, in terms of recovered metals, from 1862 to 1943 inclusive, has been 732,841,398 ounces. Montana has produced more silver (lode and placer combined) than any other State.

NEVADA

Nevada gold production (in terms of recovered metals) in 1943 decreased 51 percent and silver 56 percent in both quantity and value compared with 1942 according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. Higher wages, enlistment of miners in the armed forces, migration of miners to war industries and military construction jobs, rising prices of supplies and equipment and the difficulties in obtaining them, increased taxes, and the fixed prices for gold and silver were all factors in reducing Nevada's precious metal production. In addition the enforcement throughout 1943 of War Production Board Order L–208, which had been promulgated October 8, 1942, resulted in many gold mines being inactive. Gold and silver production would have fallen even lower had it not been for substantial outputs of the precious metals as by-products from base metal mines stimulated by war demands. In 1943 for the first time in the history of the State, more gold was derived from base metal ores than from dry ores.

The output of gold from Nevada ores, re-treated tailings, and gravels in 1943 was 144,442 fine ounces valued at $5,055,470 compared with 295,112 ounces valued at $10,328,920 in 1942. This output was the lowest in both quantity and value since 1934. Production of silver in 1943 was 1,620,280 fine ounces valued at $1,152,199 compared with 3,723,435 ounces valued at $2,647,776 in 1942.

Gold was recovered from the following sources: copper ore, 50 percent; dry gold ore, 35 percent; placer gravel 8 percent; dry gold-silver

ore, 4 percent; and other ores, 3 percent. Metallurgical data show that 56 percent of the State lode gold was recovered by the smelting of concentrates, 36 percent by cyaniding of ore and old tailings, 6 percent by the direct smelting of ore and old tailings, and 2 percent by amalgamation of ore and old tailings. Amalgamation, cyanidation, and direct smelting as gold recovery methods were less important in 1943 than in 1942; the proportion of gold recovered by smelting of concentrates increased greatly.

The principal Nevada gold mines in 1943 listed by operating companies and in order of output, were Kennecott Copper Corporation (Nevada Mines Division), White Pine County (copper ore); Getchell Mine, Inc., Humboldt County (gold ore); Consolidated Coppermines Corporation, White Pine County (copper ore); Manhattan Gold Dredging Co., Nye County (connected-bucket dredge); International Smelting & Refining Co., Lander County (copper ore); Willow Creek Mines, Inc., Lander County (gold ore); Sutro Tunnel Coalition, Inc., Storey County (gold-silver ore); and Consolidated Chollar Gould & Savage Mining Co., Storey County (gold ore and old tailings).

Nevada lode silver was recovered from the following sources in 1943: Copper ore, 23 percent; dry silver ore, 21 percent; dry gold-silver ore, 18 percent; lead ore, 18 percent; zinc ore, 16 percent; dry gold ore, 3 percent; and zinc-lead ore, 1 percent. Placer gravels, washed primarily for gold, yielded a small quantity of silver. Smelting of concentrates accounted for 44 percent of the lode silver produced in Nevada in 1943; 35 percent was recovered by direct smelting of ore and old tailings and almost 21 percent by cyanidation of ore and old tailings; a very small quantity of silver was recovered by amalgamation of ore and old tailings.

The principal silver mines in Nevada in 1943, listed by operating companies and in order of output were Combined Metals Reduction Co., Lincoln County (zinc ore and gold-silver ore); Desert Silver, Inc., Esmeralda County (silver ore); Kennecott Copper Corporation (Nevada Mines Division) White Pine County (copper ore); lessees of the Tonopah Mining Co. of Nevada, Nye County (gold-silver ore); Bristol Silver Mines Co., Lincoln County (silver ore); Sutro Tunnel Coalition, Inc., Storey County (gold-silver ore); International Smelting and Refining Co., Lander County (copper ore); Salt Lake-Pioche Mining Co. (financier mine) Lincoln County (lead ore); Rip Van Winkle Consolidated Mining Co., Elko County (lead ore); and Prince Consolidated Mining Co., Lincoln County (lead ore and zinc ore).

NEW MEXICO

Lode and placer mines in New Mexico yielded (in terms of recovered metal) 5,563 fine ounces of gold valued at $194,705 in 1943, according to Charles W. Henderson and R. H. Mote of the United States Department of the Interior, Bureau of Mines. The production of gold, which decreased 53 percent from the 1942 output, is the smallest on record since 1876. The principal gold-producing districts in 1943 were: Central, Grant County, which contributed 49 percent of the State production of recovered gold; Lordsburg, Hidalgo County, 26 percent; Mogollon, Catron County, 13 percent; Steeple Rock, Grant County,

4 percent; Magdalena, Socorro County, 3 percent; and Pinos Altos, Grant County, 2 percent.

Copper ore yielded 37 percent of the State total gold; dry and siliceous ores, 29 percent; zinc ore, 17 percent; lead and zinc-lead ores, 15 percent; and placers 2 percent.

The mine production of recovered silver in New Mexico in 1943 was 463,583 fine ounces, valued at $329,659. The Central district, Grant County, produced 39 percent of the State total in 1943; Lordsburg, Hidalgo County, 18 percent; Magdalena, Socorro County, 14 percent; Mogollon, Catron County, 10 percent; Steeple Rock, Grant County, 5 percent; Pinos Altos, Grant County, 4 percent; San Simon, Hidalgo County, 3 percent; Kingston, Sierra County, 3 percent; Swartz, Grant County, 1 percent; and Burro Mountain, Grant County, 1 percent.

Zinc-lead ore yielded 50 percent of the total silver; copper ore, 22 percent; zinc ore, 14 percent; dry and siliceous ores, 13 percent; and lead and lead-copper ores and a small amount from placer operations, 1 percent.

The total production of gold and silver in New Mexico in terms of recovered metal, as compiled by Charles W. Henderson, from 1848 through 1943, has been 2,166,304 fine ounces of gold valued at $49,154,833 and 66,416,329 fine ounces of silver valued at $51,960,697.

OREGON

Gold production in Oregon in 1943 sank to less than 1 percent of the all-time record set just 3 years earlier (in 1940) and was less than 3 percent of the output in 1942 according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. The production of gold from Oregon ores, gravels and re-treated tailings in 1943 was 1,097 fine ounces valued at $38,395 compared with 46,233 ounces valued at $1,618,155 in 1942. The leading Oregon gold producer in 1943 reported an output valued at less than $5,500. Lode mines produced 81 percent of the gold and placers 19 percent, thus reversing a condition of many years standing in which placers had been the principal source of gold. Over 99 percent of Oregon lode gold was recovered from dry and siliceous gold ore; the only other source was copper ore. Metallurgical data show that 47 percent of Oregon lode gold was recovered by direct smelting of ore and old tailings, 31 percent by amalgamation of ore, 17 percent by smelting of flotation concentrates, and 5 percent by cyanidation of ore. Placer mining in Oregon in 1943 was confined to hydraulicking which accounted for 60 percent of the placer gold, small scale hand methods, 25 percent, and drift mining 5 percent; terminal clean-ups at inactive dragline dredges and nonfloating washing plants supplied 10 percent.

Oregon ores, gravels and re-treated tailings in 1943 yielded 10,523 fine ounces of silver, valued at $7,483, compared with 87,376 ounces, valued at $62,134, in 1942; the decrease was 88 percent in both quantity and value. Jefferson County yielded 92 percent of the State total, dry gold ore over 99 percent, and smelting of flotation concentrates 83 percent. The Oregon King mine, Ashwood district, Jefferson County was the principal source of silver in the State in 1943 as in 1942.

SOUTH DAKOTA

Metal mining in South Dakota for the production of gold and silver was limited to Lawrence County in 1943. As a result of the drastic gold mining limitation order, gold mining in the State experienced a severe set-back. In 1943 this region yielded (in terms of recovered metal) 106,444 fine ounces of gold, valued at $3,725,540, and 35,886 fine ounces of byproduct silver, valued at $25,219, according to Charles W. Henderson and Robert V. Cushman of the United States Department of the Interior, Bureau of Mines. The production of gold decreased 80 percent from the 1942 figure and the production of silver decreased 81 percent.

Only two major gold mines were still in operation on January 1, 1943, and these operated only until June 8, 1943, on reprieves granted them by the War Production Board to complete the milling of broken ore in the stopes. No placer gold was produced in South Dakota in 1943.

The largest producing gold mine in the State was the Homestake mine, located at Lead. Curtailed operations, including only the hoisting and milling of 183,246 tons of broken ore of higher grade than that milled in 1942, were carried on from January through May 1943. The ore, treated by amalgamation followed by cyanidation of sands and slimes, yielded 103,675 fine ounces of gold and 21,448 fine ounces of silver, a decrease of 79 percent in the combined value from 1942.

The Bald Mountain Mining Co. at Trojan, the second largest producer of gold and silver in South Dakota in 1943, produced 18,772 tons of ore yielding 2,714 fine ounces of gold and 11,240 fine ounces of silver. The Belle Eldridge Gold Mines, Inc., operated its group of claims near Deadwood continuously throughout 1943 and recovered gold and silver as a byproduct from base-metal mining.

The total production of gold and silver, in terms of recovered metals, in South Dakota from the beginning of production in 1876 through 1943, as compiled by Charles W. Henderson, has been 20,666,485 fine ounces of gold, valued at $504,924,184, and 9,569,099 fine ounces of silver, valued at $6,807,080.

TEXAS

Mines in Texas produced (in terms of recovered metal) 4 fine ounces of gold, valued at $140, and 10,284 fine ounces of silver, valued at $7,313, in 1943, according to Charles W. Henderson and R. H. Mote of the United States Department of the Interior, Bureau of Mines. Compared with 1942 the output of gold and silver both decreased 98 per cent in quantity and value.

From 1885 through 1942 silver has been the principal metal produced in Texas, and most of the output has come from the Presidio mine at Shafter, Presidio County. This property ceased operations in September 1942; soon afterward all equipment at the property was dismantled and sold. The silver produced in 1943 came largely from the Hazel mine in Culberson County and the Plata Verde mine in Hudspeth County. The total State production of gold and silver, in terms of recovered metal, from 1885 through 1943, as compiled by Charles W. Henderson, has been 8,281 fine ounces of gold, valued at $223,780, and 33,196,821 fine ounces of silver, valued at $23,360,028, most of the silver (30,293,606 ounces) coming from the Presidio mine.

UTAH

The total value of the gold, silver, copper, lead, and zinc produced from Utah ores and gravels in 1943 was the greatest in the history of the State and exceeded that of any other State in the Union, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines. This value was, in terms of recoverable metal, $124,562,540 compared with $113,552,848 in 1942, a 10-percent gain.

The production of gold in Utah in 1943 exceeded that of any other State, although virtually all the mines active in Utah in 1943 were primarily base-metal mines. The production in 1943 was 390,470 fine ounces, compared with 391,544 ounces (highest in the State's history) in 1942. Base-metal ores yielded 92 percent of the State total and siliceous ores virtually all the rest; placer-gold production was negligible. The gold-mine closing order issued in October 1942 has had little effect on the Utah gold production; however, the order has made it more difficult for the smelters in the Salt Lake Valley to meet the requirements of silica for flux. Only two mines producing gold ore in quantity were active in 1943; and these, because of the siliceous nature of their ore, had received permission from the War Production Board to remain in operation. Copper ore furnished 79 percent of the State gold, and siliceous ores 8 percent; the remainder came from zinc-lead ore, slag, lead ore, zinc ore, zinc-lead-copper ore, lead-copper ore, and placers. Ores of the Bingham district, by far the most important gold-producing area in Utah, yielded 343,551 ounces—a gain of 16,293 ounces compared with 1942; however, this gain did not offset the losses from the Park City region, the Tintic district, and the Camp Floyd district (in Tooele County). The gain in the Bingham district was the result of the extraordinarily large production of by-product gold from operations at the Utah Copper Co. and of smaller gains from the National Tunnel & Mines Co. and the Boston Consolidated properties. The Tintic district produced 22,470 ounces and was second in importance as a gold producer; the decrease in 1943 from 1942 was due to the producing of a smaller quantity of siliceous ore. The Park City region, third in importance in the State, in 1943 produced 19,559 ounces of gold, a decline of 3,376 ounces compared with 1942. Gains at the New Park Mining Co. did not offset losses at the Silver King Coalition Mines Co. and the Park Utah Consolidated Mines Co. Tooele County showed a notable decrease in 1943, as the gold mines in the Camp Floyd district produced a much smaller quantity of gold than in recent years. Ores of all classes treated in concentrating mills yielded 90 percent of the State total gold and ore shipped direct to smelters, slag-fumed and placers the rest.

The Utah Copper Co. produced about 79 percent of the State production of gold and was followed by the United States & Lark mines at Bingham, the New Park Mining Co. property in the Park City region, the Tintic Bullion property in the Tintic district, the Boston Consolidated property in the Bingham district, the Eureka Bullion property in the Tintic district, the Mammoth mine in the Tintic district, and the Tintic Standard mine in the Tintic district; these eight properties produced 95 percent of the State total.

The total production of gold in Utah, in terms of recovered metal, from 1864 to 1943, inclusive, has been 9,840,243 ounces.

The output of recoverable silver in Utah in 1943 was 9,479,340 fine ounces, a decrease of 10 percent compared with 1942. Production from mines in the Bingham district was slightly more and in Tooele County considerably more than in 1942, but substantial decreases were noted in the Park City region and the Tintic district. Zinc-lead, zinc, and zinc-lead-copper ores yielded 48 percent of the State total; copper ores, 31 percent; siliceous ores, 16 percent; and lead and lead-copper ores, 5 percent. Ore concentrated yielded 79 percent of the State total and crude ore shipped direct to smelters virtually all the remainder. The Bingham district continued to be the chief source of silver; it was followed by the Park City region, the Tintic district, and Tooele County.

The Utah Copper mine was again the chief silver producer in the State, followed by the United States & Lark, Silver King Coalition, Tintic Standard, Mayflower, Park Utah Consolidated group of properties, Calumet, Harold (dump), and Chief Consolidated group of properties; these properties produced 87 percent of the State output of silver.

The total production of silver in Utah, in terms of recovered metal, from 1864 to 1943, inclusive, has been 701,354,446 ounces.

WASHINGTON

Washington mines yielded gold, silver, copper, lead, and zinc valued, in terms of recoverable metals, at $7,838,012 in 1943 compared with $8,172,609 in 1942, according to G. E. Woodward and Paul Luff of the United States Department of the Interior, Bureau of Mines; the output of silver and lead showed slight gains, whereas the output of each of the other metals decreased. The average prices paid for copper, lead, and zinc were considerably higher than in 1942, which tended to maintain a total value of metal output about equivalent to that in 1942. The decrease in gold output in 1943 was caused by the closing of nearly all the gold mines in the State. As in former years, copper was derived almost entirely from the Holden property of the Howe Sound Co., in Chelan County; although the tonnage of ore treated was greater than in 1942, it had a lower copper, gold, silver, and zinc content. The decreased production of zinc and the gain in output of lead was the net result of the treatment of a smaller tonnage of zinc-lead ore in Pend Oreille County, having a lower zinc but a higher lead content than in 1942. The Pend Oreille Mines & Metals Co. was again the leading producer of both lead and zinc in the State.

The output of recoverable gold from lode and placer operations in Washington in 1943 was 65,244 fine ounces, a 13-percent decrease from the output in 1942. Nearly all the gold-producing mines in the State had closed by midyear 1943; those remaining open had received special dispensation from the War Production Board because of their importance as a flux producer or peculiar conditions of operation.

This, in addition to the lowering in the gold content of the ores treated by the Howe Sound Co., was the reason for the decline in gold production in the State. The Holden property of the Howe Sound Co., producing gold as a byproduct of the production of copper and zinc, was again the largest gold producer in the State and supplied about 64 percent of the State total. It was followed by the Knob Hill Mines, Inc., which treated gold ore from its Knob Hill mine in Ferry County throughout 1943 by cyanidation and concentration. These two properties accounted for over 96 percent of the State total output. Other gold-producing properties included the Aurum and Valley mines, both in the Republic district, Ferry County. The total gold output was 61,002 tons in 1943 compared with 93,957 tons in 1942 and was treated as follows: 51,135 tons cyanided and 9,867 tons shipped crude to smelters. Placers yielded 116 ounces of gold.

The total production of gold, in terms of recoverable metals, from 1860 to 1943, inclusive, has been 2,022,365 ounces.

The output of recoverable silver in Washington was slightly greater in 1943 than in 1942; gains in output from mines in Ferry, Okanogan, and Whatcom Counties more than offset losses in other silver-producing counties. The principal production came from mines in Ferry, Chelan, Okanogan, and Stevens Counties; mines in Ferry and Chelan Counties produced 85 percent of the State total. Gold ore yielded 47 percent of the total silver; zinc-copper ore, 38 percent; zinc-lead ore, 11; zinc, lead, copper, silver, and gold-silver ores, and placers, the remainder. The Knob Hill property of Knob Hill Mines, Inc., in Ferry County was the largest silver producer in the State; it was followed by the Holden property of the Howe Sound Co. in Chelan County and the Kaaba property of the Kaaba-Texas Co. in Okanogan County; these three properties furnished 91 percent of the State total silver. Other producers of silver were the Aurum property in Ferry County, the Sierra Zinc Co. property in Stevens County, and the Pend Oreille Mines & Metals Co. property in Pend Oreille County. A placer mine yielded the 17 fine ounces of silver.

The total production of silver in terms of recoverable metals, from 1860 to 1943, inclusive, has been 11,962,368 ounces.

WYOMING

There was no production of gold or silver from either lode or placer mines in Wyoming in 1943, according to Charles W. Henderson and Robert V. Cushman of the United States Department of the Interior, Bureau of Mines. Gold mining in the State had virtually ceased by the end of 1942 as a result of wartime conditions. The total production of gold and silver in Wyoming, in terms of recovered metals, compiled from all sources by Charles W. Henderson, from 1867 through 1943, has been 77,914 fine ounces of gold valued at $1,835,318 and 74,632 fine ounces of silver valued at $51,752.

Distribution of the gold and silver production of the United States, in fine ounces, for 1943, as to sources of production

[Table furnished by the Bureau of Mines]

State	Gold			Silver		
	Lode mines	Placer mines		Dry and siliceous ores [1]	Lead ores [2]	Copper ores
		Floating connected-bucket dredges	All other			
	Ounces	*Ounces*	*Ounces*	*Ounces*	*Ounces*	*Ounces*
Alaska	57,472	18,554	23,557	42,736		52
Arizona	171,491		319	386,223	960,663	4,367,003
California	58,903	66,999	22,426	149,118	412,743	47,214

Pennsylvania	2,218					[4] 13,095
South Carolina	147			135		
South Dakota	106,444			32,688	3,198	
Tennessee	303					52,058
Texas	4			10,031	155	98
Utah	390,466		4	1,502,701	5,059,400	2,917,239
Vermont	17					2,721
Virginia	50				14,947	
Washington	65,128		116	174,031	195,290	1,119
Total	1,205,451	109,926	48,438	10,814,644	16,690,887	13,955,295

[1] Contains small quantity of silver from placer mines (17,121 fine ounces).
[2] Includes silver in lead, lead-copper, zinc, zinc-lead, zinc-copper, and zinc-lead-copper ores.
[3] Includes small quantity of silver from galena concentrates, a byproduct of fluorspar mining.
[4] From copper concentrates from magnetite-pyrite-chalcopyrite ore.

Refinery production (arrivals thereat) of gold mined in the several States and Territories in 1942 and 1943, with the decrease in each for the latter year

State and Territory	Gold production [1]				Decrease 1943 over 1942
	1942		1943		
	Ounces	*Value*	*Ounces*	*Value*	*Ounces*

[1] For method of calculation, see p. 42.
[2] Silver mined in New York during 1943 will appear in refinery data for 1944.

Production of gold and silver in the United States since 1792 (including Philippine Islands production received in United States)

[The estimate for 1792–1873 is by R. W. Raymond, commissioner of mining statistics, and since by Director of the Mint]

[1] Value of gold in 1934 and thereafter calculated on basis of $35 per fine ounce; prior thereto on basis of $20.67+ per fine ounce.

[2] Value of silver calculated on the basis of the average amount per ounce returned to depositors of newly mined domestic silver: in 1934 at $0.64+ per fine ounce, in 1935 at $0.71875, in 1936 at $0.7745, in 1937 at $0.7735.

[3] Value of silver calculated on the basis of the amount per fine ounce returned to depositors of newly mined domestic silver produced in 1938, $0.6464+, in 1939 $0.6787+, since 1940 at $0.7111+.

Gold and silver issued for use in arts and industries during the calendar year 1943 [1]

Item	Issued by—	Gold (value)	Silver (fine ozs.)
Bullion	Mints and assay offices	$17,502,973	382,849
Bullion in various forms	Private refiners and dealers	79,361,380	161,652,670
United States coin [2]	Banks, etc		77,344
Total		96,864,353	162,112,863
Old jewelry, plate, scrap, etc., contained in private refineries and dealers' returns, and that returned to monetary use.		10,521,000	32,172,177
Net new material used in industry		86,343,353	129,940,686

[1] For explanation of calculation, see p. 42.
[2] Estimated; the quantity of silver is equal to 100,000 silver dollars.

Mint Issue of Fine Gold Bars for Industrial Use, 1943

(On value basis; see p. 42)

The value of the fine gold bars issued for industrial use, in exchange for cash, by the United States Mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the calendar year 1943, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1943:		1943—Continued	
January	$1,772,099.08	September	$700,183.25
February	2,704,388.73	October	1,755,982.84
March	1,375,637.14	November	2,344,370.35
April	1,301,143.75	December	2,477,815.75
May	710,921.33		
June	1,716,526.48	Total	17,502,972.52
July	162,470.05		
August	481,433.77	Prior calendar year	7,996,775.42

Gold and silver furnished for use in manufactures and the arts, and classification of the materials used, since 1880

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations, prior to the fiscal year 1940, the receipt classification item of "Domestic refinery bullion" included that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that worked only old materials. Beginning with the fiscal year 1940 segregation of these items has been made in the tabulations.

Gold and silver production estimates.—These estimates consist of arrivals at United States mints and assay offices and at privately owned refineries (bullion-producing plants), of gold and silver from mines within the States and Territories of the United States, including the production of the Philippine Islands which comes to the United States for reduction. The portion of this figure representing mint receipts is on the quantity basis.

Gold and silver consumption in industry.—These estimates comprise bar sales by the mints and assay offices for industrial use (partly estimated) plus similar items issued by private refiners, dealers (and manufacturers), as reported to the Mint Bureau, plus an estimate of domestic coin melted for industrial use; from the total of these is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net new materials consumed.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with annual addition of new coinage and reported imports, and deduction

of withdrawn coin, reported exports, and an estimate for industrial use; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such; any unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, considering only coins of the type commonly in circulation, the amounts coined, and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

[1] See Annual Report for 1931 for data by individual years for 1873–1930.
[2] Includes domestic refinery product from foreign ores, etc., prior to fiscal year 1940.
[3] Beginning 1934 includes imported bars (whether of foreign bullion or of domestic bullion previously exported) acquired under the Silver Purchase Act of June 19, 1934.
[4] Includes refined bars (of whatever production source) received under Executive Proclamation of Aug. 9, 1934 (nationalized silver).
[5] Includes unfit dollars melted under act of Dec. 18, 1942.

Domestic coinage of the United States mints during the calendar year 1943

Denomination	Philadelphia mint	San Francisco mint	Denver mint	Total value	Total pieces
Silver:					
Half dollars	$26,595,000.00	$6,725,000.00	$5,673,000.00	$38,993,000.00	77,986,000
Quarter dollars	24,925,000.00	5,425,000.00	4,023,900.00	34,373,900.00	137,495,600
Dimes	19,171,000.00	6,040,000.00	7,194,900.00	32,405,900.00	324,059,000
Total, silver	70,691,000.00	18,190,000.00	16,891,800.00	105,772,800.00	539,540,600
Minor:					
Five-cent pieces	13,558,250.00	5,203,000.00	764,700.00	19,525,950.00	390,519,000

Coinage by the United States for Other Countries

The coinage for other countries during the calendar year 1943 totaled 186,682,000 pieces as compared with 307,737,000 pieces during the prior calendar year as follows:

Country	Number of pieces			
	Philadelphia	San Francisco	Denver	Total
Silver:				
Australia		39,000,000	24,000,000	63,000,000
Great Britain: Fiji Islands		1,150,000		1,150,000
Guatemala	1,650,000			1,650,000
Netherlands Government:				
Curacao	1,000,000			1,000,000
East Indies			22,000,000	22,000,000
Surinam	6,000,000			6,000,000
Salvador		1,200,000		1,200,000
Copper-zinc:				
Belgian Congo [1]	25,000,000			25,000,000
Bolivia [2]	10,000,000			10,000,000
Cuba [3]	4,000,000			4,000,000
Ecuador [4]	6,000,000			6,000,000
Great Britain: Fiji Islands [1]		1,250,000		1,250,000
Guatemala [3]	600,000			600,000
Netherlands Government: Surinam [3]	4,000,000			4,000,000
Peru [3]		12,832,000		12,832,000
Salvador [2]	5,000,000	5,000,000		10,000,000
Nickel-silver: Netherlands Government: Curacao [5]	500,000			500,000
Zinc: Bolivia	16,500,000			16,500,000
Total coinage	80,250,000	60,432,000	46,000,000	186,682,000

[1] 65 percent copper—35 percent zinc.
[2] 95 percent copper—5 percent zinc.
[3] 70 percent copper—30 percent zinc.
[4] 80 percent copper—20 percent zinc.
[5] 12 percent nickel-silver. Metals furnished by Netherlands Government.

Domestic coins, including assay pieces, withdrawn from monetary use during the fiscal year 1944

SUMMARY

Metal obtained by melting the above:		*Weights*
Gold	fine ounces	36,491.677
Silver:		
Unfit silver dollars from Treasury stock [1]	do	33,152,082.31
Other silver coin [2]	do	1,131,478.40
Nickel [3]	gross ounces	757,921.10
Bronze and copper	do	743,361.91
Copper-silver-manganese:		
5-cent pieces [3]	do	6,400.43
Monetary value of metal obtained:		*Value*
Gold [4]		$1,277,208.70
Silver:		
Unfit silver dollars from Treasury stock [1]		45,829,731.86
Other silver coin [2]		1,564,165.75
Bronze and copper		74,336.19
Loss by recoinage:		
Silver [2]		141,090.66
Bronze and copper		1,583.30
Gain by recoinage, net: Unfit silver dollars melted from stock [1]		1,171,537.78

[1] Unfit silver dollars melted under the act of Dec. 18, 1942 (Public Law 815, 77th Cong.), and the "First Deficiency Appropriation Act, 1943," approved Mar. 18, 1943.
[2] Pertains to all silver coin, except unfit silver dollars referred to in footnote 1.
[3] Metal not recoined during fiscal year 1944.
[4] At $35 per fine ounce.

NOTE.—Unfit silver dollars having a face value of $44,658,194.00 were melted during the fiscal year. The losses due to abrasion and melting amounted to $1,794,895.76 and the gain due to recoinage of the resulting metal into subsidiary silver coin at $1.38+ per fine ounce amounted to $2,966,433.54, making a net gain by recoinage of $1,171,537.78.

Domestic coins, including assay pieces, withdrawn from monetary use during the calendar year 1943

[1] For method of estimating see p. 42, and note below.
[2] Includes 44,658,194 uncurrent standard silver dollars melted for use in manufacture of subsidiary coinage under act of Dec. 18, 1942 (Public Law 815, 77th Cong.)

NOTE.—The number of standard silver dollars coined from 1878 to June 30, 1944; was 847,629,915, which added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000, the net export from November 1919 to July 1920, in movement due to the high price of silver, was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, totaled 270,232,722; those melted under the act of Dec. 18, 1942, total 52,738,933; those melted otherwise (mutilated, etc.) since 1883 numbered 230,253, and the number of Hawaiian dollars melted to June 30, 1944, was 455,329, a total disposition of 354,439,379, leaving in the United States on June 30, 1944, 494,337,395 standard silver dollars and 734,488,137 dollars in subsidiary silver coin.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

Fiscal year ended June 30—	Population (thousands)	Gold bullion and coin (thousands)	Silver coin [1] (thousands)	Per capita

[1] For 1934 and thereafter includes silver bullion revalued to $1.29+ per fine troy ounce and set up as security against silver certificates.

[2] On Jan. 31, 1934, the weight of the gold dollar was reduced from 25.8 grains of gold nine-tenths fine to 15 5/21 grains nine-tenths fine, thereby giving gold a monetary value of $35 per fine troy ounce, which compares with the previous $20.67+ per fine troy ounce. Proclamation of Jan. 31, 1934.

On December 31, 1943, the stock of domestic coin in the United States was $1,458,823,612, as shown in the table below:

Stock of domestic coin in the United States, December 31, 1943 [1]

Item	Silver	Minor	Total
Estimated stock of coin in the U. S. on Dec. 31, 1942	$1,143,476,442	$232,134,308	$1,375,610,750
Coinage executed during calendar year 1943	105,772,800	30,464,337	136,237,137
Imports, U. S. coin, calendar year 1943	293,241		293,241
Total	1,249,542,483	262,598,645	1,512,141,128
Less:			
Exports, U. S. coin, calendar year 1943	1,328,650		1,328,650
U. S. coin withdrawn from monetary use, face amount, calendar year 1943	[2] 51,888,771	95	51,888,866
U. S. coin used in industrial arts and general disappearance, estimated calendar year 1943	100,000		100,000
Total	53,317,421	95	53,317,516
Estimated stock of coin in the U. S. on Dec. 31, 1943	1,196,225,062	262,598,550	1,458,823,612

[1] For method of estimating see p. 42, and note below.

[2] Includes 49,886,959 uncurrent standard silver dollars melted for use in manufacture of subsidiary coinage under act of Dec. 18, 1942 (Public Law 815, 77th Cong.).

NOTE.—The number of standard silver dollars coined from 1878 to Dec. 31, 1943, was 847,629,915, which added to Hawaiian dollar coinage, 500,000 plus the number imported from the Philippine Islands, 150,000 and the number returned in Government transports, 496,859 equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000; the net export from November 1919 to July 1920 in movement due to the high price of silver was 28,287,142; those melted under the terms of the Pittman act of Apr. 23, 1918, total 270,232,722; those melted under act of Dec. 18, 1942, total 49,886,959; those melted otherwise (mutilated, etc.) since 1883 numbered 230,081 and the number of Hawaiian dollars melted to Dec. 31, 1942, was 455,329; a total disposition of 351,587,233, leaving in the United States on Dec. 31, 1943, 497,189,541 standard silver dollars and 699,035,521 dollars in subsidiary silver coin.

[1] Previous to 1914 (year Federal Reserve System established) figures are unrevised.
[2] Prior to 1934 gold monetary value was calculated on basis of $20.67+ per fine troy ounce; 1934 and thereafter calculated on basis of $35 per fine troy ounce.
[3] Includes coin in State and private banks as well as coin in tills and the hands of the public.
[4] Coin awaiting melting included with bullion item.

Exports of refined silver bullion from the United States since 1900

[1] Data for individual years 1873–1910 published in report of the Director of the Mint for 1931.
[2] For first 10 months only: Apr. 1, 1939, to Jan. 31, 1940.
[3] Data not available.

NOTE.—Net exports are shown with a prefixed minus sign. The quantities in the column "Net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold, (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 teals, or 285.33 rupees per 100 ounces was taken as the basis of the value of the annual imports.

Price of silver in London and in New York, 1943–44

1729	14.92	1772	14.52	1815	15.26	1858	15.38	1901	34.68		

NOTE.—From 1687 to 1832 the ratios are taken from Dr. A. Soetbeer, from 1833 to 1878 from Pixley and Abell's tables, from 1879 to 1896 from daily cabled prices from London to the Bureau of the Mint, from 1897 to 1914 from daily London quotations, and since from daily New York quotations.

FOREIGN AND WORLD MONETARY STATISTICS

The statistics of foreign countries on production and coinage of gold and silver and stocks of money, published annually in the reports of the Bureau of the Mint, are obtained, so far as practicable, directly from the governments of such countries by the representatives of the United States accredited to them.

Interrogatories covering the points on which information is sought are sent yearly to the United States Ambassadors and Ministers through the Department of State, and the replies in the form of reports are forwarded directly to the Bureau of the Mint.

Receipts of replies to the interrogatories are frequently delayed in transmission, and the available data for the calendar year under review are often incomplete. In a general way interrogatory answers are herein published as received, with the addition of equivalents. If inaccuracies are apparent, information that would warrant the making of possible corrections is often unavailable.

In the absence of dependable official returns from foreign countries, the most reliable data available are used in compiling world statistics.

A number of countries are omitted from the tables because of complete lack of information.

In connection with the table "*Monetary stock of principal countries of the world, end of calendar year 1943*"—the following qualifications should be taken in consideration:

Gold stocks—it is understood that material amounts of gold are not reported by several countries, such as amounts held in secret funds for stabilizing currencies, and those hoarded or held outside regularly reported stocks.

Silver stocks—The amount of silver in circulation in many countries is not obtainable.

Population estimates, not currently obtainable for 1943 due to wartime population shifts, and other reasons, are the latest available, but do not all relate to the same period.

Totals for the various stocks of money are omitted because of incomplete data for some countries, and complete lack of data for others.

MONETARY STOCK OF PRINCIPAL COUNTRIES OF THE WORLD, END OF CALENDAR YEAR 1943 (SUBJECT TO REVISION)

[Stated in United States money (000 omitted), except paper circulation which is stated in monetary unit of issuing country (000 omitted). $1=15\frac{5}{21}$ grains of gold 9/10 fine; i. e., an ounce of fine gold=$35. Population, (000 omitted)]

Country	Monetary unit			Gold stock (conversions to United States equivalent at legal parity unless otherwise indicated)			Monetary silver stock in government treasuries, in banks, and in circulation (United States equivalent of reported face amount at exchange rate)	Paper circulation in monetary unit of issuing country	Population	Per capita		
	Name	United States equivalent		In central banks, government treasuries, and earmarked abroad	Other	Total gold stock				Gold	Silver	Paper
		On gold basis as defined by laws effective Dec. 31, 1943, so far as known	At average exchange rate during December 1943 (official rate unless otherwise indicated)

See footnotes at end of table.

[1] Does not include gold held by Foreign Exchange Control Board. (Canada.)
[2] Source: Federal Reserve Bulletin, April 1944. (Mexico.)
[3] Canadian coin and currency also circulate. Amount not available. (Newfoundland.)
[4] Partly estimated. Consists of British and British West Indian money. (Br. W. Indies.)
[5] Controlled exchange rate. (Costa Rica, Uruguay, Venezuela.)
[6] Source: League of Nations Bulletin, May 1944. (Costa Rica, Iraq, Japan.)
[7] Consists of Cuban and United States money which circulate 1 to 1. (Cuba.)
[8] Silver, Dominican and United States; paper, United States. (Dominican Republic.)
[9] Gold valued at 0.21006 gram fine per franc or $0.2364. (Martinique.)
[10] United States coin and currency also circulate. (Haiti, Panama.)
[11] Silver, Honduras and United States. (Honduras.)
[12] Stated in United States dollars converted at rate of 5 cordobas per dollar. (Nicaragua.)
[13] Gold valued at 87.50 colones per fine ounce at current exchange ($0.40). Silver includes United States dimes circulating as 25 centavo denomination. (El Salvador.)
[14] Free exchange rate. (Peru, El Salvador.)
[15] Source: Federal Reserve Bulletin, Sept. 1944. (Argentina, Iran, Turkey.)
[16] Notes, including coin. (Argentina, Paraguay.)
[17] Legal exchange rate 42 bolivianos per dollar as of Feb. 12, 1943. (Bolivia.)
[18] Under decree law of Oct. 6, 1942, the cruzeiro (divided into 100 centavos) became the unit of currency, replacing the milreis, but with value unchanged. (Brazil.)
[19] Gold reserves stated in United States dollars, valued by Bank of Brazil at $1,128.088 per kilogram fine. (Brazil.)
[20] Silver (estimated) British and British Guiana; paper, British Guiana. (Br. Guiana.)
[21] Gold valued at 14.10 sucres per dollar. (Ecuador.)
[22] The guarani established as monetary unit under Decree Law #655 of Oct. 5, 1943, effective Nov. 8, 1943. Not defined in terms of gold. Divided into 100 equal parts called "centimos." (Paraguay.)
[23] Gold valued partly at legal parity and partly at current exchange rate. (Peru.)
[24] Silver stock includes some nickel coin. (Venezuela.)
[25] Source of data for European countries: Federal Reserve Bulletin, Sept. 1944 and League of Nations Bulletin, May 1944—except for United Kingdom from the Bankers Magazine (London), Feb. 1944, and from official reports for Eire and Iceland.
[26] July, provisional. (Bulgaria.)
[27] One kuna=1 Yugoslavian dinar. Notes are issue of Croat State Bank. (Croatia.)
[28] Includes notes of National Bank of Bohemia and Moravia, and of National Bank of Slovakia. (Czechoslovakia.)
[29] Includes notes of Reichbank and of Rentenbank. (Germany.)
[30] Sept., provisional. (Greece.)
[31] Represents gold coin and bullion in issue and banking departments of Bank of England, valued at 168 shillings per ounce. (United Kingdom.)
[32] Source: The Statist (London), Jan. 22, 1944. Silver is rupee coin in Reserve Bank of India. (India.)
[33] Valued at 2.18½ Syro-Lebanese pounds per dollar. (Syria & Lebanon.)

Production of gold and silver in the world since the discovery of America

[From 1493 to 1885 is from a table of averages for certain periods, compiled by Dr. Adolph Soetbeer; for the years since, the production is the annual estimate of the Bureau of the Mint]

Period	Gold				Silver				Percentage of production			
	Annual average for period		Total for period		Annual average for period		Total for period		By weight		By value

[1] Valued, prior to 1934, at $20.67+ per fine ounce; 1934 and thereafter, at $35 per fine ounce.

[2] Valued, prior to 1701, at $1.38 per fine ounce, which corresponds with a commercial ratio of silver to gold of approximately 15 to 1, the ratio which prevailed for over 100 years subsequent to 1687, as per tabulation elsewhere in this volume. From 1701 to 1840 the value corresponds with the average ratios of silver to gold as per the tabulation elsewhere in this volume. From 1841 the annual averages per fine ounce in London are used except for the years 1915 to 1921, and 1931 to 1941, when New York prices are used. Tabulations of silver quotations appear elsewhere in this volume.

REPORT OF THE DIRECTOR OF THE MINT ON THE OPERATIONS OF THE MINT SERVICE FOR THE FISCAL YEAR 1941

REPORT OF THE DIRECTOR OF THE MINT ON THE
OPERATIONS OF THE MINT SERVICE
FOR THE FISCAL YEAR 1941

ANNUAL REPORT OF THE DIRECTOR OF THE MINT

TREASURY DEPARTMENT,
BUREAU OF THE MINT,
Washington, D. C., September 3, 1941.

SIR: In compliance with the provisions of section 253, title 31, United States Code, I have the honor to submit herewith a report covering the operations of the mints and assay offices of the United States for the fiscal year ended June 30, 1941, being the Sixty-ninth Annual Report of the Director of the Mint. There is also submitted for publication in connection therewith the annual report of this Bureau upon the production and consumption of the precious metals in the United States for the calendar year 1940.

OPERATION OF THE MINTS AND ASSAY OFFICES

Institutions of the Mint Service

During the fiscal year ended June 30, 1941, seven mint institutions were in operation: Coinage mints at Philadelphia, San Francisco, and Denver; assay office at New York, which handles the major portion of the gold imported and exported, and its auxiliary silver bullion depository at West Point; gold bullion depository at Fort Knox, Ky.; mint at New Orleans, conducted as an assay office; and assay office at Seattle. The two last-named institutions are, in effect, merely bullion-purchasing agencies and also serve the public by making assays of ores and bullion. Electrolytic refineries are maintained at the New York, Denver, and San Francisco institutions.

Coinage

Domestic coin manufactured during the fiscal year ending June 30, 1941, amounting to 1,599,349,007 pieces, exceeded the production of any previous fiscal year in the history of the Government. The nearest approach to this production was 768,090,830 pieces in the fiscal year 1940; and during the fiscal year 1937, 760,915,737. As in previous years, the coin most largely produced was the 1-cent piece. The production in 1941, in amount $74,987,420, consisted of 282,675,357 subsidiary silver coins, $49,211,552; 315,228,278 nickel coins, $15,761,414; and 1,001,445,372 bronze coins, $10,014,454.

Coinage for foreign governments amounted to 170,672,500 pieces, compared with 35,695,000 pieces during the prior year. The foreign coinage consisted of silver, nickel, and bronze coins for the Netherlands East Indies, Dominican Republic, Indochina, and Liberia.

The grand total of domestic and foreign coins made in 1941 amounted to 1,770,021,507 pieces, an increase of 966,235,677 over the prior year.

Bullion Deposit Transactions

The number of bullion deposit transactions during the year totaled 48,147, including 75 inter-mint-service transactions, as compared with 51,780 and 75, respectively, during the prior year. The deposit transactions required 74,716 assay determinations, which compares with 81,425 assay determinations during the prior year.

Transfer of Bullion for Long-Term Storage

Refined gold bullion having a value of approximately $9,056,000,000 was transferred during the fiscal year 1941 from the New York Assay Office to the bullion depository at Fort Knox, Ky., and approximately $317,600,000 in refined gold bullion was transferred from the mint at San Francisco, Calif., to the mint at Denver Colo., for long-term storage.

During the year 97,372 bars containing 101,970,173 fine ounces of silver were transferred from the New York Assay Office to the silver bullion depository at West Point, N. Y., for long-term storage. The depository now contains a total of 1,542,694,885 fine ounces of silver bullion, all of which was transferred from Government buildings and rented quarters in New York City since completion of the depository in 1938.

Gold Operations

Gold acquisitions by the mints and assay offices during the year, stated on the usual basis of classified melted receipts, amounted to $3,529,187,190; receipts from other Treasury offices of domestic coin melted during the year amounted to $793,132; and transfers between mint-service institutions amounted to $9,408,295,799. These transactions total $12,938,276,121, compared with $3,235,067,233 for the prior year.

The acquisitions include $166,877 of gold received at $20.67+ per fine ounce. The increment on this gold amounted to $115,663.

Silver Operations

The Government's acquisitions of silver during the year totaled 163,328,911 fine ounces, at an average cost of 51.1 cents per fine ounce and a total cost of $83,464,650. The acquisitions consist of the following:

Item	Amount (fine ounces)	Cost
Newly mined domestic silver	71,933,816.47	$51,116,087.80
Purchase Act silver	90,221,115.33	31,949,309.33
Silver contained in gold bullion deposits, etc.	577,319.45	200,031.29
Silver received in exchange for Government-stamped bars	596,660.20	199,221.77
Total	163,328,911.45	83,464,650.19

United States coin received for recoinage totaled 2,727,908 fine ounces, with a recoinage value of $3,771,085. Silver deposited by other governments, for foreign coinage, totaled 5,854,031 fine ounces. Silver transfers between mint-service institutions totaled 102,063,704 fine ounces. These items plus the silver acquired during the year

brought the total transactions in silver to 273,974,554 fine ounces, compared with the prior year's total of 262,269,416.

During the year 1941, $82,747,474 of silver certificates were issued against 64,000,000 fine ounces of silver bullion valued at $1.29+ per fine ounce, the statutory monetary value of silver. Such silver had been acquired at an average price of 62+ cents per ounce. The difference between the cost of the silver held to secure such certificates and the monetary value of such silver is $43,027,216, and this amount constitutes seigniorage.

The open-market price of silver in New York (mean of bid and asked) during the fiscal year 1941 averaged $0.35062, which price prevailed, without change, during the entire fiscal year.

For newly mined domestic silver a return to the depositor of $0.7111+ per fine ounce, established by the Act of July 6, 1939, prevailed during the fiscal year 1941.

Refineries

The electrolytic refineries produced during the year 7,508,837 fine ounces (257.4 tons of electrolytically refined gold bullion and 5,073,331 fine ounces (173.9 tons) of silver bullion. During the prior year the quantities produced were 5,060,586 fine ounces (173.5 tons) of gold and 2,253,971 fine ounces (77.3 tons) of silver.

Stocks of unrefined gold and silver bullion in mint institutions increased during the fiscal year 1941 by approximately 78.1 tons, to 2,151.1 tons. The increase in 1940 was about 309 tons.

Stock of Coin and Monetary Bullion in the United States

On June 30, 1941, the estimated stock of domestic coin in the United States was $1,193,690,047, of which $547,077,816 was standard silver dollars, $447,247,860 subsidiary silver coin, and $199,364,371 minor coin.

The stock of gold bullion, including coin, held in the Treasury on the same date was valued at $22,624,197,712, an increase of $2,661,106,843, and the stock of silver bullion was 2,491,134,457 fine ounces, an increase of 125,965,283.

Production of Gold and Silver

Domestic gold production during the calendar year 1940 was 6,003,105 fine ounces, with a monetary value of $210,108,700, compared with 5,611,171 fine ounces, with a monetary value of $196,391,000 in 1939, which was the previous year of largest production.

Domestic silver production during the calendar year 1940 totaled 69,585,734 ounces. This compares with 65,119,513 ounces for 1939 and with the record production of 74,961,075 fine ounces for 1915.

Industrial Consumption of Gold and Silver

Gold consumption in the industrial arts during the calendar year 1940 is estimated at $41,178,387. Gold returned from industrial use amounted to $27,872,355. These items give a net industrial consumption of new gold during the year of $13,306,032, compared with $7,460,600 during the calendar year 1939.

Silver used in the arts is estimated at 67,062,632 fine ounces, of which 22,563,729 fine ounces were new material.

Compared with the prior year, there was an increase in gold consumption of approximately 68,000 ounces and a decrease in silver consumption in industry of about 2,500,000 ounces.

Appropriations, Expenses, and Income

Regular appropriations available for the mint service during the fiscal year 1941 totaled $2,720,540; the Deficiency Act of June 27, 1940 provided $1,608,000 for special movements of bullion during the fiscal year 1940, to remain available until June 30, 1941, none of which was obligated during the fiscal year 1940 leaving the entire amount available for the fiscal year 1941; the First Supplemental Civil Functions Appropriation Act approved October 9, 1940, provided $1,335,380; the Additional Urgent Deficiency Appropriation Act approved May 24, 1941, provided an additional $270,500, and reimbursements to appropriations for services rendered amounted to $773,233 making a total of $6,707,653.

Expenses amounted to $6,871,718, of which $6,642,675 was chargeable to appropriations and $229,043 chargeable to income.

The regular income realized by the Treasury from the mint service aggregated $51,653,974, of which $46,467,922 was seigniorage. The seigniorage on subsidiary silver coin was $23,346,561, and on minor coin, $23,121,361. Extraordinary income aggregated $43,142,879, of which $43,027,216 was seigniorage on silver bullion revalued to $1.29+ per ounce, and $115,663 was the increment to $35 per ounce on revalued gold.

General Activities

The number and value of deposits, transfers, gross income, and expenses for the fiscal year 1941, and number of employees on June 30, 1941, at each institution are shown in the following table:

Deposits of gold and silver, income, expenses, and employees, by institutions, fiscal year 1941

Institution	Number of bullion deposit transactions	Number of assay determinations on bullion deposits	Monetary value of gold and silver receipts, including transfers [1]	Gross regular income	Gross expenses	Excess of income (+) or of expenses (−)	Employees, June 30, 1941
Philadelphia	5,854	7,973	$28,519,529	$32,695,012	$2,325,908	+$30,369,104	1,207
San Francisco	20,039	23,934	401,585,472	8,580,624	1,106,289	+7,474,335	487
Denver	5,084	8,524	386,677,368	7,516,580	764,439	+6,752,141	392
New York	11,335	27,594	3,249,912,475	2,762,959	2,393,603	+369,356	222
New Orleans	1,608	1,606	701,170	5,318	26,770	−21,452	10
Seattle	4,227	5,085	30,060,200	93,481	49,655	+43,826	19
Fort Knox			9,055,884,652		74,527	−74,527	38
Total	48,147	74,716	13,153,340,866	51,653,974	6,741,191	+44,912,783	2,375
Bureau of the Mint					130,527	−130,527	53

Prior fiscal year	51,780	81,425	3,574,430,723	30,166,882	2,783,988	+27,382,894	1,048

[1] Includes inter-institution transactions, $9,408,416,726. Omits silver having a monetary value of $131,840,224 transferred from the New York Assay Office to its auxiliary silver bullion depository at West Point, N. Y.

Domestic Coinage

Details of the coinage executed during the fiscal year ended June 30, 1941, follow:

Denomination	Philadelphia Mint	San Francisco Mint	Denver Mint	Total value	Total pieces
Silver:					
Half dollars	$7,331,847.00	$2,383,000.00	$1,876,200.00	$11,591,047.00	23,182,094
Quarter dollars	14,769,365.25	2,410,000.00	2,272,600.00	19,451,965.25	77,807,861
Dimes	11,401,540.20	2,829,000.00	3,938,000.00	18,168,540.20	181,685,402
Total silver	33,502,752.45	7,622,000.00	8,086,800.00	49,211,552.45	282,675,357
Minor:					
5-cent nickels	10,143,563.90	2,422,750.00	3,195,100.00	15,761,413.90	315,228,278
1-cent bronze	8,032,953.72	968,100.00	1,013,400.00	10,014,453.72	1,001,445,372
Total minor	18,176,517.62	3,390,850.00	4,208,500.00	25,775,867.62	1,316,673,650
Total domestic coinage	51,679,270.07	11,012,850.00	12,295,300.00	74,987,420.07	1,599,349,007
Prior year:					
Total coinage, value	$29,870,584.05	$4,376,300.00	$5,747,800.00	$39,994,684.05	
Total coinage, pieces	616,210,630	92,770,000	59,110,200		768,090,830

Coinage by the United States for Other Countries

The coinage for other countries during the fiscal year 1941 totaled 170,672,500 pieces, as compared with 35,695,000 pieces during the prior fiscal year, as follows:

Country	Philadelphia	San Francisco	Total
	Pieces	*Pieces*	*Pieces*
Silver: Netherlands East Indies	58,800,000	33,560,000	92,360,000
Nickel:			
Liberia	1,312,500		1,312,500
Indochina		75,000,000	75,000,000
Total nickel	1,312,500	75,000,000	76,312,500
Bronze: Dominican Republic	2,000,000		2,000,000
Total coinage	62,112,500	108,560,000	170,672,500
Prior fiscal year, total coinage	10,425,000	25,270,000	35,695,000

Mint Issue of Fine Gold Bars for Industrial Use

[On value basis; see p. 48]

The value of the fine-gold bars issued for industrial use, in exchange for cash, by the United States Mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the fiscal year 1941, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1940:		1941—Continued.	
July	$13,619.55	March	$32,979.54
August	15,180.20	April	19,880.27
September	13,108.35	May	24,384.77
October	13,904.69	June	92,880.88
November	23,928.83		
December	17,768.01	Total	307,134.36
1941:			
January	18,725.15	Prior fiscal year	335,665.41
February	20,774.12		

Receipts and Disbursements of Gold Bullion and Balances on Hand

Receipts and disbursements of gold bullion during the fiscal year 1941, and balances on hand June 30, 1941, as compared with June 30, 1940, are shown in the following table:

Institution	Balance on hand June 30, 1940	Receipts during fiscal year 1941 (details below) [1]	Total	Disbursements during fiscal year 1941 (details below) [1]	Balance on hand June 30, 1941
Philadelphia	$6,445,632.94	$4,368,610.27	$10,814,243.21	$3,944,035.24	$6,870,207.97
San Francisco	1,304,607,931.92	357,823,886.07	1,662,431,817.99	317,637,039.16	1,344,794,778.83
Denver	4,118,502,457.18	384,275,824.08	4,502,778,281.26	20,775.74	4,502,757,505.52
New York	9,005,650,194.50	3,855,757,435.76	12,861,407,630.26	10,673,924,323.12	2,187,483,307.14
New Orleans	226,316.59	693,540.35	919,856.94	714,676.70	205,180.24
Seattle	3,620,061.74	30,024,481.59	33,644,543.33	30,261,549.12	3,382,994.21
Fort Knox	5,523,706,735.45	9,055,884,651.77	14,579,591,387.22		14,579,591,387.22
Total	19,962,759,330.32	13,688,828,429.89	33,651,587,760.21	11,026,502,399.08	22,625,085,361.13

DETAILED RECEIPTS OF GOLD BULLION

Institution	Deposits (including coin melted)	Surplus bullion (including shipment gains)	Transfers from mints and assay offices	Increment to $35 per ounce on receipts at $20.67+	Total
Philadelphia	$4,355,308.83	$10,936.67		$2,364.77	$4,368,610.27
San Francisco	357,604,826.33	115,544.70	$1,750.00	101,765.04	357,823,886.07
Denver	35,688,556.87	23,189.48	348,560,170.33	3,907.40	384,275,824.08

Total	1,617,986,855.82	9,408,294,523.63	221,019.63	11,026,502,399.08

[1] Includes transfers.

Minor Coins Outstanding

The following statement shows the coinage of minor coins, by denominations, the amount on hand at the mints, issued, melted, and outstanding June 30, 1941. Minor coins were first manufactured at the Philadelphia Mint in 1793, at the San Francisco Mint in 1908, and at the Denver Mint in 1911.

Item	Coined	On hand at mints unissued	Issued	Melted	Amount issued and outstanding June 30, 1941
Copper half cents [1]	$39,926.11		$39,926.11	$2.04	$39,924.07
Copper cents	1,562,887.44		1,562,887.44	383,653.06	1,179,234.38
Copper-nickel cents	2,007,720.00		2,007,720.00	809,137.28	1,198,582.72
Bronze cents	88,073,854.98	$964,980.25	87,108,874.73	1,965,892.70	85,142,982.03
Bronze 2 cents	912,020.00		912,020.00	344,098.84	567,921.16
Nickel 3 cents	941,349.48		941,349.48	287,974.44	653,375.04
Nickel 5 cents	125,018,596.60	955,150.00	124,063,446.60	11,762,132.40	112,301,314.20
Total	218,556,354.61	1,920,130.25	216,636,224.36	15,552,890.76	201,083,333.60

[1] There is no record of the melting of the old copper half cents, but it is believed that few, if any, are now in circulation.

Proof Bullion (1.000 fine)

In order to maintain uniformity in assay of bullion in the offices of the mint service, all proof gold and proof silver are made at one institution and furnished to other institutions when required. Proof gold is made at the New York Assay Office, while the Philadelphia Mint makes proof and inquartation silver. During the fiscal year 1941 other mints and assay offices were furnished 116 ounces of proof gold, 200 ounces of proof silver, and 4,196 ounces of inquartation silver.

Operations of the Melting and Refining and of the Coining Departments, Fiscal Year 1941

The aggregate quantity of metals operated upon in the above-mentioned departments of the coinage mints and assay office at New York during the fiscal year ended June 30, 1941, was 104.3 million fine ounces of gold and 149.3 million fine ounces of silver. There were also operated upon at the coinage mints 493.5 million ounces of minor coinage metal. The figures in the table following are based on the figures obtained at the settlements of the accounts.

Legal limits of wastage on the whole amount delivered by the superintendent to operative offices, as prescribed in section 355, title 31, United States Code, are as follows: Melter and refiner—gold, 0.001; silver, 0.0015; coiner—gold 0.0005; silver, 0.001.

Wastage of Coinage Metal and Loss on Sale of Sweeps

The value of metals wasted in the operative departments during the fiscal year ended June 30, 1941, was $31,923.35. A loss of $4,749.20

occurred from the difference between the assay value of the bullion contained in sweeps sold and the amount received for the same. Details are given in the following table:

Item	Mint at—			Assay office at New York	Total
	Philadelphia	San Francisco	Denver		
Silver wastage:					
Melting and refining department					
Coining department	$8,144.03	$3,818.67	$190.19		$12,152.89
Nickel wastage:					
Melting and refining department	5,827.29	1,358.75	845.25		8,031.29
Coining department	509.17	680.42	50.14		1,239.73
Bronze wastage:

[1] Conducted as an assay office since 1910.
[2] Allotment made from a lump construction appropriation.

Assay Commission's Annual Test of Coin for 1940

Section 363, title 31, United States Code, provides for an annual test of the domestic coinage executed during each calendar year by a commission, of whom part are ex officio members, the others, who served without compensation, being appointed by the President. The

purpose is to secure a due conformity in the gold and silver coins to their respective standards of fineness and weight. The Commission, which met at the Philadelphia Mint February 12, 1941, reported the following results of their examination of the 1940 coinage:

In accordance with section 3539 of the Revised Statutes, your committee on counting reports that the packages said to contain the pieces reserved by the several mints for the trial of coins were delivered to us by the Superintendent of the Mint at Philadelphia.

A substantial number of packages were selected from the deliveries of each month of all denominations coined, and the coins contained therein were counted and found to agree with the number designated on each envelope.

The committee on assaying has completed the assays on samples taken from different lots of coin representing all denominations coined during the year 1940 by the United States mints at Philadelphia, San Francisco, and Denver.

No gold was coined at any of the mints during the year 1940.

The results of the assays upon coins and mass melts made from coins is satisfactory, being within the legal limits of tolerance, which is three one-thousandths for silver coins.

The highest and lowest assays on individual silver coins selected were as follows:

	Highest	*Lowest*
Philadelphia Mint	900. 2	898. 2
Denver Mint	901. 1	897. 3
San Francisco Mint	899. 8	898. 4
Mass melts:		
Philadelphia Mint	899. 3	
Denver Mint	899. 1	
San Francisco Mint	899. 5	

The committee on weighing reports that it selected at random a total of 124 coins, consisting of 74 coins from the Philadelphia Mint, 20 coins from the Denver Mint, and 30 coins from the San Francisco Mint. These coins were taken from 121 different deliveries.

The coins were weighed directly against a set of coin weights and grain weights tested and certified by the National Bureau of Standards, and delivered under seal to the chairman of the committee on weighing.

All coins were weighed to an accuracy of 0.01 grain, and it is to be noted that all coins weighed were found to be well within the tolerance allowed by law.

The following table shows the deviation of the heaviest and the lightest coins of each denomination from each mint, as found from the individual weighings:

Denomination	Legal deviation allowable	Actual deviation					
		Philadelphia		Denver		San Francisco	
		Heavy	Light	Heavy	Light	Heavy	Light
	Grains	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*	*Grains*
Half dollar	1. 5	0. 74	1. 05	----------	----------	0. 72	0. 95
Quarter dollar	1. 5	1. 01	. 80	0. 36	0. 20	. 86	1. 21
Dime	1. 5	. 40	. 70	. 46	. 50	. 50	. 37

Considering as a group the 124 coins weighed, the average deviation with regard to sign was 0.002 grain, that is, of all the coins weighed the excess of the heavy coins was off-set by the deficiency of the light coins, on the average within 0.002 grain. The average deviation without regard to sign was 0.31 grain.

The foregoing report, covering the operations of the mints and assay offices of the United States for the fiscal year ending June 30, 1941, is respectfully submitted.

NELLIE TAYLOE ROSS,
Director of the Mint.

Hon. HENRY MORGENTHAU, Jr.,
Secretary of the Treasury.

421420—41——2

REPORT OF THE DIRECTOR OF THE MINT ON THE PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1940

REPORT OF THE DIRECTOR OF THE MINT ON THE
PRODUCTION AND CONSUMPTION OF GOLD AND
SILVER IN THE UNITED STATES DURING
THE CALENDAR YEAR 1940

REPORT ON PRODUCTION AND CONSUMPTION OF GOLD AND SILVER IN THE UNITED STATES DURING THE CALENDAR YEAR 1940

INTRODUCTION

The official estimate of the production of gold and silver in the United States is made by the Bureau of the Mint with the cooperation of the Bureau of Mines, the latter making a mine canvass in each State and the former working backward from mint deposits through refineries, smelters, and other reduction works to the mine production estimate made by the former. The official estimate represents the material received at mint service offices and private refineries. The difference between this estimate and the mine production estimate is almost entirely due to the time element involved in the reducing processes, since differences for series of years are shown by comparison to practically offset each other. The two systems thus verify and support each other.

The gold production of the United States, including its insular dependencies, for the calendar year 1940 is estimated to have been 6,003,105 fine ounces, valued at $210,108,700, and the production of silver is estimated at 69,585,734 fine ounces, valued at $49,483,189. A comparison of these figures with those of 1939 indicates about 392,000 fine ounces increase in production of gold and approximately 4,466,000 ounces increase in silver production.

In continental United States, Utah increased its output of gold in 1940 more largely than any of the other States, its increase being about 86,000 fine ounces to a total of 352,000 fine ounces. Idaho, Nevada, Oregon, and California also increased their gold output, the increases being, respectively, about 30,000, 29,000, 22,000, and 19,000 fine ounces. The increase in the Philippine Islands was larger than that of Utah, it amounting to 150,000 fine ounces, giving the year's total of over 1,140,000 fine ounces, which exceeded that of any State except California. Alaska's increase amounted to nearly 86,000 fine ounces, and its total output for the year was nearly 757,000 fine ounces.

The 1940 silver production increased more largely in Montana than in any other State of the Union—by over 3,200,000 fine ounces as compared with 1939. The largest reduction occurred in Arizona, over 1,300,000 fine ounces. Idaho continued as the State of largest silver output, its total being about 17,470,000 fine ounces, with Montana second in rank, over 12,100,000 fine ounces.

A brief review of mining conditions, for which acknowledgments are made to the United States Bureau of Mines, follows. The production figures therein differ, as explained above, from the Bureau of the Mint production estimates. Further information concerning same can be obtained by those interested by addressing the Bureau of Mines at Washington.

ALASKA

The value of the gold output of Alaska in 1940 (the largest in the history of the Territory) was more than 99 percent of the total gross value of the gold, silver, copper, and lead produced. Production of gold in terms of recovered metal totaled 755,970 fine ounces valued at $26,458,950, an increase of 12 percent over 1939, according to Charles W. Henderson and S. A. Gustavson, of the United States Department of the Interior, Bureau of Mines.

As there are no smelters or refineries in Alaska, most of the gold produced is sent in the form of bullion to the Seattle Assay Office or the San Francisco Mint either directly by the operator or through banks or bullion buyers. The remaining gold was recovered chiefly from high-grade ore and concentrates sent to the Tacoma (Wash.) and Selby (Calif.) smelters of the American Smelting & Refining Co.

Placer operations produced 72 percent of the total gold output in 1940 (floating dredges 47 percent and all other types of placers 25 percent).

Forty-nine floating connected-bucket dredges were in operation in Alaska in 1940, five more than in 1939. By far the largest operator of this type of equipment was the United States Smelting, Refining & Mining Co., with three dredges working in the Nome district and eight dredges working in the Fairbanks (part of the Tanana) district; hydraulic giants and special mechanical equipment were used in moving overburden by this company. Some of the other large producers of gold using floating connected-bucket dredges were: The New York Alaska Gold Dredging Co., in the Tuluksak-Aniak region; Arctic Circle Exploration, Inc., in the Fairhaven-Seward Peninsula region; Kougarok Consolidated Placers, Inc., in the Kougarok-Seward Peninsula region; and Alluvial Golds, Inc., C. J. Berry Dredging Co., and the Gold Placers, Inc., in the Circle-Yukon River Basin region.

Other types of placer operations (dragline floating and dry-land dredge, hydraulic, drift mining, and sluicing) produced 187,067 fine ounces of gold in 1940, an increase of 15 percent over 1939. Again this increase was due to the more extensive use of mechanical equipment. Some of the larger producers were: The Goodnews Bay Mining Co. (in the Goodnews Bay district), Topkuk Chief Mining Co. (in the Bluff district), Cripple Creek Mining Co. (in the Innoko district), H. Roy Hunter (in the Marshall district), and Parker Bros. (in the Tolovana district).

The production of gold from the 73 operating lode mines totaled 214,097 fine ounces (all from dry and siliceous gold ore) in 1940, an increase of 2 percent over 1939. The Alaska Juneau Gold Mining Co. (in the Juneau district), the largest producer of silver and lead and second only to the United States Smelting, Refining & Mining Co. in production of gold in the Territory, produced 122,469.96 fine ounces of gold in 1940, or 57 percent of the total production of lode gold. Sixty-six mines in Alaska in 1940 operated amalgamation or cyanidation plants; none of these (with the exception of the Alaska Juneau) treated more than 75 tons daily on the average. The largest of these operations include: The Alaska-Pacific Consolidated Mining Co. and Conwest Exploration Co., operating the Willow Creek mines, in the Willow Creek district; Hirst-Chichagof Mining Co., in the Chichagof Island district; the Cleary Hill Mines, Inc., and the United States

Smelting, Refining & Mining Co., operating the McCarty mine, in the Fairbanks district.

Silver (all a byproduct of gold mining) produced in 1940 in terms of recoverable metal totaled 191,679 fine ounces, a decrease of 5 percent from 1939. This decrease was due almost entirely to the decrease in production of silver from the Alaska Juneau Gold Mining Co., that company's production in 1940 representing 53 percent of the total silver output from Alaska.

ARIZONA

The output of recoverable gold, silver, copper, lead, and zinc from mines in Arizona in 1940 was valued at $82,167,759 compared with $72,616,408 in 1939, an increase of $9,551,351 (13 percent) according to G. E. Woodward and Paul Luff, of the United States Department of the Interior, Bureau of Mines. There were substantial increases in both quantity and total value of copper, lead, and zinc in 1940 but decreases in gold and silver. The output of copper increased 7 percent; lead, 23 percent; and zinc, 130 percent. The output of gold declined 7 percent and silver 10 percent. Nearly 44 percent of the gold and 63 percent of the silver produced in Arizona in 1940 were recovered from copper ore; copper ore yielded gold, silver, copper, and lead valued at $70,731,122 in 1940, or 86 percent of the State total and an increase of $8,503,537 over 1939. Of the total ore treated in Arizona in 1940, 94 percent was copper ore, 4 percent was dry and siliceous gold ore, and the remainder was mostly zinc-lead ore, dry and siliceous gold-silver ore, and zinc-copper ore. The output of copper ore increased from 17,468,926 tons in 1939 to 20,284,826 tons in 1940, but dry and siliceous ores declined from 1,042,004 tons to 928,448. There were substantial increases in the output of zinc-lead ore and zinc-copper ore.

The output of recoverable gold from lode mines and placers in Arizona in 1940 was 294,807 ounces valued at $10,318,245 compared with 316,453 ounces valued at $11,075,855 in 1939. Gold recovered from copper ore decreased from 139,527 ounces in 1939 to 128,720 in 1940, owing chiefly to the decline in output of gold from the Verde district, and gold from dry and siliceous ores decreased from 158,398 ounces to 144,461 as a result of substantial decreases in gold ore treated by cyanidation in the Oatman section of the San Francisco district and in the Weaver district in Mohave County. Lode mines produced 288,566 ounces of gold in 1940 and placers 6,241 ounces compared with 310,044 ounces and 6,409 ounces, respectively, in 1939. Dry and siliceous ores yielded 49 percent of the total gold in 1940, copper ore 44 percent, and zinc-lead ore 5 percent; the remaining 2 percent came from other base ores and from placers. About 42 percent of the total placer gold was recovered by dragline dredging at properties on Lynx Creek and Big Bug Creek in Yavapai County. Dry and siliceous material treated at amalgamation and cyanidation mills increased from 738,943 tons in 1939 to 746,963 in 1940, but the output of gold (in bullion and concentrates) decreased from 112,166 ounces to 107,137. Ore treated by straight concentration increased from 14,017,765 tons in 1939 to 15,941,271 in 1940, but the gold in the concentrates produced decreased from 76,415 ounces to 67,337. Crude ore shipped to smelters decreased from 1,922,003 tons in 1939 to 1,685,544 in 1940, and gold therefrom declined from 121,463 ounces

to 114,092. The Phelps Dodge Corporation continued to be the largest producer of gold in Arizona; the company operated its copper mines at Bisbee, Ajo, Jerome, and Morenci throughout the year but shipped 7 percent less crude copper ore and concentrates to the smelter in 1940 than in 1939. The Denn mine at Bisbee and the Magma mine at Superior were also large producers of gold from copper ore. The Mammoth-St. Anthony property in Pinal County, the Gold Road, Gold Standard, and Pilgrim mines in Mohave County, the Octave, Alvarado, Congress, Golden Turkey, and Yarnell mines in Yavapai County, and the Vulture mine in Maricopa County were large producers of gold from dry and siliceous ores (chiefly gold ore treated by cyanidation). The Iron King mine in Yavapai County and the Tennessee mine in Mohave County were large producers of gold from zinc-lead ore. The chief gold-producing districts in Arizona in 1940 were the Warren, San Francisco, Ajo, Old Hat, Verde, and Weaver (Yavapai County).

The total production of gold in Arizona, in terms of recovered metal, from 1860 to 1940, inclusive, has been 9,858,897 ounces.

The output of recoverable silver in Arizona was 7,075,215 ounces valued at $5,031,264 in 1940 compared with 7,824,004 ounces valued at $5,310,839 in 1939. Most of the loss was due to the decreased output of siliceous ore and to the lower silver content of copper ore. Silver from copper ore decreased from 4,820,469 ounces in 1939 to 4,463,702 in 1940 and that from siliceous ores from 1,939,317 ounces to 1,378,318. Silver from zinc-lead ore increased from 790,855 ounces in 1939 to 970,561 in 1940 and that from zinc-copper ore from 182,800 ounces to 191,800. Copper ore yielded 63 percent of the total silver in 1940; dry and siliceous ores, 19 percent; zinc-lead ore, 14 percent; and zinc-copper ore, 3 percent. In 1940 the four properties (Copper Queen, United Verde, New Cornelia, and Morenci) of the Phelps Dodge Corporation produced 49 percent of the State total silver. Other large silver producers in 1940 were the Magma, Shattuck Denn, Reymert, Trench, Iron King, and Montana mines. The chief silver-producing districts in Arizona in 1940 were the Warren, Verde, Pioneer (Superior), Harshaw (Patagonia), Ajo, Wallapai (Chloride), Oro Blanco (Ruby), and Big Bug.

Total production of silver in Arizona, in terms of recovered metal, from 1860 to 1940, inclusive, has been 261,189,778 ounces.

CALIFORNIA

The gold output of California (in terms of recovered metal) in 1940 again exceeded that of the Philippine Islands, Alaska, and South Dakota, the other leading domestic producers in order of production, according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. The quantity of recoverable gold produced in 1940 was greater than that for any year since 1862, and its value was greater than that for any year since 1856. California lode-gold production declined in 1940 compared with 1939, but the value of placer output for 1940 exceeded that for any year since 1862.

The output of recoverable gold from California ores, gravels, and re-treated tailings in 1940 was 1,455,671 fine ounces valued at $50,948,485 compared with a production of 1,435,264 ounces valued at $50,234,240 in 1939; the increase in both quantity and value was 1 percent. In 1940 1,030 lode mines produced 750,719 ounces of gold

valued at $26,275,165, and 836 placer mines produced 704,952 ounces of gold valued at $24,673,320. Lode mines supplied 52 percent and placer mines 48 percent of the total in 1940 compared with 56 percent for lode mines and 44 percent for placer mines in 1939. Of the gold derived from lode operations, 95 percent was recovered from dry gold ore, almost 3 percent from dry gold-silver ore, 2 percent from copper ore, and most of the remainder from lead ore. The importance of free-milling gold ore in California is indicated by metallurgical data, which show that 45 percent of the lode gold in 1940 (43 percent in 1939) was recovered by amalgamation; cyanidation of sands, slimes, old tailings, and concentrates represented 32 percent (32 percent in 1939 also); smelting of concentrates, 22 percent (24 percent in 1939); and smelting of ore, 1 percent (1 percent in 1939 also).

Dredging was the leading method of working placer deposits, both as to the yardage of gravel treated and the quantity of placer gold recovered. Floating dredges of the connected-bucket type handled 132,461,000 cubic yards of gravel and recovered 414,966 ounces of gold valued at $14,523,810 or 59 percent of the placer gold produced in the State in 1940. Dragline dredges (those having a floating washing plant to which gravel is delivered by a dragline excavator) handled 42,747,000 yards of gravel, which yielded 205,181 ounces of gold valued at $7,181,335. Nonfloating washing plants to which gravel was delivered by mechanical means treated 5,908,000 yards of gravel and recovered 28,232 ounces of gold valued at $988,120. Hydraulic mines produced 12,059 ounces of gold valued at $422,065 derived from 2,401,000 yards of gravel; 88,000 yards of gravel from drift mines were treated, from which 5,045 ounces of gold valued at $176,575 were recovered. Small-scale, hand-operated equipment, including small sluice boxes, long toms, dip boxes, rockers, pans, and dry washers, was used in the production of 39,321 ounces of gold valued at $1,376,235. Increases in 1940 compared with 1939 were recorded from all sources except drift mines and nonfloating washing plants.

Nevada County, because of the productivity of its Grass Valley-Nevada City district, continued to be the leading gold-producing county of the State. Despite a 2-percent decline in gold output, the county yielded 22 percent of the State's total gold and 40 percent of the State's lode gold in 1940. The high rank in gold production of Sacramento, Yuba, Butte, Siskiyou, Merced, Trinity, and Stanislaus Counties was attained largely from the output of placer gold, the product of dredges, both connected-bucket and dragline. Amador, Calaveras, Eldorado, and Mariposa Counties on the Mother Lode were important gold producers. Large gold outputs were also recorded for Kern, Placer, Plumas, and Shasta Counties.

The principal gold-producing mines in California in 1940, listed by operators and in order of output, were the Idaho Maryland Mines Corporation, Nevada County (gold ore); Empire Star Mines Co., Ltd., Nevada County (gold ore); Natomas Co., Sacramento County (dredge); Yuba Consolidated Gold Fields (Yuba unit), Yuba County (dredge); Lava Cap Gold Mining Corporation, Nevada County (gold ore); Yuba Consolidated Gold Fields (Butte unit), Butte County (dredge); Central Eureka Mining Co., Amador County (gold ore); Capital Dredging Co., Sacramento County (dredge); Carson Hill Gold Mining Corporation, Calaveras County (gold ore); and St. Joseph Lead Co., Calaveras County (gold ore).

Output of silver from California ores, gravels, and re-treated tailings in 1940 was 2,359,776 fine ounces valued at $1,678,063 compared with a production of 2,599,139 ounces valued at $1,764,264 in 1939. Of the lode silver, 52 percent was derived from dry gold ore, 26 percent from dry gold-silver ore, 13 percent from copper ore, almost 5 percent from dry silver ore, 4 percent from lead ore, and the remainder from other base-metal ores and tungsten ore. A small quantity of silver was recovered as a byproduct of gold dredging. Smelting of flotation concentrates accounted for 47 percent of the lode silver recovered in the State; 36 percent was recovered by cyanidation of ore, old tailings, sands, slimes, and concentrates; 12 percent by direct smelting; 4 percent by amalgamation of ore and old tailings; and 1 percent by the smelting of gravity concentrates.

The principal silver-producing mines in California in 1940, listed by operators and in order of output, were the Cactus Mines Co., Kern County (gold-silver ore); Lava Cap Gold Mining Corporation, Nevada County (gold ore); Walker Mining Co., Plumas County (copper ore); Golden Queen Mining Co., Kern County (gold ore); Lodestar Mining Co., Kern County (gold ore); and Graham Loftus Oil Corporation, Napa County (gold-silver ore).

CENTRAL STATES

The only output of gold from mines in the Central States in 1940 was 5 ounces of placer gold recovered in Vigo County, Ind., according to A. J. Martin, of the United States Department of the Interior, Bureau of Mines. Production of silver in the Central States during the year totaled 353,737 ounces, an increase of 37,784 ounces over 1939. The output of Illinois in 1940 (4,766 ounces) came from galena concentrates recovered in milling zinc-lead ore and fluorspar, that of Missouri (260,314 ounces) from the refining of lead bullion, and that of Michigan (88,657 ounces) from copper ore. Mines in the other Central States yielded no recoverable silver in 1940.

COLORADO

Production of gold in Colorado in 1940 totaled 367,336 fine ounces valued at $12,856,760, in terms of recovered metals, and represented no appreciable change from 1939, according to Charles W. Henderson and A. J. Martin, of the United States Department of the Interior, Bureau of Mines. Of all the metals produced in Colorado in 1940, gold was surpassed in value by molybdenum only. The principal gold-producing districts, in 1940, in order of output were: Cripple Creek, Teller County; Red Cliff, Eagle County; Mosquito, Park County; Upper San Miguel, San Miguel County; Empire and Idaho Springs, Clear Creek County; Gold Hill, Boulder County; Animas, San Juan County; Summitville, Rio Grande County; and Sneffels, Ouray County. Notable increases in gold production were made in Eagle, Boulder, and Clear Creek Counties; the largest decreases were in Teller, Park, and San Miguel Counties. In Eagle County increased production of gold was due directly to increased operation of the "Eagle mine" of the New Jersey Zinc Co., Empire Zinc Division, at Gilman, near Red Cliff; in Boulder County increased production of gold was due to significant gains in production from the larger mines in the Gold Hill, Central, and Sugar Loaf districts; and in Clear Creek

County a general increase of all the larger producing mines accounted for the larger gold production in 1940. Further suspension of mining in the lower levels of the Ajax and Cresson mines pending completion of the Carlton drainage tunnel was largely responsible for the decreased gold production from Teller County; slackening of operations at the properties of the London Mines & Milling Co., on London Mountain in the Mosquito district, affected production in Park County; and in San Miguel County a slight slackening of operations at the property of Alta Mines, Inc., and a slight decrease in the grade of ore from the Smuggler-Union group and other adjacent properties of the Veta Mines, Inc., explained a smaller gold production in 1940.

Silver production in Colorado in 1940, totaling 9,710,709 fine ounces, in terms of recovered metal, was the highest on record since 1907. Eagle County contributed 70 percent of the output, Mineral County 9 percent, San Miguel County 5 percent, San Juan County 4 percent, and other counties 12 percent. The principal producers were the "Eagle mine" group, Eagle County; Amethyst-Commodore-Last Chance-New York group, and others, Mineral County; Smuggler-Union group, San Miguel County; and the Shenandoah-Dives-Mayflower group, San Juan County.

There were 691 lode mines and 439 placer mines operated during 1940 compared with 758 lode mines and 583 placer mines in 1939. This decrease in the number of mines operated in 1940 did not materially affect the general rate of mining as virtually none of the large producing mines discontinued operations, but rather on the whole they increased production; this is shown by the increased amount of ore sold or treated. In 1940, 2,157,765 short tons of ore were sold or treated, an increase of 13 percent over the 1,914,593 tons sold or treated in 1939. Of the total ore sold or treated in Colorado in 1940, 1,528,737 tons were dry and siliceous ores, which yielded 82 percent of the gold and 19 percent of the silver; 334,312 tons were copper ore, which yielded 8 percent of the gold and 70 percent of the silver; and 294,716 tons were lead, lead-copper, zinc, or zinc-lead ores, which yielded 5 percent of the gold and 11 percent of the silver. Placer operations yielded the remaining 5 percent of the total gold and a small quantity of silver.

In 1940, five counties supplied 96 percent of the total Colorado placer gold produced; these were, in order of production, Park, Gilpin, Lake, Summit, and Chaffee. Of interest in connection with placer-mining operations is the construction by the South Platte Dredging Co. in Park County of a steel floating connected-bucket dredge that will handle 10,000 cubic yards of gravel a day; dredging is expected to start in 1941.

The total production of gold and silver in Colorado, in terms of recovered metals, compiled from all sources by Charles W. Henderson, from 1858 to 1940, inclusive, has been 37,916,726 ounces of gold and 710,648,867 ounces of silver.

EASTERN AND APPALACHIAN STATES

The mine production of gold in the Eastern and Appalachian States in 1940 totaled 18,456 fine ounces valued at $645,960, an increase of 6 percent over 1939, according to A. J. Martin, of the United States Department of the Interior, Bureau of Mines. The Haile gold mine in

Lancaster County, S. C., was the principal producer, followed by the Cornwall magnetite-pyrite-chalcopyrite mine in Lebanon County, Pa., and the Condor (old Howie) gold mine in Union County, N. C. The total number of gold-producing mines in 1940 was 47, of which 29 were lode and 18 were placer mines. Lode mines yielded 18,004 ounces of gold and placers 452 ounces.

South Carolina contributed 71 percent of the total gold produced in the Eastern and Appalachian States in 1940; the State output was 13,076 ounces, of which 12,861 ounces came from the Haile mine near Kershaw, which was equipped with a 400-ton cyanide mill. Other producers included the Brewer placer mine and the Kirkley lode mine in Chesterfield County and the Dorothy and Terry lode mines in York County. North Carolina's output of gold increased from 495 ounces in 1939 to 1,943 in 1940. The increase was due to the reopening of the Condor (old Howie) mine near Waxhaw, Union County, which was in production from September 1 through December; the ore was treated by cyanidation in the Capps mill near Charlotte. The Fontana copper mine in Swain County and gold mines in Burke, Caldwell, Franklin, Gaston, Halifax, Mecklenburg, and Rutherford Counties yielded small quantities of gold during the year. Pennsylvania produced 1,840 ounces of gold, all as a byproduct of magnetite-pyrite-chalcopyrite ore from the Cornwall mine in Lebanon County. Mines in Georgia yielded 961 ounces of gold, of which 533 ounces came from lode mines and 428 ounces from placers. The principal lode-gold producers were the Hamilton mine in McDuffie County, the Lockhart in Lumpkin County, and the Magruder in Lincoln County; the largest producers from placers were the Ferey Mining Co., Dixie Gravel Co., and Loud Gold Mines, all in White County. Other States producing gold in 1940 were Virginia (458 ounces), mostly from the Redbank mine near Virgilina, Halifax County; Tennessee (173 ounces), all recovered from the refining of copper bullion from the smelter at Copperhill; and Alabama (5 ounces), from Talladega County.

Dry and siliceous ore treated at gold and silver mills aggregated 144,726 tons, of which 134,096 tons were treated by cyanidation and yielded 14,655 fine ounces of gold, and 10,630 tons by amalgamation only or by amalgamation and flotation and yielded 932 fine ounces of gold in bullion and 144 ounces in concentrates shipped to smelters. Gold ore shipped crude to smelters totaled 151 tons containing 158 ounces of gold.

The mine output of silver in the Eastern States in 1940 was 102,825 ounces compared with 94,083 in 1939. Of the 1940 output, copper ore from Tennessee yielded 38,081 ounces, copper concentrates from North Carolina 5,222 ounces, copper concentrates from Pennsylvania 13,064 ounces, lead concentrates from zinc-lead ore from New York 35,720 ounces, and lead concentrates from lead ore from Tennessee 529 ounces. Siliceous ores, mainly from South Carolina and North Carolina, yielded 10,179 and placer gravels 30 ounces of silver.

IDAHO

The output of recoverable gold, silver, copper, lead, and zinc from mines in Idaho in 1940 was valued at $37,744,393 compared with $29,794,144 in 1939, an increase of $7,950,249 (nearly 27 percent), according to G. E. Woodward and Paul Luff, of the United States Department of the Interior, Bureau of Mines. The quantity and

value of each of the five metals were greater in 1940 than in 1939. The output of gold increased 26 percent, silver 2 percent, copper 33 percent, lead 15 percent, and zinc 48 percent. The output of gold, silver, copper, lead, and zinc in the Coeur d'Alene region, the most important metal-producing area in Idaho, was greater in 1940 than in 1939, and the total value of the metal output increased from $22,805,024 to $29,444,265.

Production of recoverable gold increased from 116,662 ounces valued at $4,083,170 to 146,480 ounces valued at $5,126,800 in 1940, or 26 percent; the gold output in 1940 was the largest since 1871, when 212,850 ounces were produced. Gold from lode mines increased nearly 27 percent to 86,071 ounces and that from placers 24 percent to 60,409 ounces. Most of the gold from placer mines came from 12 connected-bucket dredges operating in Boise, Clearwater, Custer, Idaho, Latah, and Lemhi Counties; these dredges treated 7,941,853 cubic yards of gravel in 1940 and recovered 41,262 ounces of gold, an increase of 12,289 ounces over 1939. Twenty-two dragline or power-shovel excavators with either dry-land or floating washing plants (operating chiefly in Idaho, Owyhee, Shoshone, and Lemhi Counties) treated 1,997,921 cubic yards of gravel in 1940 and recovered 12,192 ounces of gold, a decrease of 1,859 ounces from 1939. Of the total placer gold produced in Idaho in 1940, 82 percent came from the Boise Basin, Warren, Elk City, Pierce, Hoodoo, Orogrande, Beaver, and Carson districts, where dredges were operated. The chief producers were Fisher-Baumhoff Co., Warren Dredging Co., Idaho-Canadian Dredging Co., Quartz Creek Dredging Co., Northwest Goldfields, Inc., H. & H. Mines, Mt. Vernon Gold Mining Co., and American River Mining Co.

About 86 percent of the total gold from lode mines came from dry and siliceous ore (chiefly gold ore), and nearly all the remainder came from zinc-lead ore. Dry and siliceous ores treated at amalgamation and cyanidation mills increased from 121,898 tons in 1939 to 142,457 in 1940; the 1940 tonnage yielded 35,817 ounces of gold (in bullion and concentrates) which came chiefly from Elmore, Idaho, Custer, Lemhi, Boise, and Blaine Counties. Ore treated at straight concentration plants yielded 41,770 ounces of gold in the concentrates, and crude ore shipped direct to smelters yielded 8,484 ounces. About 81 percent of the lode gold came from the Middle Boise, Yellow Pine, Warm Springs, Burgdorf-Marshall Lake, Carson, Mineral Hill, Ten Mile, Yankee Fork, and Boise Basin districts and the Coeur d'Alene region. The chief producers were the Boise-Rochester-Monarch, Yellow Pine, Triumph, Golden Anchor, De Lamar Milling Corporation, and Grunter properties.

The total production of gold in Idaho in terms of recovered metal, from 1863 to 1940, inclusive, has been 7,479,342 ounces.

The output of recoverable silver in Idaho increased from 17,222,370 ounces in 1939 to 17,552,240 in 1940 and the value from $11,690,336 to $12,481,593. Idaho retained its position as the largest silver-producing State. Dry and siliceous silver ore yielded 61 percent of the total silver produced in Idaho in 1940, zinc-lead ore nearly 31 percent, lead ore 5 percent, and gold-silver ore and gold ore 3 percent. Production of silver from silver ore decreased 453,502 ounces in 1940 and that from gold-silver ore 458,742 ounces, but the output from zinc-lead ore increased 1,146,092 ounces, from gold ore 57,946 ounces,

and from lead ore 42,448 ounces. The output of silver from the Sunshine mine declined more than 1,200,000 ounces in 1940; however, the mine retained its position as the largest producer of silver in the United States. The Coeur d'Alene region produced 89 percent of the State total silver in 1940; the remainder came chiefly from the Warm Springs, Bayhorse, Carson, Port Hill, Pend d'Oreille, Middle Boise, Blue Wing, and Boise Basin districts. Eight mines—the Sunshine, Bunker Hill & Sullivan, Morning, Polaris, Hecla, Mineral Point, Triumph, and Page—produced 86 percent of the State silver output in 1940. All these mines except the Triumph are in the Coeur d'Alene region, Shoshone County.

The total production of silver in Idaho, in terms of recovered metal, from 1863 to 1940, inclusive, has been 452,902,547 ounces.

MONTANA

The output of recoverable gold, silver, copper, lead, and zinc from Montana mines in 1940 was $55,825,078, a 36-percent gain over 1939, according to G. E. Woodward and Paul Luff, of the United States Department of the Interior, Bureau of Mines. Although there were substantial gains both in quantity and value of each of the five metals, the greatest advances were in copper, zinc, and silver, the value of each rising more than $2,000,000. Metal production in Silver Bow County, by far the most productive area in Montana, was valued at $40,871,719 in 1940, a 48-percent gain over 1939, caused by the high rate of operations at the copper mines and zinc mines of the Anaconda Copper Mining Co. at Butte. There was a decrease in the output of gold but a gain in that of silver from siliceous ores; the decline in gold output from lode mines, however, was more than offset by gains at placer mines.

The production of recoverable gold was 272,602 fine ounces in 1940 compared with 264,173 ounces in 1939—a gain of 3 percent. This output was the largest since 1887, when 289, 212 ounces were produced. In 1940, lode mines yielded 76 percent and placers 24 percent of the State total gold; the output from lode mines decreased 719 ounces, but that from placer gravels increased 9,148 ounces. Siliceous ores yielded 66 percent and base-metal ores 10 percent of the total gold. There was a decrease from siliceous ore but increases from copper, lead, and zinc-lead ores. Gold ore mined in 1940 totaled 803,173 tons compared with 815,949 tons in 1939; 555,214 tons were treated in amalgamation and cyanidation mills and 171,650 tons in concentrating mills, and 76,309 tons were shipped crude to smelters. Ore treated at amalgamation and cyanidation plants yielded 32 percent of the State total gold, that treated at concentrating mills 18 percent, and ores of all classes shipped crude to smelters 26 percent. Placer gravels yielded 9,148 fine ounces more gold in 1940 than in 1939. Seven connected-bucket floating dredges were in operation in 1940; they treated 9,280,898 cubic yards of gravel and recovered 39,012 fine ounces of gold. The gold was valued at $1,365,420, indicating an average recoverable gold value of 14.7 cents per cubic yard treated. Dragline and power shovels with both dry-land and floating washing plants were reported in operation at 32 properties. The plants washed 4,761,812 cubic yards of gravel and recovered gold valued at $794,185, indicating an average recoverable gold value of 16.7 cents to the cubic yard washed. Gains were noted in the output of recovered gold from

Broadwater, Silver Bow, Park, Granite, Madison, and Beaverhead Counties, but losses in output were reported from Philips, Deer Lodge, Lewis and Clark, and Jefferson Counties. The leading producer of gold in Montana was again the West Mayflower property in Madison County, which was operated by the Anaconda Copper Mining Co. It was followed by the Winston dredge, operating on Prickly Pear Creek near Clancey; all the company-operated copper mines of the Anaconda Copper Co. at Butte; the Ohio Keating mine in Broadwater County; the Jardine mine in Park County; the Ruby Gulch mint at Zortman; the Golden Messenger mine in Lewis and Clark County; the Perry-Schroeder dredge, also in Lewis and Clark County; the Highlands group in Silver Bow County; and the Porter Bros. dredge near Helena.

The total production of gold in Montana, in terms of recovered metal, from 1862 to 1940, inclusive, has been 16,434,043 ounces.

The output of recoverable silver in Montana in 1940 was 12,361,050 fine ounces compared with 9,087,571 ounces in 1939, a gain of 36 percent, which came mostly from the zinc-lead and copper ores of the Butte district in Silver Bow County, although siliceous ores also showed gains. Copper ores yielded 49 percent of the State total silver, zinc-lead ore 25 percent, and siliceous ore 24 percent. Production of silver from Silver Bow, Beaverhead, Cascade, and Flathead Counties increased. Ores treated at concentration mills yielded 79 percent of the total silver and crude smelting ores 19 percent. The output of silver ore was 104,812 tons (a 41-percent decrease from 1939) and gold-silver ore 120,538 tons (a 117-percent gain).

The total production of silver in Montana, in terms of recovered metal, from 1862 to 1940, inclusive, has been 700,815,985 ounces.

NEVADA

In 1940 Nevada gold production (in terms of recovered metal) was the largest since 1916 in quantity and since 1912 in value, and silver output in 1940 was the largest since 1928 in quantity and 1937 in value, according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. The recoverable output of gold from Nevada ores, re-treated tailings, and gravels in 1940 was 383,933 fine ounces valued at $13,437,655 compared with 361,518 ounces valued at $12,653,130 in 1939, an increase of 6 percent in quantity and value. Production of recoverable silver in 1940 was 5,175,928 fine ounces valued at $3,680,660 compared with 4,316,029 ounces valued at $2,929,668 in 1939, an increase of 20 percent in quantity and 26 percent in value.

Gold was recovered from the following sources: Dry gold ore, 62 percent; copper ore, 16 percent; dry gold-silver ore, 10 percent; placer gravels, 10 percent; and other ores, 2 percent. Metallurgical data show that 58 percent of the State lode gold was recovered by cyanidation, 20 percent by the smelting of concentrates, 15 percent by the smelting of ore, and 7 percent by amalgamation. Cyanidation and smelting of ore as gold recovery methods were more important in 1940 than in 1939; the proportion of gold recovered by smelting of concentrates and by amalgamation declined.

The principal Nevada gold mines, listed by operating companies and in order of output, were Getchell Mine, Inc., Humboldt County (gold ore); Consolidated Coppermines Corporation, White Pine County

(copper ore); Nevada Consolidated Copper Corporation, White Pine County (copper ore); Manhattan Gold Dredging Co., Nye County (dredge); Black Mammoth Consolidated Mining Co., Esmeralda County (gold ore); Dayton Consolidated Mines Co. and lessees, Storey County (gold ore); Northumberland Mining Co., Nye County (gold ore); Standard Cyaniding Co., Pershing County (gold ore); Consolidated Chollar Gould & Savage Mining Co., Storey County (gold ore); and Silver Hill Mining Co., Storey County (gold ore).

Nevada silver was recovered from the following sources in 1940: Dry gold-silver ore, 37 percent; dry silver ore, 25 percent; zinc-lead ore, 14 percent; dry gold ore, 13 percent; copper ore, 7 percent; and lead ore, placer gravel, lead-copper ore, and zinc ore the remainder. Cyanidation of ore, old tailings, sands, slimes, and concentrates accounted for 41 percent of the lode silver produced in Nevada in 1940; 36 percent was recovered by smelting of ore and old tailings, 22 percent by the smelting of concentrates, and the remainder by amalgamation.

The principal silver mines in Nevada in 1940, listed by operating companies and in order of output, were the Desert Silver, Inc., Esmeralda County (silver ore); Combined Metals Reduction Co., Lincoln County (zinc-lead ore and gold-silver ore); lessees of the Tonopah Mining Co. of Nevada, Nye County (gold-silver ore); Summit King Mines, Ltd., Churchill County (gold-silver ore); Rip Van Winkle Mining Co., Elko County (zinc-lead ore); El Dorado Rover Mining Co., Clark County (gold-silver ore); Sutro Tunnel Coalition, Inc., Storey County (gold-silver ore); Consolidated Chollar Gould & Savage Mining Co., Storey County (gold ore); Bristol Silver Mines Co., Lincoln County (copper ore); and Diamond Gold Mining Co., Clark County (gold-silver ore).

NEW MEXICO

The production of gold from mines in New Mexico, in terms of recovered metal, totaled 35,943 fine ounces in 1940, a 3-percent decrease from 1939, according to Charles W. Henderson and A. J. Martin, of the United States Department of the Interior, Bureau of Mines. The principal gold-producing districts of New Mexico were: Mogollon, Catron County; Central, Grant County; Steeple Rock, Grant County; San Pedro, Santa Fe County; Las Animas, Sierra County; and Lordsburg, Hidalgo County. Dry and siliceous ores yielded 53 percent, copper ore 37 percent, lead and zinc-lead ores 2 percent, and placers 8 percent of the State total gold in 1940.

Silver production in New Mexico in 1940, in terms of recovered metal, totaled 1,407,839 fine ounces, only a slight increase over 1939. The principal silver-producing districts were: Mogollon, Catron County; Central, Grant County; Steeple Rock, Grant County; Lordsburg, Hidalgo County; and San Pedro, Santa Fe County. Dry and siliceous ores yielded 57 percent, copper ore 26 percent, zinc-lead ore 16 percent, and lead ore (together with a small quantity from placers), 1 percent of the State total silver.

In the Central district of Grant County, the Nevada Consolidated Copper Corporation, operating the open-pit Chino mine at Santa Rita and a mill and new reverberatory copper smelter (first blown in early in May 1939) at Hurley, greatly increased its output in 1940. Increased production of byproduct gold and silver from this mine aided materially in maintaining the total 1940 gold production of the

State to within 3 percent of that for 1939 and offset the loss of production resulting from the closing of the Pecos mine at Terrero in San Miguel County on May 31, 1939.

The largest single producer of both gold and silver in the State in 1940 was the Black Hawk Consolidated Mines Co., Mogollon district, Catron County, which operated the Little Fanney cyanide mill and the Consolidated group (comprising the Andrew Jackson Consolidated, Lexington Contention, and Lexington Gunboat claims on the Queen vein) under lease from the Lehigh Metals Co. Company and custom ore treated in 1940 totaled 68,549 tons, from which 9,336 fine ounces of gold and 536,350 fine ounces of silver were recovered.

The third-ranking gold producer in the State, following the Nevada Consolidated Copper Corporation, was the East Camp group operated by The Exploration Syndicate, Inc. (formerly East Camp Exploration Syndicate, a partnership), Steeple Rock district, Grant County. The East Camp group produced 3,294 fine ounces of gold and 185,485 fine ounces of silver in 1940.

The total production of gold and silver in New Mexico, in terms of recovered metals, compiled from all sources by Charles W. Henderson, from 1848 to 1940, inclusive, has been 2,120,935 ounces of gold and 63,948,259 ounces of silver.

OREGON

The quantity of gold produced in Oregon in 1940 (in terms of recoverable metal) was 21 percent greater than in 1939, and its value was the largest in the history of the State, according to Charles White Merrill, of the United States Department of the Interior, Bureau of Mines. The output of gold from Oregon ores, gravels, and re-treated tailings in 1940 was 113,402 fine ounces valued at $3,969,070 compared with 93,372 ounces valued at $3,268,020 in 1939. Placer mines produced 63 percent of the gold and lode mines 37 percent. Dragline dredges handled 7,361,000 cubic yards of gravel in 1940 compared with 5,964,000 yards in 1939 and recovered 35,216 ounces of gold valued at $1,232,560 in 1940 compared with 26,257 ounces of gold valued at $918,995 in 1939. Dredges of the connected-bucket type treated 7,580,000 yards of gravel in 1940 compared with 6,267,000 yards in 1939 and recovered 24,951 ounces of gold valued at $873,285 compared with 25,028 ounces of gold valued at $875,980 in 1939. Dragline dredges handled 44 percent of the gravel and recovered 49 percent of the placer gold in Oregon in 1940; connected-bucket dredges handled 45 percent of the gravel and recovered 35 percent of the placer gold. Virtually all of the lode gold was recovered from dry and siliceous gold ore; smelting of flotation concentrates accounted for the major part of the lode gold recovered.

The principal Oregon gold mines in 1940, listed by operating companies and in order of output, were Cornucopia Gold Mines, Baker County (gold ore); Sumpter Valley Dredging Co., Baker County (connected-bucket dredge); Northwest Development Co., Baker County (dragline dredge); Porter & Co., Grant County (connected-bucket dredge); and Cougar-Independence Lessees, Grant County (gold ore). These five companies contributed 45 percent of the gold output in Oregon in 1940.

Oregon ores, gravels, and re-treated tailings in 1940 yielded 219,112 fine ounces of silver valued at $155,813 compared with 105,388 ounces valued at $71,536 in 1939; the increase was 108 percent in quantity

and 118 percent in value. Of the State total silver Baker County contributed 61 percent and Grant County 26 percent; the Cornucopia mine alone accounted for 55 percent of the total.

SOUTH DAKOTA

Mines in South Dakota yielded, in terms of recovered metals, 586,662 fine ounces of gold and 175,514 fine ounces of silver in 1940, according to Charles W. Henderson, of the United States Department of the Interior, Bureau of Mines. Lode-gold mining is the principal mineral industry of South Dakota; the mineralized area is in the mountain group called the Black Hills, which is included in Custer, Lawrence, and Pennington Counties. The tonnage of ore sold or treated in 1940, totaling 1,667,370 tons, was 2 percent greater than in 1939, but the average tenor of the ore was less, resulting in gold production in 1940—5 percent less than that of the peak year 1939.

Eleven lode mines producing gold were operated in South Dakota in 1940. The largest gold producer in the State, also the largest in the United States, was the Homestake mine at Lead, Lawrence County. This mine (operated almost continuously since 1876) treated 1,433,737 tons of ore in 1940, recovering 542,216 fine ounces of gold and 120,099 fine ounces of silver. Development operations of the company during the year included 1,711 feet of shaft sinking, the driving of 29,155 feet of drifts and 12,238 feet of raises, and 46,481 feet of diamond drilling.

The Bald Mountain Mining Co. at Trojan, Lawrence County, the second-largest producer of gold and silver in South Dakota in 1940, continued to operate its consolidated group of mines and 350-ton all-sliming countercurrent-cyanidation plant, which treated 130,643 tons of ore (10 tons of high-grade ore were shipped to the Omaha smelter); the total yield was 25,849 fine ounces of gold and 50,077 fine ounces of silver. Other companies operating in 1940 included the Canyon Corporation, Frerichs Mining Co., and Gilt Edge Mines, Inc., in Lawrence County; and the Gold Mountain Mining Co., Holy Terror Mining Co., and Empire Gold Mines, Inc., in Pennington County.

Placer mining in South Dakota compared with previous years was virtually dead, with no activity other than hand operations; production in 1940 was 229 fine ounces of gold and 21 fine ounces of silver.

The total production of gold and silver in South Dakota, in terms of recovered metals, compiled from all sources by Charles W. Henderson, from 1876 to 1940, inclusive, has been 19,437,306 ounces of gold and 9,175,505 ounces of silver.

TEXAS

In 1940 the mines in Texas produced, in terms of recovered metals, 312 fine ounces of gold and 1,326,150 fine ounces of silver, according to Charles W. Henderson, of the United States Department of the Interior, Bureau of Mines. The American Metal Co. of Texas continued to operate at capacity its mine and mill at Shafter in Presidio County, producing 309 fine ounces of gold and 1,294,803 fine ounces of silver, or more than 99 percent of the State total gold and nearly 98 percent of the State silver production. Four other lode mining operations—the Hazel mine in Culberson County; and Sancho Panza Mines and Garren Lease, prospects of the Yodina Mining Co., and the Plata Verde mine, in Hudspeth County—supplied the remaining production of gold and silver in 1940 in Texas.

The total output of gold and silver in Texas (in terms of recovered metals) from the beginning of production in 1885 to 1940, inclusive, compiled by Charles W. Henderson, has been 7,735 fine ounces of gold and 31,417,729 fine ounces of silver.

UTAH

Utah mines in 1940 yielded gold, silver, copper, lead, and zinc valued at $86,585,499, a 38-percent gain over the value of 1939 production, according to G. E. Woodward and Paul Luff, of the United States Department of the Interior, Bureau of Mines. Greater production of all five metals (including an all-time high for gold and copper) was stimulated by moderately higher prices for silver and the base metals. Most of the gains in gold and copper and much of that in silver were in the Bingham district and resulted chiefly from the high rate of operations by the Utah Copper Co. The Park City region showed the greatest gain in silver and a marked gain in gold. The output of gold and silver from the Tintic district decreased.

The output of recoverable gold in 1940 was 355,494 ounces, an increase of 77,743 ounces compared with 277,751 ounces produced in 1939. Gold recovered from copper ore increased from 159,653 ounces in 1939 to 223,156 ounces in 1940, as the output of copper ore increased from 19,602,472 tons to 26,301,745. Gold from lead ore, zinc-lead ore, lead-copper ore, and zinc-lead-copper ore increased 15,766 ounces, and gold from dry and siliceous ores decreased 1,656 ounces. Copper ore yielded 63 percent of the total and siliceous ore 24 percent; the remainder was recovered from lead, lead-copper, zinc-lead, and zinc-lead-copper ores and placers. In 1940 placers yielded 275 ounces of gold. Ore of all classes treated at concentration mills yielded 74 percent of the total gold, ore shipped crude 21 percent, and ore cyanided and amalgamated and placers the remainder. The Bingham (West Mountain) district, which produced 72 percent of the State total gold, gained 66,005 ounces as a direct result of the increased output from the Utah Copper Co. There was a moderate decline in gold recovered from ore of the Tintic district because of decreases at the Centennial-Beck-Victoria group and the Eureka Standard mine. Gold recovered from ore of the Park City region nearly trebled, owing principally to a sharp increase from the New Park Mining Co. Gold recovered from ore of Tooele County gained, chiefly because of greater output from mines in the Camp Floyd district. The Utah Copper Co., which supplied more than 60 percent of the total gold production of Utah, was followed by the Con Mercur, United States & Lark, Tintic Bullion, and Mayflower mines.

The total production of gold in Utah, in terms of recovered metal, from 1864 to 1940, inclusive, has been 8,701,728 ounces.

The output of recoverable silver from Utah mines was 12,172,299 ounces in 1940 compared with 10,758,657 ounces in 1939, a gain of 13 percent. This gain is attributed to the large production of zinc-lead, zinc-lead-copper, and copper ores. Zinc-lead and zinc-lead-copper ores yielded 47 percent of the State total silver, siliceous ore 25 percent, copper ore nearly 18 percent, and lead and lead-copper ores 10 percent. The Bingham district was the largest producer (39 percent of the State total silver) followed by the Park City region, the Tintic district, and Tooele County. Concentrates yielded 67 percent of the silver output of the State and ore shipped crude to

smelters virtually all the remainder. The Utah Copper Co. was the largest producer of silver in Utah in 1940; it was followed by the United States & Lark (first in silver production in Utah in 1939), Tintic Standard, Silver King Coalition, and Park City Consolidated properties, the Judge group of the Park Utah Consolidated Mines Co., the Mayflower tunnel of the New Park Mining Co., and the Chief Consolidated property. These eight properties produced 76 percent of the silver output of Utah in 1940.

The total production of silver in Utah, in terms of recovered metal, from 1864 to 1940, inclusive, has been 669,904,666 ounces.

WASHINGTON

The output of gold, silver, copper, lead, and zinc from mines in Washington was valued at $7,018,812 in 1940 compared with $6,739,467 in 1939, according to G. E. Woodward and Paul Luff, of the United States Department of the Interior, Bureau of Mines. The 4-percent increase in total value resulted from greater output of copper and zinc which was stimulated by moderately higher prices. More than half of the gold and silver and about 97 percent of the copper was mined from the Holden property of the Howe Sound Co.

The output of recoverable gold declined 9 percent—from 90,420 ounces valued at $3,164,700 in 1939 to 82,136 ounces valued at $2,874,760 in 1940—due mostly to a smaller tonnage of gold ore cyanided principally in Ferry and Whatcom Counties and a sharp decrease in gold ore shipped crude to smelters, chiefly in Ferry and Okanogan Counties. Gold from dry and siliceous gold ore declined 12,297 ounces but that from copper ore increased 3,465 ounces in 1940. Ore treated at straight concentration mills increased from 864,151 tons in 1939 to 972,848 tons in 1940 and yielded 65 percent of the total gold produced in 1940; ore to amalgamation and cyanidation mills declined to 147,000 tons (from 167,972 tons in 1939) and yielded 16 percent of the gold; crude ore shipped direct to smelters (92,441 tons in 1939 compared with 46,950 tons in 1940) yielded 16 percent, and placers 3 percent. Most of the placer output came from operations on the Columbia River, Stevens County, and from the Swauk district, Kittitas County. The Howe Sound Co., in Chelan County, was by far the largest gold producer in Washington in 1940, followed by the Aurum, Knob Hill, Mountain Lion, and Republic properties in Ferry County; the Alder property in Okanogan County; and the Orient property in Stevens County.

The total production of gold in Washington, in terms of recovered metal, from 1860 to 1940, inclusive, has been 1,797,549 ounces.

The output of recoverable silver in Washington decreased from 442,063 ounces valued at $300,067 in 1939 to 365,175 ounces valued at $259,680 in 1940. The Howe Sound Co. continued to be the largest producer of silver in the State, its output increasing from 181,777 ounces in 1939 to 199,175 ounces in 1940. Silver from Ferry County declined 49,091 ounces in 1940; silver from Okanogan and Stevens Counties also declined. Copper ore yielded 60 percent of the State total silver, gold ore 31 percent, and silver ore 5 percent. Ore treated at straight concentration plants yielded 65 percent of the silver and ore smelted 22 percent. In addition to the Howe Sound Co., important silver producers in Washington in 1940 included the Aurum, Knob Hill, and Mountain Lion properties in Ferry County, and the Amazon and Copper King property in Stevens County.

The total production of silver in Washington, in terms of recovered metal, from 1860 to 1940, inclusive, has been 10,820,860 ounces.

WYOMING

Wyoming mines (lode and placer) produced, in 1940, in terms of recovered metals, 740 fine ounces of gold and 114 fine ounces of silver, an increase of 157 ounces of gold and 39 ounces of silver over 1939, according to Charles W. Henderson, of the United States Department of the Interior, Bureau of Mines. Operations worthy of mention were a dragline dry-land dredge operated by the E. T. Fisher Co. and a dragline dry-land dredge operated by John E. Whisenand, both in the Atlantic City district, Fremont County.

Twenty-eight placer mining operations produced 722 fine ounces of gold and 73 fine ounces of silver, and nine lode mining operations produced the remaining 18 ounces of gold and 41 ounces of silver. Of the total, the Atlantic City district in Fremont County produced 86 percent of the placer gold and silver and 44 percent of the lode gold; other counties contributing were Albany, Big Horn, Carbon, Laramie, Park, Platte, Sheridan, and Teton.

The total production of gold and silver in Wyoming, in terms of recovered metals, from 1867 to 1940, inclusive, according to Charles W. Henderson, has been 77,413 fine ounces of gold and 74,486 fine ounces of silver.

Distribution of the gold and silver production of the United States, in fine ounces, for 1940, as to sources of production

[Table furnished by the Bureau of Mines]

State	Gold			Silver		
		Placer mines				
	Lode mines	Floating connected-bucket dredges	All other	Dry and siliceous ores [1]	Lead ores [2]	Copper ores
	Ounces	*Ounces*	*Ounces*	*Ounces*	*Ounces*	*Ounces*
Alabama	5			3		
Alaska	214,097	354,806	187,067	191,679

Total [6]	3,358,480	904,149	607,320	29,241,659	20,520,297	20,787,406

[1] Includes small quantity of silver from placer mines (200,070 ounces).
[2] Includes silver in lead, lead-copper, zinc, zinc-lead, zinc-copper, and zinc-lead-copper ores.
[3] Includes silver in zinc-lead-copper ore from 1 mine in Utah; in zinc-copper ore from Arizona.
[4] Includes 713 ounces of silver from galena concentrates, a byproduct of fluorspar mining.
[5] From copper concentrates from magnetite-pyrite-chalcopyrite ore.
[6] Philippine Islands and Puerto Rico excluded. United States refineries' receipts for the Philippine Islands give the following production for 1940: 1,114,201 ounces of gold and 1,275,383 ounces of silver; for Puerto Rico 13 ounces of gold and 1 ounce of silver.

Refinery production (arrivals thereat) of gold mined in the several States and Territories in 1939 and 1940 with the increase and decrease in each for the latter year

[1] Value of gold in 1934 and thereafter calculated on basis of $35 per fine ounce; prior thereto on basis of $20.67+ per fine ounce.

[2] Value of silver calculated on the basis of the average amount per ounce returned to depositors of newly mined domestic silver; in 1934 at $0.64+ per fine ounce, in 1935 at $0.71875, in 1936 at $0.7745, in 1937 at $0.7735.

[3] Value of silver calculated on the basis of the amount per fine ounce returned to depositors of newly mined domestic silver produced in 1938, $0.6464+, in 1939 $0.6787+, and in 1940 $0.7111+.

Gold and Silver Used in Industrial Arts in the United States During the Calendar Year 1940

Issue by the mints and assay offices of gold and silver for industrial-arts use has very substantially lessened since the monetary price of gold was fixed at $35 per fine troy ounce and a one-fourth of 1 percent charge imposed, and the supplying of industry by commercial refiners of those metals has substantially increased. Previously the principal source of gold supply to industry was the mint service institutions.

The following table gives the value of the gold and the quantity of the silver bars issued by the Government institutions and private refineries during the calendar year 1940, with the classes of material from which they were made.

Gold and silver issued for use in the industrial arts during the calendar year 1940

Item	Issued by—	Gold	Silver
		Value	*Fine ounces*
Bullion	Mints and assay offices	$241,057	545,756
Bullion in various forms	Private refiners and dealers	40,937,330	66,439,532
United States coin [2]	Banks, etc.		77,344
Total		41,178,387	67,062,632
Old jewelry, plate, scrap, etc., contained in private refineries and dealers' returns, and that returned to monetary use.		27,872,355	22,563,729
Net new material used in industry		13,306,032	44,498,903

[1] For explanation of calculation see p. 48.
[2] Estimated; the quantity of silver is equal to 100,000 silver dollars.

Gold and silver furnished for use in manufactures and the arts, and classification of the materials used, since 1880

[1] Value of gold in 1934 and thereafter calculated on basis of $35 per fine ounce; prior thereto on basis of $20.67+ per fine ounce.

[2] Treated as having priority as regards issue or reissue.

Mint Issue of Fine Gold Bars for Industrial Use

[On value basis: see p. 48]

The value of the fine gold bars issued for industrial use, in exchange for cash, by the United States Mints at Philadelphia, San Francisco, and Denver, and the assay office at New York, during the calendar year 1940, was as follows:

Month	Value of bars issued	Month	Value of bars issued
1940:		1940—Continued.	
January	$27,655.72	September	$13,108.35
February	22,133.99	October	13,904.69
March	31,683.94	November	23,928.83
April	15,679.55	December	17,768.01
May	22,682.92		
June	23,711.03	Total	241,056.78
July	13,619.55		
August	15,180.20	Prior calendar year	316,376.99

Domestic Coinage of the United States Mints During the Calendar Year 1940

Denomination	Philadelphia Mint	San Francisco Mint	Denver Mint	Total value	Total pieces

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

ADDENDA TO REPORT OF THE DIRECTOR OF THE MINT

Bases Used for Mint Service Statistics

Gold and silver, as well as minor coinage metals, are accounted for by quantity as well as by value. Most of the published mint service statistics pertaining to such metals are on a primary quantity basis rather than a primary value basis because, in some degree, the value factor antedates the quantity factor, as when advance partial payments are made on large deposits of bullion or foreign coin pending determination by melt, assay, and computation, of the exact quantities and values of the materials deposited. The *quantity basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also melted coin that has been reviewed and classified after having been received as withdrawn from monetary use. The *value basis* comprises received bullion, the quantity and value whereof have been finally determined, whether or not paid for; also received bullion to the value of advance payments thereon prior to making final determinations; and received but unreviewed coin that has been withdrawn from monetary use. To effect reconciliation between the quantity basis and value basis, from period to period, would require consideration also of prior period advances.

The tabulations of "Deposits and purchases" include received metal for which payment is made in bars bearing the Government stamp, as well as that paid for by check or in cash. In these tabulations, prior to the fiscal year 1940, the receipt classification item of "Domestic refinery bullion" included that refined from new production of both domestic and foreign mines, also old or secondary source metals, with inconsiderable amounts from small refineries that worked only old materials. Beginning with the fiscal year 1940 segregation of these items has been made in the tabulations.

Gold and silver production estimates.—These estimates consist of arrivals at United States mints and assay offices and at privately owned refineries (bullion-producing plants), of gold and silver from mines within the States and Territories of the United States, including the production of the Philippine Islands which comes to the United States for reduction. The portion of this figure representing mint receipts is on the quantity basis.

Gold and silver consumption in industry.—These estimates comprise bar sales by the mints and assay offices for industrial use (partly estimated) plus similar items issued by private refiners, dealers (and manufacturers), as reported to the Mint Bureau, plus an estimate of domestic coin melted for industrial use; from the total of these is deducted the old jewelry, plate, scrap, etc., received by the same concerns, giving net new materials consumed.

Stock of domestic coin.—Consists of an estimate made in 1873 of gold and silver coin, the former of which was revised in 1907, with annual addition of new coinage and reported imports, and deduction of withdrawn coin, reported exports, and an estimate for industrial use; from 1928 to 1933 the additional factor of gold coin "earmarked," or set aside for foreign owners, was considered, such transactions being equivalent to exports and releases thereof being equivalent to imports. After 1933 gold coin has been omitted as such; any unmelted gold coin on hand is treated as bullion. In 1928 minor coin was added, using only the 5-cent nickel and 1-cent bronze coins of the type commonly in circulation and considering only the amounts coined and those withdrawn for recoinage. The monetary stock tables for a series of years have been revised back to the establishing of the Federal Reserve System (1914) to include earmarked gold, and to include minor coin back to 1900. The item of coin withdrawn as used in the stock compilation omits the coin received for recoinage but not yet reviewed, which coin is subject to classification adjustments.

Domestic coin made.—These data cover the coin delivered from the manufacturing department to the issuing (cash) division, and include the new coin made from withdrawn old coin, as well as all other newly made coin. It is now required that all coins be delivered to the cash division during the year impressed on such coins; during the earlier years this was not always done.

[1] Coinage of domestic gold coin discontinued in 1933; sec. 5 of the Gold Reserve Act of 1934 provides in part as follows:
"No gold shall hereafter be coined, and no gold coin shall hereafter be paid out or delivered by the United States * * *. All gold coin of the United States shall be withdrawn from circulation, and, together with all other gold owned by the United States, shall be formed into bars of such weights and degrees of fineness as the Secretary of the Treasury may direct."
[2] Discontinued by act of Apr. 11, 1930.
[3] Discontinued by act of Sept. 26, 1890.

Authority for United States coinage, by denominations, with standard weight and fineness, and total coined—Continued

[9] Composed of 88 percent copper and 12 percent nickel.

United States Coins Carrying 1792 Date.

It appears that an inconsiderable number of coins bearing the date 1792, of denominations dime, half-dime, and one cent, are in the hands of coin collectors. Such coins are not included in the Mint official coinage records, which have their initiation as of 1793. Evidently they were of a preliminary, if not experimental, nature. However, the coinage system was provided for by legislation of April 2, 1792, and May 8, 1792, and historical records, including the following excerpt from President George Washington's fourth report to the Congress of the United States, appear to authenticate the issue of coins in 1792. Excerpt from President Washington's report to Congress dated November 6, 1792:

In execution of the authority given by the legislature, measures have been taken for engaging some artists from abroad to aid in the establishment of our Mint. Others have been employed at home. Provisions have been made for the requisite buildings, and these are now putting into proper condition for the purposes of the establishment. There has been a small beginning in the coinage of half dismes, the want of small coins in circulation calling the first attention to them.

Coinage of each mint, by face amount, with grand total

Denomination	Philadelphia, 1793–1940	San Francisco, 1854–1940	Denver, 1906–40
Gold:			
50 dollars		$150. 950. 00

Unexpended balance				64,978.52

[1] Includes $1,608,000 provided by the Deficiency Act of June 27, 1940, for the fiscal year 1940, to remain available until June 30, 1941. No portion of this appropriation was obligated during the fiscal year 1940, leaving the entire amount available for the fiscal year 1941. Includes also $100,000 of the unexpended balance of appropriation for transportation of bullion and coin for the fiscal year 1940, which was continued available during the fiscal year 1941 by the terms of the Treasury and Post Office Departments Appropriation Act, 1941.

[2] Chargeable as indicated below (in parentheses) to several offices.

[3] $57,164.88 chargeable special gold movement San Francisco to Denver.

[4] $1,815,156.72 chargeable special gold movement New York to Fort Knox and $20,484.56 special silver movement New York to West Point.

Cash assets and liabilities of the United States mints, assay offices, and bullion depository, June 30, 1941

Total	4,347,585	320,646	4,668,231
Estimated stock of coin in United States, June 30, 1941	994,325,676	199,364,371	1,193,690,047

[1] For method of estimating, see p. 48.

NOTE.—The number of standard silver dollars coined to June 30, 1941, was 847,629,915, which, added to the Hawaiian dollar coinage, 500,000, plus the number imported from the Philippine Islands, 150,000, and the number returned in Government transports, 496,859, equals 848,776,774. Since July 1, 1898, the number of standard silver dollars exported in transports has been 2,495,000, the net export from November 1919 to July 1920, in movement due to the high price of silver, was 28,287,142; those melted under the terms of the Pittman Act of Apr. 23, 1918, totaled 270,232,722; those melted otherwise (mutilated, etc.) since 1883 numbered 228,765, and the number of Hawaiian dollars melted to June 30, 1941, was 455,329, a total disposition of 301,698,958, leaving in the United States on June 30, 1941, 547,077,816 standard silver dollars and 447,247,860 dollars in subsidiary silver coin.

Estimated monetary stock of gold and silver in the United States and the amount per capita at the close of each fiscal year since 1873

Fiscal year ended June 30—	Population (thousands)	Gold bullion and coin (thousands)	Silver coin [1] (thousands)	Per capita

[1] For 1934 and thereafter includes silver bullion revalued to $1.29+ per fine troy ounce and set up as security against silver certificates.

[2] On Jan. 31, 1934, the weight of the gold dollar was reduced from 25.8 grains of gold nine-tenths fine to 15 5/21 grains nine-tenths fine, thereby giving gold a monetary value of $35 per fine troy ounce, which compares with the previous $20.67+ per fine troy ounce. Proclamation of Jan. 31, 1934.

On December 31, 1940, the stock of domestic coin in the United States was $1,161,241,350 as shown in the table below:

Stock of domestic coin in the United States, Dec. 31, 1940 [1]

Item	Silver	Minor	Total

[1] Data for individual years published in reports of the Director of the Mint for 1931 and for prior years.
[2] For first 10 months only: Apr. 1, 1939 to Jan. 31, 1940.

NOTE.—Net exports are shown with a prefixed minus sign. The quantities in the column "Net imports" for both gold and silver for the years 1873–74 to 1886–87 are estimated only, deducted from the declared values of the trade for those years by the following process:

For gold, the rupee value of the monthly net imports was converted into sterling at the average rate of exchange in each month, and this sterling value was then divided by the English mint price of gold (£3 17s. 10½d.). For silver the average price of 107 rupees per 100 toals, or 285.33 rupees per 100 ounces, was taken as the basis of the value of the annual imports.

Price of silver in London and in New York, 1940–41

Month	London price per ounce, 0.925 fine			Average monthly exchange, New York on London	United States equivalent, per fine ounce, of London price at current rate of exchange	Average monthly New York price of fine bar silver, per ounce (mean of bid and asked quotations)
